Reagan pledges
'healthy economy'

By Jeri-Lynn Scofield

Under sunny skies, and against a backdrop of the West Front of the Capitol bedecked with red, white, and blue bunting, Chief Justice Warren Burger of the Supreme Court administered the presidential oath to Ronald Reagan Tuesday at 11:57am.

"I, Ronald Wilson Reagan, do solemnly swear that I will faithfully execute the office of the President of the United States, and will, to the best of my ability, preserve, protect, and defend the Constitution of the United States, so help me God," declared Reagan before an estimated strong of more than 150,000 spectators.

The crowd, the largest ever to assemble to view a Presidential inauguration, was aided by the decision to conduct the ceremonies outdoors.

A large ceremony was held on the steps of the East Front of the Capitol, to the accompaniment of the National Guard Band, the U.S. Air Force, and the Marine Band.

At 11:57am, with all in the audience following, Reagan -- his arm around his wife, Nancy -- was sworn in.

Inside the fense things were orderly, almost restrained. Outside, fired by the disconsolation of exclusion and President Reagan's conservative beliefs, protesters rioted. (Photo by Kevin Osborne)

By Richard Sacle

"My fellow Americans, our long national nightmare is finally over." Although first used by then-President Gerald Ford to describe the end of Watergate, this phrase is highly applicable as a description of the hostage crisis resolution as well.

The crisis became a national obsession. For over 14 months, flags were flown at half-mast, the media recorded each day of the captivity, and obtaining the release became the paramount – if not only -- objective of US. foreign policy.

Americans have been held hostage before -- the crew of the ill-starred Pueblo was held for 11 months before their 1968 release -- but never with so much attention. A large reason was the coverage the media accorded the hostage's release until after the tragedy. The pictures of Americans held captive, the world, and heightened our obsession. For over 14 months, we waited, ready to face reality once more. Of us, America should now be able to view a Presidential inauguration.

Federal powers and responsibilities, stimulate productivity, and revitalize the economy.

Reagan also wants to maintain prestige and strength in international affairs while recognizing the world, genocide, and the need for real-ism. President Reagan promised in his brief inaugural address.

Reagan adopted a soothing tone in his delivery.

The media recorded each day of the hostage's release. On December 20, 1979, the White House had announced that a group of 52 American hostages had been freed.

But there was no panic, merely a sense of calm and comfort. The White House had prepared the American people. Inauguration ceremonies on the more spacious ceremonial grounds.

Reagan, at the Capitol, wore the same during her husband's inauguration ceremony. First Lady Barbara Bush, in electric blue, did not.

The crisis became a national obsession. For over 14 months, flags were flown at half-mast, the media recorded each day of the captivity, and obtaining the release became the paramount – if not only -- objective of US. foreign policy.

The crisis became a national obsession. For over 14 months, flags were flown at half-mast, the media recorded each day of the captivity, and obtaining the release became the paramount – if not only -- objective of US. foreign policy.

Americans have been held hostage before -- the crew of the ill-starred Pueblo was held for 11 months before their 1968 release -- but never with so much attention. A large reason was the coverage the media accorded the hostage's release until after the tragedy. The pictures of Americans held captive, the world, and heightened our obsession. For over 14 months, we waited, ready to face reality once more.

Of us, America should now be able to view a Presidential inauguration.

Reagan emphasized his intention to redefine the role of government, redefine the balance between state and Federal powers and responsibilities, stimulate productivity, and revitalize the economy.

West Front, rather than the traditional, but more confined. East Front. Instead of facing other branches of the government, as the Chief Justice of the Supreme Court and the Congressmen chose to face the West, symbolically acknowledging that region as the base of his earliest political support.

Nation
Carter visits freed American hostages in Germany—Former president Carter flew to West Berlin, Germany, yesterday to meet with the 52 freed hostages who are completing medical and psychiatric treatment before possibly returning to the US early next week. The Americans were flown from Iran after 444 days of captivity within an hour after President Reagan's inauguration in Washington on Tuesday. Preliminary reports by the freed hostages confirmed allegations of their torture and imprisonment by the Islamic militants.

State
UMass faculty reach agreement — An agreement was reached Monday by the union representing 1900 faculty members at the University of Massachusetts Boston and Amherst campuses and the administration of the University. The previous contract had expired June 30. The new agreement provides for salary increases and a method of dealing with faculty layoffs due to declining enrollment and reestablishes the work status of librarians within the University.

Weather
Increasing cloudiness during the day with a chance of some light rain showers or flurries this afternoon and evening. Temperatures will be mild with highs 36-40. For tonight, mostly cloudy and mild with a chance of a flurry. Lows 26-30. For Friday, mostly sunny and a bit cooler. Highs mild with highs 36-40. For tonight, cloudy and mild with a chance of a flurry. Lows 26-30. For Saturday, becoming drier and a bit cooler. Highs 35-39. Turning colder Friday night with lows 20-24. Chance of precipitation 10 percent late today and tonight, 10 percent tomorrow.

A CAREER IN THE CHIPS
If you're planning a career in Engineering, Finance, Marketing, or Data Processing, we know you're seriously considering the semiconductor industry. We'd like to offer a little piece of advice: Choose the company that will give you the best opportunities right away. Choose AMD.

Advanced Micro Devices started out a little over a decade ago with eight of the best people in the industry and a dream. Today, we're at the top of the integrated circuit field with 9,000 of the best—and friendliest—people. $225 million in sales, and over 800 products. We're still growing fast, with the best career opportunities to put you right in the chips with us.

On-Campus Interviews
Wednesday, February 4

Make an appointment today with your Career Planning & Placement Center. Or, for more information on AMD, call Sally Hazard TOLL FREE at (800) 538-8450. (In California, call (408) 732-2400, extension 2719.) Advanced Micro Devices, 901 Thompson Place, M/S 57, Sunnyvale, California 94086. An equal opportunity employer.

Degrees to go

There's an interesting little history behind MIT's new Master's Program for Students in Industry. According to most polite versions, the Massachusetts High Technology Council has been concerned with the problem of attracting electronic engineers to Massachusetts. Projections of their growth in the next thirty years show gaps of thousands between supply and demand of these engineers in Massachusetts by the middle of this decade. The really behind that "concerns" is that Route 128 electronics companies wasted MIT supply to attract students. Specifically, they would like to be able to offer prospective employees the opportunity to gain an MIT Master's while working for their firms. Stanford University offers this option, which attracted many engineers to the "Silicon Valley" in California, and the Council has long wanted MIT to do the same thing for Route 128.

Kirtley addressed the High Tech council and described to them the plans that Gerald Wilson, chairman of the Department of Electrical Engineering, had been developing with the Council for a year. MIT would soon offer employees of high tech industry an opportunity to earn a Master's degree by conducting their research at a high-tech firm. How is this different from an MIT degree? you may ask. Well, it hardly is. It's not a new degree and does not even need to be approved. Both the categories are from the Stanford program.

Oh, yes, there is a little extra fee. Since professors advising off-campus theses must devote attention to research which is not their own, the cost includes high tech firms roughly $2500 above what students are paying for industrial cooperative programs such as 6A (co-op) or those run by the Center for Advanced Engineering Studies.

It is true that Gray did not expect the Council to be totally satisfied with the program. "I am acutely aware that several of you believe this program is too small to make a difference. . . . I hear you."

However, reports following the Council meeting painted MIT as igniting high tech concerns. "Gray reported that MIT had little indication to offer part-time degree programs or off-campus programs to Massachusetts. The largest industrial institutions have obligations, and I am asking you to try to structure their activities in a way that will ensure the widest social benefit and it is not clear that MIT is meeting that standard."

Steve Solnick

Growing your own

Last Thursday, an article appeared in The New York Times describing a machine being marketed by Vega Laboratories. The machine, a "microcomputer-controlled polysynthetic synthesizer," has been dubbed the "gene machine." It costs about $50,000.

Vega's gene machine will let the operator easily create a string of nucleotides—a piece of DNA—with any arbitrary order he desires. Looked at another way, for about the same cost as four years of MIT tuition, one gets the capability of creating one's own custom-made life forms! The implications of this are amazing. Adolescent would-be nars will no longer be satisfied with a deluxe Skillcraft "juvenil genius" chemistry set, they will want a gene machine of their own. Would-be engineers will no longer apply to MIT: After all, for a comparable amount of money one could "tweak" one's own genes, resulting in a clone with natural tendencies and abilities to do the things taught in 4.02 or 8.13. Commerce also that new technology causes prices to drop. MIT's tuition has yet to do the same. And, of course, the gene machine would bring new meaning to the phrase "growing your own."

It may bear some watching by all of us.

Richard Salz

SAV AS LONG AS WE HAVE YOU HERE UNDER CATH, DO YOU OR DON'T YOU DYE YOUR HAIR?
A STARTING POINT FOR HOPE:

For over sixty years, the Pine Street Inn has provided food, clothing, and shelter to the homeless men and women of Boston. Throughout that time the Inn's philosophy has remained the same: "Our doors are open to all."

The Inn has 300 beds for men and 50 for women, but sometimes as many as 80 additional men spend the night there, on the floors and benches of the two lobbies. The beds are assigned each night, on a first-come, first-served basis. The guests line up to get their bed tickets, line up for food, and then line up for showers.

The people who live at Pine Street come from many walks of life, and include a former professor and a former opera singer. Most suffer from alcoholism, and a number of them come from the wards of the state mental hospital. Although many are elderly, there are a number of young guests as well.

NOTHING ELSE FEELS LIKE NAVY FLYING.

The sharp whine of jet engines covers the flight deck.

Throttles are at full power, and you're waiting for the signal to launch.

Now: The catapult fires. G forces slam you back into your seat. Suddenly, you're flying low and fast over the night sea.

Nothing else feels like Navy flying. Nothing. And as a pilot or flight officer you can be part of it.

The Navy puts you in full control of a multi-million-dollar super-sophisticated combination of jet aircraft and electronic wizardry.

In return, the Navy demands something of you: Leadership. As officers, right from the start, members of the Navy aviation team get decision-making authority, leadership responsibility, and management experience. Other careers can give you responsibility. But Navy gives it to you sooner.

Make your first leadership decision now. Send in the coupon. Nothing else feels like Navy flying.

NAVY OFFICERS GET RESPONSIBILITY FAST.

The Sharp Whine of Jet Engines Covers the Flight Deck.
Counseling is available for the guests but is not required. Respect for each individual’s dignity and privacy is the most important aspect of the inn’s attitude. “A real key is knowing someone’s name,” says Pam Winsor, an administrative assistant. “If you can say ‘Hi, John,’ it really helps.”

Over half of the Inn’s funding comes from outside donations. These include bedding, clothing, food, tools, books, and most importantly, volunteers. The volunteers and staff members clean the rooms, make the beds, and do the laundry. Volunteer groups prepare and serve meals for the guests; student nurses help out in the clinic.

This Friday the Alpha Delta Phi fraternity will begin a 24-hour basketball marathon to raise money for the Pine Street Inn. If they succeed it will mean a new world’s record for them, and for the Pine Street Inn it will mean more of the homeless will have a starting point for hope.

A committee is being formed to investigate the inability to actively include off-campus students in UA programs. The central issue the committee will be addressing is the lack of proportional representation in the General Assembly. All are encouraged; for more info, call Bill Ogilvie at x3-2198 or stop by the UA office.

Members of President John F. Kennedy’s administration will speak at the Kennedy Library on Sat. Jan. 24 to commemorate the 20th anniversary of Kennedy’s inauguration. Theodore Sorensen, Arthur Schlesinger, Jr., McGeorge Bundy, and Dave Powers will be the guest speakers. They will discuss their experiences in launching the Kennedy administration, and offer insight into the problems confronting a new president. The talks will be given between 11:30am and 2:30pm.

In conjunction with the speakers, The Making of the President film series will be screened on both Sat. Jan. 24 and Sun. Jan. 25. These films are based on Theodore White’s Pulitzer Prize-winning series on modern presidential elections. A film of President Kennedy’s historic inaugural address will be shown several times through the weekend.

STARTS FRIDAY, JANUARY 23 AT A THEATRE NEAR YOU.
Film explores the inner self

Altered States, starring William Hurt and Blair Brown, screenplay by Sidney Aronson, directed by Ken Russell, produced by Howard Gotfried.

One of the best films you're likely to see this year is Altered States, adapted from Paddy Chayevsky's novel of the same name. It's a slick combination of love, horror, and existential probing. With smooth direction from the generally abrasive Ken Russell, this film should slip right into some Oscar nominations.

The story is about Ed Jessup, a brilliant young behavioral scientist at Harvard Medical School. He is subverting the rules of responsible research by doing sensory deprivation experiments on himself while under the influence of an exotic hallucinogen. Through a cell metamorphosis that is alternately ascribed to DNA alteration, quantum energy leaps, and Godel time travel, he physically enters his own hallucinations.

Jessup's motivations are spread before us buffet style. He is obsessed with matters of religion, metaphysics, and the quest for the inner self. He wants to experience the "first thought," the beginning of time. Fortunately, the film does not slide into transcendent existentialism. It is a well-researched science fiction tale and a well-played story. It doesn't take itself too seriously and yet never seems a farce. There are scenes of chilling pain and horror, but they don't rely on cheap, nightmarish effects. It reaches deep into existential hypnosis but stays rooted in recognizable human behavior.

Chayevsky has abandoned the "last angry man" approach that won him Academy Awards for The Hospital and Network, and replaced him with "the last curious man." The heavy-handed caricatures of those two successes have been replaced by a more sympathetic cast whose hopes and fears are not hurled at us from the screen like rocks, for a change. The homework and preparation evident here should be deemed extraordinary for a non-scientist. In the original novel (please turn to page 7).

CATHOLIC GRADUATE STUDENTS TAKE A BREAK THIS IAP!

Let's face it. If it was like last semester, this next one isn't going to be any picnic, especially if you are trying to graduate in June. And if you haven't taken the time to relax and settle your thoughts about what you are doing, you're running out of time to do so before the semester takes charge of your schedule.

If you are a Catholic graduate student, whether active in the Church or not, we would like to offer you an opportunity to do just that, and maybe make some friends and put some sparkle in your relationship with God at the same time. The MIT Tech Catholic Community is sponsoring its annual graduate student retreat during the last weekend of IAP. January 30-February 1, at the Campion Center in Weston. We'll spend the time between Friday supper and Sunday lunch getting to know each other, discussing our relationships with our associates and the Lord, and just plain relaxing. Even a wine and cheese party! The atmosphere will be friendly, informal and down-to-earth.

Please consider seriously this invitation. The linen and meal charge for the weekend is $30.00, but the TCC is willing to help any student for whom this is an obstacle. Sign up on Sundays at chapel or contact Rich Celotto (3-5318) or Father Moran (3-2881).

IAP 81 THE ENGINEER AS ENTREPRENEUR

Ever wanted to start your own high-tech company? Take in the last two talks of this series, sponsored by the Alumni Association and the Energy Laboratory. Each talk the president of a local company tells about the motivation, planning and resources which led to the formation of the company, discusses its growth, history and problems and assesses the current position.

Friday 23 January, 10:00 am, 16-134
Dr. Arthur Gelb, President of TASC (The Analytic Sciences Corporation), Reading, MA

"Entrepreneurship in High-Technology Engineering Services - or How TASC Grew to $25M Annual Sales Without Making Nuts and Bolts"

TASC was founded in 1966 and preaches and practices in the areas of modern analytical systems, engineering, econoic analysis and data management. TASC has been described as "The House That Kalkan Filtering Built." TASC works for the Government in areas of defense, energy and transportation, and, selectively for business and industry. It has grown at 30% per year since its inception.

Monday 26 January, 10:00 am, 4-149

"Broad-Based Technological Services - An Opportunity for the Low Budget Entrepreneur"

Dynatrend was founded in 1971, and specializes in unique high-technology services as opposed to high-technology products.
Harvard professor takes a trip in ‘Altered States’

(continued from page 6) Chayevsky acknowledges the tutoring of over a dozen medical and anthropological specialists from across the country.

As for director Ken Russell, never has he said so much with so little. The scenes are dark and claustrophobic with emphasis on the potent dialogue. His trademark lavish sets have been toned down to exclude the over-done symbolism that was so prevalent in some of his previous films.

But don’t think that Ken Russell’s eye-poppers have been exorcised. Tommy forbid! In a script sprinkled with hallucination, time travel, and transmutation, he gets to strut his stuff in the grand tradition of bright lights and loud noise. The result is a controlled and faithful rendition of Chayevsky’s original concept.

William Hurt is the hero who is seen hanging upside-down in the movie’s ads. His performance is a fine mix of fear and obsession. After each trip into the unknown, he returns more alienated from family and friends and more emotionally drained by the experience.

Blair Brown, as his wife, gives the film its emotional drawing power. Without her, we probably wouldn’t care what happens to Jessup because he shows a definite disregard for everyone but his much-touted “self.”

A major shortcoming of this film is its omissions. In the original story, Jessup is motivated as much by a desire for fame as by curiosity. There is considerable talk of Nobel Prizes and the “race to Stockholm.” The research is characterized by competition as well as comradeship, the hoarding of ideas as well as the sharing, all of which has been deleted in the film’s final version. Chayevsky, Russell, and the film’s producers have missed an opportunity to repay his scientific mentors by detailing this facet of their actual environment.

This film will make a lot of noise around Boston, responses which may be louder than the film itself. Because it deals with so many intangibles, it ultimately must be judged for what it attempts. But even without the degree of difficulty factor, this film is a success. It should relieve the tension headache that Hollywood gave us for Christmas.

Peter Thompson
Tech pair all-stars

By Eric Fleming

The second annual Greater Boston Conference (GBC)-New York all-star track meet will be held at Harvard this Saturday, with a pair of MIT track stars gaining berths on the Boston squad.

Six schools (Brandeis, Boston, Northeastern, Tufts and M.I.T.) from the GBC will go against such schools from the New York area as Rutgers, Seson Hall, C.W. Post, Iona, and Fordham. Last year, the track teams from the Big Apple won by a decisive 103-38 margin, but the meet was an exciting one.

Some of the top performers for the GBC teams include Adam Diane of Harvard, last year's 880 winner; Eric Carson of Tufts (60-yard dash); and Jura Adu of Boston University in the triple jump. They will be competing against New York stars such as Ephrym Serrette of Fairleigh-Dickinson (60-yard dash), Walt Kirkland of Rutgers (880-yard run), and Rich Alexander of Manhattan (long jump).

MIT's Gordon Kelly was named head coach of the Boston team for the second straight year. Joining Kelly in representing the Engineers are Paul Neves, '83, who took third in the 880 at last year's GBC-New York meet, and is defending New England Division III champ in the half-mile, and Jim Turlo, who has steadily improved in the high jump following numerous injuries in previous years.

The Belmont native set a new varsity record of 6'8" in last Friday's meet against Bates (a 78-67 win, the first over Bates in four years), and also won the 55-meter hurdles. Turlo says that he is pleased with the team's overall performance and would like to get off to a fine start, in light of the ailments which have kept him out of action for several years.

The meet is scheduled to begin at 1pm, with tickets priced at $4. The Harvard track facility is located in the Soldier's Field athletic complex near North Harvard Street in Boston.

Gays and Lesbian Awareness Day

COME TO THE FINAL PLAYOFFS

COlLEGE BOWL 1981

January 26, Tuesday

(snow date: Wed. Jan. 28 in Kresge)

Train With Us in New York... And Take a Great Career Home With You.

CHASE is now hiring foreign national candidates who are interested in furthering their career in their home country as entry-level officers, after initial training in New York.

We're seeking individuals with an exposure to business and finance to take advantage of this unique opportunity to join our global financial network. You'll apply quantitative and qualitative skills towards developing innovative solutions to challenging international financial problems and will play a key role in financial operations.

Openings now exist for foreign nationals of the following countries who are interested in applying their professional expertise in their home country:

- Canada
- Bahamas
- Paraguay
- St. Thomas
- Venezuela
- St. Croix
- Dominican Republic

Upon completion of Chase's highly renowned training program in the New York headquar ters, individuals will assume immediate responsibility as Credit and Marketing officers at a Chase bank in their home country.

Interested individuals may contact Seth Edwards, Second Vice-President, at (212) 552-4628 or Michael Kosakowski, Vice-President, at (212) 552-4627, or write either gentleman at 1 Chase Plaza, New York, N.Y. 10016.
