Pace Subcommittee advises changes

By Ivan Fong

The Pace and Programs Subcommittee report is part of the CEP's review of MIT's undergraduate program, a report on which was issuing last February. In addition to MIT's undergraduate pace and requirements, the retention of freshmen and the changes in the adoption of a new system of assigning class units.

Loan reminder

All students who do not sign their National Direct Student Loan checks before October 1st will face an interest increase of four to five percent, and there are still "hundreds of unsigned notes," according to Leonard V. Gallagher '54, director of Student Financial Aid.

"Maybe 250 to 300 checks" will be needed to be signed, said John Rogers, Student Loan Officer. Over 2,500 MIT students receive loans through the National Direct Student Loan program, according to Rogers. The student financial aid office sent a letter over the weekend to students with outstanding loan checks, pointing Rogers. "They should be getting them today."

President Reagan signed the NDLL, which will increase the interest rate to 8.5 percent by August 16th as part of his 1982 budget.

Bush to talk at Student Center

By Jerri-Lynn Scofield

The Student Center is the tentative site for Vice President George Bush's speech to the MIT Sustaining Fellows Program on October 26, 1981, according to William A. Dickinson, Vice President for Operations.

Bush will speak in either the Sala de Puerto Rico or Lobdell Dining Hall. His visit will probably restrict student access to the second and third floors of the building. As a result, the Technology Community Association (TCA) blood drive will probably lose between 50 and 100 pints of blood, according to Blood Drive Coordinator Cindy Prihble '82. The drive was scheduled to be held from October 26 until November 6 by "the end of the term last year," commented Prihble.

"Closing more than the second floor of the Student Center, that's intolerable," said Institute President Paul E. Gray '54. In the event that the Secret Service decides that all of the Student Center will be closed to prepare for Bush's speech, we would move to DePauw," declared Gray.

According to Dick Hartwig, spokesman for the US Secret Service, the site for Bush's speech will be closed "anywhere from a week before a week ahead of time to several days beforehand, depending on what the plans are." Based on the experience of former Vice President Walter F. Mondale's visit to MIT last fall, Gray commented, "That clearly is not the way they do it." Based on the Secret Service's experience, the Technology Community Association (TCA) blood drive will probably lose between 50 and 100 pints of blood, according to Blood Drive Coordinator Cindy Prihble '82.

Citizen Gang expressed in his inaugural address, 'to review the character of the MIT educational experience, paying special attention to the questions of pace, coherence, and intellectual impact.'

Professor Felix Villars, Chairman of the Faculty and Chairman of the CEP, said that the CEP would consider each of the recommendations "one by one... until every valid consideration has been looked at." Villars noted that in releasing the report, he expects "additional expressions of views from students and faculty."

Similarly, Fleming says "he hopes to have the widest possible dialogue between the Institute and the CEP to modify the recommendations if necessary... and so bring the recommendations for a Faculty vote." (Please turn to page 2)

Previous WI "quietly died"

By Tony Zaninarri

Edwin Whitehead, founder of the proposed Whitehead Institute (WI) that will be discussed at a special faculty meeting on Wednesday, attempted to establish a similar arrangement at Duke University, which "quietly died," according to John Whitehead, member of the board of directors for WI.

The Whitehead Institute, announced at Duke in June, will be a research institute that ties with Duke Medical School. It would conduct "purpose-oriented" research that would move quickly to hospital use.

The Duke Whitehead Institute would have had a staff of fewer than 600 persons. Whitehead would have endowed the Institute with $1 million a year in operating funds. Whitehead said in 1974 that he was "a major portion" of his Technicon Corporation stock would be donated as an endowment for the Institute on or before his death.

Whitehead sold Technicon in 1976 to the Revlon Corporation. He is chairman of several universities in 1974 for the site of his research institute. The programs include MIT, Harvard, and Stanford. Duke was chosen mainly because of its highly favorable impression of the school's President, Terry Stanford.

The reasons for termination of the agreement between Duke University and the Whitehead Institute "have never been disclosed," said Bob Wilson, associate director of Duke's news office.

The focus of research at the Whitehead facility has changed since the unsuccessful attempt to establish it at Duke. "His initial concept was a more purpose-oriented institute... He's become more aware of the importance of basic research," said (Please turn to page 3)

Open office hours today

MIT President Paul Gray will hold open office hours in 3-208 from 4 to 6 on Monday. Show up and speak your mind!
Campus rep. needed. Dr. Glass COMMSTRAT, 261 1 Beechwood Blvd., Pittsburght by creative travel agency. Earn from famous mills. Excellent for teachers, especially Italian. Call 354-6111.

E-Systems engineers are continuing in their foot-steps today. They are pioneering technology and solving some of the world’s toughest problems in electronic transmission and signal-reception in an interference and noise background using basic Gaussian concepts.

E-Systems “pioneer-ing” in communications, data, antenna, intelligence and reconnaissance. The proj-ects results in systems that are often the first-of-a-kind in the world.

By Michael Shimano
This weekend, artists, scien-tists, futurists, and sky and space officials met at MIT “to explore the future role of culture in space and to develop plans and thoughts about the human use of space” in the first of four interna-tional Sky Art Conferences.

The conference, which ended to-day, featured exhibitions, lec-tures, and panel discussions: focusing on the sky as an artistic medium and “sky events” in-cluding inflatable sculpture, kite flying, and an excerpt from a sky opera by Paul Earls.

Harold E. Edgerton, 77, In-stitute Professor Emeritus and a pioneer in ultra-high speed and underwater photography, is Chairman of the Conference. Otto Pierre, Professor of En-vironmental Art and Director of the Center for Advanced Visual Studies at MIT, is the Conference Director.

Pierce, himself a noted sky ar-tist, first coined the term “Sky Art” about ten years ago and came up with the idea of a Sky Art Conference five years ago.

His largest sculpture, “Blue Star Lintz,” was featured on Saturday.

“Those who participate will have an opportunity to share mutual concerns for the peaceful exploration of space and what it means beyond pragmatic con-siderations,” said Pierce.

Emphasizing the mul-tidisciplinary focus of the Conference, Pierce noted, “This exchange of thinking and ex-perience in the areas of art and technology will be of major value to artists and scientists as sources of inspiration and orientation.”

MIT was chosen as the site of the first conference because of its reputation for incorporating science into art. “There are very few places where the mix of art and technology is as advanced as it is here,” said Paula Keats, Press Coordinator for the Conference.

Future Sky Art Conferences will be held in Lintz, Austria, next year; in Paris, France, in 1983; and simultaneously in Los Angeles, Center, California and Japan in 1984.

Sky as artistic medium focus of first conference

WANTED TECHNICAL TRANSLATORS
Native speakers of SPANISH, FRENCH, ITALIAN and GERMAN in areas of engineering, com-puter, law, economics, etc. Part-time to free lance. Also, foreign-language teachers, especially Italian. Call 354-6111.

GREAT OPPORTUNITIES! Campus rep by one of three travel agencies. Earn extra money and get to travel! Togo Ass. and/or Togo Ass. Ltd. Call toll-free 1-800-332-0720.

MEDICAL SCHOOL INTERVIEW: Private simulated interview with former medical admissions committee. Paul campers, law, economics, etc. Part-time.

Piano Lessons by concert pianist (B.A. Mannes College of Music, M.A. University of Denver.) Accepting advanced students and a limited number of beginners. Interme-tadates: Dorothy Fine Sager 666-4682. Sonata.

Carpet Remnants Save 50% to 85% on Carpet remnants from famous mills. Excellent for bedrooms and student rooms. All fibers, all colors, hundreds to choose from. Frank Duffy Carpet Center, 955 Mass Ave, Cambridge. MA 02134. Phone 464-4444.

US interest rates blamed for record losses in Tokyo. London — Yesterday marked the worst day in the history of the Tokyo Stock Exchange, as average stock values dropped nine percent in Monday's trading. The London Stock Exchange closed down 17 points, with the value of issues traded dropping by five percent in just thirty minutes. Analysts blamed the poor performance on high US interest rates, which drew investment capital from foreign stocks in the United States.

**Guerrilla warfare in the streets of Teheran** — Rebel Mujahedin guerrillas battled Iranian Revolutionary Guards in the center of the Iranian captiol for seven hours Sunday. The machine-gun and rocket-grenade exchange, which ended in the breaking of a four-day truce, was the heaviest fighting in Iran since the revolution led by Ayatollah Khomeini against the late Shah. Radio Teheran reported forty injuries in the fighting, but reports indicate that the final toll may be much higher.

Iran claims key victory over Iraq — The Iranian government claimed Sunday it had broken the seven-month Iraqi siege of the refinery city of Abadan. Iraq admitted only that heavy losses had been incurred repelling an Iranian attack. Radio Teheran claimed 600 Iraqi casualties and 1500 captured Iraqi soldiers.

**Meditations keep control of British Labor Party** — Denis Healey retained his post as deputy leader of the Labor Party in a narrow margin Sunday Night. It took three ballot counts to determine that Healey defeated leftist challenger Tony Benn by a margin of less than ninetenths of one percent of the ballots cast by Labor members of Parliament, trade union representatives, and local party leaders. Lamonteste Benn, "the forces of democracy and socialism cannot be stopped in Britain."

Stock market rebounds 18% points — The New York Stock Exchange rebounded substantially yesterday, following a drop of 88 points in the Dow Jones Industrial Average over the last month. Although dropping 15 points in the first half-hour, active buying by bargain hunters pushed the Dow Jones index up by 18.55 points to the final bell, closing at 842.36.

Reagan addresses police chiefs — In a speech before the National Association of Chiefs of Police convention in New Orleans yesterday, President Reagan announced a proposal allowing judges to deny bail to defendants judged dangerous to the community. One of the loudest outbreaks of applause from the chiefs came when Reagan suggested the use of the military to slow the flow of drugs into the country.

Hinkley admits to shooting — John Hickey Jr., admitted in court yesterday that he did shoot the mayor's aide. Reagan and three others at the Washington, DC, Hilton Hotel March 30. Hinsley's attorneys confirmed that their defense will be that their client was insane at the time of the shooting.

By Barry S. Surman

No progress has been made on financial issues separating MIT and the Research, Development, and Technical Employees Union (RDTUE), the largest union on campus, in their attempts to reach agreement on a new contract, according to chief negotiators for both parties.

Last Thursday afternoon, the Institute presented a final offer to the RDTUE in a bargaining session arranged by James Archibald of the Federal Mediation and Conciliation Service. The three-hour meeting did not produce any results, according to John N. Goddard, President of the RDTUE. "We scheduled another mediation date for next Tuesday at 10am," he said. "There's nothing else they really fired or agreed upon."

"They have a final offer," explained James J. Culliton, Assistant to the Vice President and Director Personnel for MIT. "They have refused that... and they have a counter-proposal they have come forward with." He added that James J. Fandel, Manager of Labor Relations, was examining the union proposal in preparation for this afternoon's meeting.

Goddard said that his negotiations committee found the MIT offer "unacceptable. We don't have any confidence in this proposal." He said the Institute's offer, he observed, would alter the structure of pay scales for his membership. "We have rate ranges for each job classification within our union... the proposal would create a reduction of the raise in the event of a recession."

The MIT offer would also "make it [take] longer to get to the top classification," said Goddard. "In the current proposal," he added, "the Institute does not want to apply the pay increase to the entry level."

"This seems to be the central issue... the money, this whole wage rate schedule," Goddard concluded. He said the RDTUE might accept the ten percent wage increase agreed to by the physical plant and dining service employees, but "it depends how the overall package looks."

Culliton described the RDTUE's dilemma: "The committee from the union has to be convinced they can sell it [the contract] to the union." He added, "My hope is... to settle this quickly."

Setting a strike deadline "could happen [this] week," said Goddard. His union represents over eight hundred Institute employees.

Variable cloudiness today with strong northwestely winds and high temperatures in the upper 40's, although wind-chill factors during the day will be in the 40's. Winds will diminish somewhat tonight with high temperatures in the upper 50's. For Wednesday, expect mostly sunny skies with light southwesterly winds high in the upper 40's. Chance of rain 10 percent through Wednesday.
Grays premature solicitation

President Gray advertised in last Sundays New York Times for corporations seeking to invest in university research.

The solicitation was not a "Help Wanted" classified ad, but an article in the business section entitled, "MIT Wants Closer Ties With Business." While noting that objections have been raised to the use of increased corporate contributions to fill the gap left by shrinking Federal funding, the article left the impression that the problems have been solved and checks were gladly being accepted.

The article reflected a problem similar to that raised by earlier Congressional testimony by Gray which endorsed increased Department of Defense spending on campus and assured concerned Congressmen that students would not object. Both statements were made without open consultation with students and faculty members.

Contrary to Gray's assertions, many different problems remain to be solved before increased corporate contributions without increased corporate interference in the free exchange of information can become a reality. Some questions have barely been raised: what effect will the increased contact with industry have on the quality of research? is it fair to ask people from other corporations? Now is the time for studied debate, not hurried appeals. Many faculty members and students are willing to discuss the answers, even if MIT is not willing to ask the questions. All who are concerned should take the initiative and make their views known: circulate petitions, write letters, make use of Grays open office hours. While MIT should attempt to solicit a wide range of views, past experience teaches that awaiting such an action may be futile.

In order to compensate for the numerous funding cuts imposed by Reagonomics is easily the most important problem facing MIT in the immediate future. Unless all issues are raised and valid points considered the Institute may arrive at a cure which does not deal with — or is worse than — the disease.

Balancing priorities in banquet siting

Students will not be able to hear Vice President Bush speak at MIT on October 30, even though the MIT Administration is temporarily running a hotel banquet for MITs Sustaining Fellows in the Student Center. Security considerations dictate that at least two floors of the Student Center will be closed before Bush is scheduled to speak, displacing, among other events, the TCA-sponsored blood drive.

MIT's commitment to move the event to duPont Gymnasium if necessary is a good one, but the entire Student Center is crowded and no room is available for a temporary Student Center. Eliminating Walker Memorial Dining Hall from consideration prematurely may have been a mistake. The MIT administration made a second event need to avoid disrupting student activities. Whitney's statement at a recent student meeting that LSC would only displace another set of students is not true.

Admittedly, MIT must balance a desire to offer proper banquet facilities with a need to avoid disrupting student activities. Eliminating Walker Memorial Dining Hall from consideration prematurely may have been a mistake. The MIT administration made a second event need to avoid disrupting student activities. Whitney's statement at a recent student meeting that LSC would only displace another set of students is not true.

To the Editor:

Today I tried to see the movie "Tea," but I was turned away at the door because I was late. The hall was not full.

The usher said, "I can't let you in because you haven't paid, and I can't let you pay because I'm not supposed to take your money." This sounds like Catch-22 to me. I was willing and expecting to pay, but if I couldn't enable me to do so, he could have let me in. He was being a dog in the manger, and he wasn't decent enough to be ashamed of it.

An official eventually happened by (coincidentally) and talked to me and the several other who would-be customers in the same situation. Her words are indicative of her attitude. First she said, "It's your fault that you're late." Truly, nobody but me caused that, but being late doesn't mean it's impossible for LSC to let me see the movie. It doesn't cause me to miss it. Her decision does, and for that, she is responsible and to blame.

As it happens, some of the other people were late because they went to 26-100 by mistake. I suppose LSC's attitude is, "(you make any mistakes, you deserve any bad thing we can do to you.)"

When we mentioned that LSC had always sold us tickets in the past, if we were late. This refusal was a surprise to us. She said that it was always at the director's discretion. I suppose this is true, but LSC had never done anything to inform us of it. Said that, and she said, "We have done this at a few movies before." I said I must not have gone to those movies, and she said, "Well, now you have!"

It seems that she considers it a satisfactory way of informing the public about their policy, to let each member of the public trip over by surprise! After all, once surprised, we have been informed. She asked us to consider our situation just like an overflow. The important thing about the situation is how it differs from an overflow. If the hall is full, and LSC is unable to sell tickets, it is not LSC's fault. This time LSC was perfectly able to let me in, but unwilling. The responsibility falls in their lap. It's typical for a person who is refusing to be helpful to pretend that he has no choice; that way, he can get whatever benefit and avoid the onus of having been uncooperative. People pass the buck to unnamed other people who turn out to be — they themselves, at a previous time.

She did attempt to offer a reason for the policy, saying that latecomers were a disturbance. However, this seems bogus. I have never noticed a latecomer while I was in an LSC movie — how could I notice them, with all the noise being made by the people already seated? LSC's attitude is the natural result of their monopoly on showing films. We need them, they don't need to be friendly. I think their monopoly ought to be taken away. But until that happens, we can play their game, and give them a taste of their own medicine:

"I'm sorry but I am not allowed to pay for watching this movie. That's the policy, it's been decided, and I can't make an exception for you." You don't have to mention who it was who decided the policy.

Richard M. Stallman
DNA research statutes drafted

By Sophie Lukashok
The Massachusetts Public Health Association held a conference on "Genetic Engineering and Public Health" Friday, Sept. 25 to present the public with a draft model of legislation regulating the usage of genetic engineering in research and industry.

At the conference, the Massachusetts Public Health Association presented the draft of the ordinance to professors involved in all aspects of genetic engineering. They further hope to obtain feedback from the public as to how successful the ordinance is. It is necessary that this be amended so that it can provide the most favorable conditions for both the community and the industry. The final model ordinance will be ready in November.

The MIT community was represented by Jonathan King, a professor of microbiology, who discussed the public health issue, and by David Houseman, from the MIT Center for Cancer Research, who represented academia at the panel discussion.

The first genetic engineering and Public Health conference was held last year, when the communities expressed skepticism as to whether genetic manipulation was being conducted safely. There have been legislative attempts to regulate the industry; however, it has been found that "withholding thereof is contrary to popular interest."

This ability would extend to limiting access to knowledge not harmful to the US security. At MIT, the Committee on the Changing Nature of Information, has been formed, to explore how export controls affect research at MIT.

Included in the jurisdiction of H.R. 109 is control of printed materials which could possibly be used by other countries to their benefit in technological advancements. Dr. Louis Menner 3d of the Proctor's office feels that this bill would limit the ability of MIT and international students to participate in many types of research. Bennett has indicated that his intention was not to limit freedom of speech, but rather to improve the confidentiality of military matters.

H.R. 109 was first introduced in Congress on January 5, 1981. Currently the bill has received no Executive comment. It has been introduced into the Subcommittees on International Security and Scientific Affairs of the House of Representatives. The bill has been rejected by previous Congresses.

By Lee Bill H.R. 109, a bill presently in the House of Representatives which attempts to amend the Arms Export Control Act may permanently affect research and learning at MIT.

If passed, the bill would give the Secretaries of Defense, State, and Energy the power to regularize any information released from the United States munitions list, according to the bill's sponsor Charles E. Bennett (D-Mass.). This would include many applications of computers dealing with cryptography and circuitry research.

The government would have the right to withhold any information pertaining to research on military hardware. Hence, it was found that "withholding thereof is contrary to popular interest."

Instead of trying to restrict export control acts, MIT has formed a committee to present guidelines for everyone involved. It is expected that the committee's proposals will be presented to the Congress in the near future.

(Continued from page 1)

John Whitehead. The WP proposal posited that the MIT faculty will employ up to 20 tenured faculty members and do research in biology and medicine. Some of the board members in the discussions with Duke are on the present WP board, noted John Whitehead. "Legally it's a new board," said Whitehead. The new board "has been formally active for several months" he added.

The Whitehead Institute would not open at MIT for at least three years, noted David Baltimore, Institute Professor and director designate of WI.

The board of directors of WI currently contains eight members. Five of the eight are tied to Edwin Whitehead, noted Pravasi Francis Louw, but the three remaining are independent. Baltimore is a member of the board.

Six more members will be added to the board, including three from MIT. Former President Jerome Wiener, Abraham Siegel, Dean of the Sloan School of Management, and William G. Auten '51, a member of the MIT Corporation.

You got the best camera. You got the best film. Why didn't you get the best pictures?

A good film lab can make all the difference between good pictures and disappointing ones.

Here at PhotoQuick, we do just that by custom printing your film. That means we inspect each and every negative by hand before it's printed. And make corrections for color balance and density - corrections that most likely would be missed by a large time consuming automatic equipment.

PhotoQuick is ready for your next roll of film. We think you'll be pleasantly surprised to find that we're not only better, but cheaper.

P.S. Free presentation copy of "Slow down, take a deep breath..." by Dr. Louis Menner 3d of the Proctor's office.

A good film lab can make all the difference between good pictures and disappointing ones.

Here at PhotoQuick, we do just that by custom printing your film. That means we inspect each and every negative by hand before it's printed. And make corrections for color balance and density - corrections that most likely would be missed by a large time consuming automatic equipment.

PhotoQuick is ready for your next roll of film. We think you'll be pleasantly surprised to find that we're not only better, but cheaper.

P.S. Free presentation copy of "Slow down, take a deep breath..." by Dr. Louis Menner 3d of the Proctor's office.

Gallipoli: More Brilliance from Director Weir

Gallipoli, starring Mel Gibson and Mark Lee, directed by Peter Weir, now showing at the Nickelodeon Theatre.

The figure of a man, arm raised, pistol in hand, the look of terror etched on his face. His lip stammers uncontrollably as he tries to contain the emotion welling inside him. In a few seconds, it will all be over. With horrible effort, his lungs fill... and then exhale violently.

The shrill report of his whistle brings instantaneous attention. “Over the top!” Within minutes, the bodies of the wave that minutes earlier had also gone over the top and were systematically mown down like a giant lawn mower cutting through human grass.

Gallipoli, an obscure, barren peninsula on the Turkish coast, was the site of one of the most catastrophic disasters in military history. On a fateful morning in 1915, tens of thousands of young Australian and British soldiers lost their lives as a result of the near-criminal incompetence on the part of the leaders who headed the Gallipoli campaign.

And yet, Gallipoli the movie is not so much about the actual battle itself as it is about the story of two young men, Frank and Archy, on the road to adventure; how about the story of two young men, Frank and Archy, on the road to adventure; how does the elder statesman perform his task, is chosen as a messenger from the front line trenches to back to headquarters.

Finally he tells himself that the order must be all over. With British soldiers lost their lives as a result of the near-criminal incompetence on the part of the leaders who headed the Gallipoli campaign.

About two-thirds into the film, the fun disappears and the boys make their purpose in the war. Their initiation with danger occurs in a picturesque scene, with Archy and Frank bathing in the ocean.

In an intense scene of parallel action, the two actors almost by accident, in a personal dilemma. The excitement of moral justice, blessed with a great sense of moral justice, he remarks. “A man can’t send his men to the war. Barton, portrayed admirably by Bill Hunter, is caught in a personal dilemma. Blessed with a great sense of moral justice, he remarks. “A man can’t send his men to the war. Barton, portrayed admirably by Bill Hunter, is caught in a personal dilemma.

About the final climactic scene, we find Archy and Frank on line to go over the top. Frank, noted for his track skills, is chosen as a messenger from the front line trenches back to headquarters.

Major Barton, the leader of the troops at the front line, witnesses the slaughter of his men and sends Frank back to headquarters.

Barton, portrayed admirably by Bill Hunter, is caught in a personal dilemma. Blessed with a great sense of moral justice, he remarks. “A man can’t send his men to the war. Barton, portrayed admirably by Bill Hunter, is caught in a personal dilemma.

In an intense scene of parallel action, the audience is gripped wonder as to whether Frank can get the message back to the front line in time. Barton fumbles with his whistle and pistol, trying to buy time. Finally he tells himself that the order must be carried out. Did Frank make it? Did Barton disobey his orders? What happened to Archy? Enjoy the movie.

Go Ahead... Talk to Draper

Located in the Technology Square complex in Cambridge, Massachusetts, Draper Laboratory, Inc. is a world-renowned research center with a volume of over $50 million a year and nearly 2,000 employees.

We’re a hands-on laboratory involved in solving problems of pressing national interest. We do fascinating and rewarding work, attracting some of the nation’s most imaginative, inventive people. If you’re one of them, graduating with a degree in Electrical Engineering, Aerospace Engineering, Mechanical Engineering, or Computer Science, arrange for a Draper Interview.

The Charles Stark Draper Laboratory, Inc. will be at M.I.T. on October 6, 1981

See your Placement Office to arrange for an on-campus interview, or send your resume to: Dr. Daniel E. Gladkowski, Dept. C, The Charles Stark Draper Laboratory, Inc., 555 Technology Square, Cambridge, MA 02139.

Koo-Koo. Debbie Harry on Chrysalis Records

The first thing that irritates me about this album is its sheer pretension: what more perfectly trendy thing for one of NYC’s trendiest couples — Debbie Harry and Chris Stein of Blondie — to do than team up with darlings of the disco funk world, Chic members Bernard Edwards and Nile Rodgers. This seems more than a little patronizing and an effort to get in with all possible in-crowds, to your reviewer’s judicious eye. On top of all this, it’s a boring record from people with great track records, which is sad.

The record is produced and packaged with Brillstein-Grey as the chief selling point. It’s got her plastered on the barrage cover and the in-sleeve, and her voice is pitched way forward on every track. Harry has a good voice for the cool, romantic pop she’s done before, but she wasn’t meant to do disco/rap stuff — her voice is harsh and strident in the extreme, and it effectively blows Edwards’s and Rodgers’s instrumental work.

All Harry’s previous suave fane and “sidewalk sociology” which made Blondie’s albums so sophisticatedly tongue-in-cheek, go for nothing here; there’s even a quotation from Poe on the sleeve — “Doubtless,” said 1, “what it utters is it’s just as well. The collaborations between the Big Four — Rodgers, Edwards, Stein, and Harry — are musically confused, and Harry flounders with the raps. She did so much better on her own: almost everything that’s on this album is her own silliness through the verve that so marked her being a part of Blondie.

Go back to popland, Debbie, I want more “Atomic” and “Call Me” clogging the airwaves. The collaborations between the Big Four — Rodgers, Edwards, Stein, and Harry — are musically confused, and Harry flounders with the raps. She did so much better on her own: almost everything that’s on this album is her own silliness through the verve that so marked her being a part of Blondie.

Just Won’t Do

Can You Solve An International Crisis?

The International Relations Club’s Central American Crisis Simulation will give you an opportunity to use your negotiating skills to lead a nation safely through a crisis. A crisis simulation is a huge, interactive “game” that dynamically explores the influences of domestic policy, international diplomacy, military action and media reporters of different nations and try to resolve important issues. This simulation is based on the Foreign Intervention in El Salvador. The objective is to have a lot of fun playing the game while learning about the complexity and dynamics of international relations and crisis resolution. The simulation begins at 6:30pm on Friday, October 2, in room 2-23 and will run until 10:30pm. It will resume on Saturday at 10:00 am and run until mid-afternoon. Try to come early but late comers will be welcome. Everyone is welcome to participate and, of course, there will be a prize.

Attention Class of 1985

Petitions are now available for membership on this year’s freshman Council. All you need do is get 40 signatures and you’re on! The Council will meet Wednesday at 10:00 am in room 204.

STOP BY

The UA has many projects in the works. We encourage you to bring any ideas or would like to help, if you have any questions or suggestions, please contact John Debray (UAAP), Ken Damas (UAVP), Joyce Pollock (Deans’ Office) and Mark Chin (Special Projects Director). The UA office is located on the 6th floor of the Student Center, Room W203.

UROP Office Opening

Office help is needed starting September 29. The Undergraduate Research Opportunities Program (UROP) is the office. The pay is $4.00/hour for about ten hours per week. Duties include typing, filing, xeroxing, etc. Contact William Hinze, 208-141, x-5049; MIT students only.

Date Changed

After the first Social Council meeting, the Homecoming was changed to October 23. Workers are needed to help with all aspects of planning. If you have ideas forHomecoming, please join the Social Council at a meeting every Monday at 7pm in Room 204. Questions about planning will be discussed. The Social Council meeting will be held on Tuesday at 7pm in the UA office (W20-461), for information contact Skip Butler, 357-608, or Angie Cunha 208-451.

The Rolling Stones, September 23, 1981
JFK Stadium Philadelphia, PA.

Seeing the Rolling Stones perform live
enforces the impression that can be
drawn from their recent albums: this is
not the same band that it was 15 years
ago. Society and the music scene have changed,
and so have the Stones.
The Stones were once known as the bad
boys of rock and roll. They seemed
to delight in inciting controversy and indignation
in everything they did. However, in the
1970s and 1980s they have become more popular
and their influence has expanded so that they
have become acceptable, even, as one of their
songs suggests, “respectable.”

They almost seem eager to avoid controversy
as they used to be afraid of it. For example,
lyrics on their latest album, Tanzania,
are as innocuous as those of almost every top group. Also notable is the complete
absence on this tour of Jagger’s notorious stage antics of the ’75 and ’76 tours.

IIS ons

The concert at JFK Stadium was a
monument to media hype. Helicopters with
tv crews aboard soared overhead con-

The Stones finally took the stage at 4pm,
three hours after Journey left the stage,
opening with “Under My Thumb.” Maybe
Jagger, at 38, can’t move as fast or jump as
high as he once could, but he can still excite
audiences almost to a frenzy. The rest of
the Stones (joined by Ian McLagan on
keyboards and Ian Stewart on piano),
demonstrated their years of experience of
playing to large audiences, looking as sm-

IIS ons

The Stones played for almost 2½ hours,
routing through such standards as
the 90,000-plus crowd had taken their
seats. I realized that this was the worst con-
sciousness I had ever seen (and I’ve
been in some bad ones — including the
Who concert in Cincinnati). People were,
for the most part, rude, loud, obnoxious,
within out of their minds and often,
hostile. I hate to think what would have
happened if the Stones had cancelled.

FROM NASHUA,
NEW HAMPSHIRE,
YOU CAN
SEE THE YEAR
2000.

At Sanders, our future depends on our ability
to see the year 2000. Clearly as one of the world’s leading
top producers of advanced electronic systems and
products for government and industrial applications,
Sanders views the world with long-range vision.

If you have creative vision maybe you belong in
Nashua with Sanders. We welcome candidates
with BS or MS degrees in Electrical Engineering,
Computer Sciences, Physics, Math, Industrial
Engineering, or Mechanical Engineering.

SOFTWARE DEVELOPMENT

Graphic displays; information processing; signal
processing in digital computers and realtime applications;
data base; simulations.

CIRCUIT & SYSTEMS DESIGN

Avionics test equipment; receiver and R.F. systems
technology; electronic countermeasures; signal
processing systems for realtime control
microprocessors and bit slice computers; graphic
displays systems; antenna design; radar systems.
See the years ahead with Sanders.

On-Campus Interviews

COMMUNICATING

SUCCESS

Careers in Communications 
And Instrumentation

At Scientific-Atlanta, we expect you to stretch yourself to meet a
diversity of challenges. The pace of technology is so rapid that
we know you will meet new professionals with whom to
work. Our 35% compounded increase
over the past five years is
an unprecedented
achievement.

The world of communications is
changing at an unprecedented
pace. Here is an industry where
your fresh ideas and energy will
be welcome. Satellite and cable
technologies will soon dominate
the most vast communications
network imaginable. You can
contribute to this exciting
environment as you join our elite
engineering community.

Thinking strategically led us to
our position as an acknowledged
leader in the design and manufacture of equipment for satellite communications,
cable television, energy
management, and home security
systems. Scientific-Atlanta’s
leadership extends to the
management and sales of test
and measurement instruments for
industrial, telecommunication
and government applications.

If you are an ELECTRICAL ENGINEER and have an interest in
design work in the hardware or
software areas, please contact our
placement office and arrange to
meet with us on

By Eric R. Fleming

After a pair of season-opening wins, the women's field hockey team was shut out this Friday and Saturday at Steinbrenner Stadium.

Friday, the Engineers were blanked at the hands of Colby, 4-0, while on Saturday, Bates controlling the action deep in Tech territory. However, Cindy Farmer '84 put some life in the MIT attack with a good rush as Bates had 17 shots and ten corners found in the first half statistics.

Bates scored what proved to be the first half-play of sophomore forward Karen Rensaud, who had several good rushes, and Farmer's play in the second half. Tomorrow, the Engineers have a chance to turn the tide on its own defensive work which has started as a tough defensive football contest ended more like a rout as the Fitchburg State Falcons beat the MIT Engineers 19-0 Sunday afternoon. After a tightly-played first half in which neither team was able to put any points on the board, the Falcons exploded for 123 yards rushing and one touchdown in the third quarter.

In the fourth quarter the Falcons added two more touchdowns, one by quarterback Dave Falkenstrom, who had 125 yards rushing on the day, and another on a 71-yard touchdown pass from Falkenstrom to tight end Bob Eblidge. Eblidge was last week's Offensive Player of the Week for the New England Conference of the National Collegiate League Club Football Association.

Falkenstrom was hampered by the loss of quarterback Barry Jordan '83 to a knee injury after he was sacked in the first quarter. His replacement, Vincent Martinelli '85, did not have a bad day, however. Martinelli was 18-32 for 83 yards thanks to some very good catches by his tight ends and the Falcons defense.

The MIT offense came late in the game when forward Liz Anderson '84 carried the ball up the right side, but fanned on the shot. The only bright spots for MIT was the first-half play of sophomore forward Karen Rensaud, who had several good rushes, and Farmer's play in the second half.

Bates took a 5-0 lead in the first game. MIT woke up in this game with in recent years. Simons to give the Engineers a hard-earned victory. The large trophy earned by the MIT squad was accompanied by a trophy for MIT's Most Valuable Player in the tournament, super setter Linda Plano.

soccer beats trinity

by martin dickau

the mit engineers soccer team broke into the win column saturday afternoon, defeating visitors trinity college 2-1 in what was probably the engineers’ best game of the season.

the engineers opened the scoring just under thirteen minutes into the game when a shot taken by ali bohjan ’83 was deflected by trinity’s goalie john simons right to the waiting steve pomeroy ’83 who booted it past the fallen simons.

simons and mit goalie sang hao ’85 then shut down the scorers, with hao coming up with some very impressive saves late in the half to preserve mit’s lead.

with just over four minutes remaining in the half, however, trinity’s mark lee took a shot at the goal mouth. this gave mit a penalty kick. john busa ’83, a greater boston conference all-star, took the kick and easily put it past the diving lee’s jersey.

front of the trinity net, headed the ball in toward the goal, forcing simons to commit himself. the shot never reached simons, however, as it was intercepted by john english ’83 who quickly headed the ball to where simons was not.

as a result, mike herwitz, a trinity fullback, was forced to catch the ball at the goal mouth. this gave mit a penalty kick. john busa ’83, a greater boston conference all-star, took the kick and easily put it past the diving lee’s jersey.

the engineers opened the season with a match against salem state last wednesday. mit’s solid team play carried the team to a 1-0 victory in the first game. after a rather poor second game which salem won 1-0, mit regained its momentum and won the last two games 6-14, 15-6.

because of their win over salem, the engineers arrived at the salem state tournament two days later full of optimism and ready to again face salem state. mit took a 13-3 lead in the first game before passing failed. salem pulled to within one point but the engineers won the game 15-13.

mit had no trouble demolishing salem 15-6 in the second game because of great setting by linda phano ’82 and awesome hitting by freshmen lori cantu and janette kauch.

the team’s second match was against fitchburg state, a much weaker team. great defense by stephanie stein ’85 helped the team beat fitchburg 15-5, 15-4, along with the scoring of many points on hard hits by francis reddick ’82.

in the final match on friday, the team faced eastern connecticut state college. normally a good team, enc fell apart when their spikes were continually dug by mit players, particularly akiko kodaka ’84, and returned as hard hits. julie kooner ’85 scored many points for the team with her hard hitting outside the mit victory 15-7, 15-3.

mit faced the only other undefeated team— easter connecticut state college—in the first match on saturday. mit’s emotional control of the game helped the team win 2-1.

an unkind injury to ace spiker lori cantu slowed the squad’s momentum at this point, but after ecsc brought the score to 12-5, mit pulled together and won 15-5.

in the second game, mit scored many points on freshman anelia borhan’s fast spinning hits down the line as ecsc fell 15-7.

in mit’s second match on saturday, the team played the university of vermont, a very good division i team. the match began with a solid 15-10 victory by the engineers. umv came fighting back however, and won the match by defeating mit 15-8 and 15-6 in the final two games of the match.

the team recovered quickly from their loss, beating baldwin convincingly in the following match 15-11, 15-7. in the last match before the finals, the engineers faced the university of maine. although mit was struggling a little in the second game, the team was the match in three games, 15-4, 11-15, 15-1.
