SCEP debates new fresh pass/fail plan

By Robert E. Malhein

MIT and Whitehead will share up to twenty faculty members. The presidents will apply for the affiliation agreement between the two institutes.

The US Department of State recently notified MIT and other universities of its new policy to review the research programs of visiting scholars from the People’s Republic of China.

The Department of State sent a sample draft of a letter which would seek details on the research programs of visiting Chinese scholars who may have access to sensitive technical information.

The Department of State has not sent yet an official version of the letter, according to Louis E. Menand, Special Assistant to the Provost. "No one at MIT has received [the letter] in real form," he said.

The Department will not send an official letter until it wants information on a specific student, according to Menand.

The new State Department procedure is a modification of one which drew severe criticism and a general lack of cooperation from the University officials last year. Under the new guidelines, the universities would not assume a "monitoring burden" nor would they be subject to "adverse consequences," the State Department claimed.

Five college presidents — Paul E. Marks '59, Stephen E. Norris '60, Kenneth B. Kennedy of Stanford University, Mary C. Blackwell of the Institute for Technology, Frank H. T. Rhodes of Cornell University, and David S.axon '41 of the University of California — sent the US State, Defense, and Commerce secretaries a letter protesting the proposed letter. The presidents' letter was addressed to Walter S. Annenberg, chairman of the National Security Council.

We are deeply concerned about recent attempts to apply the International Traffic in Arms Regulations (ITAR) and the Export Administration Regulations (EARL) in a way that subjects students and engineers would alter fundamentally the system that produced the student. (Please turn to page 2)

The ASA is responsible for regulating all student groups at MIT. It is a constitutional body that assigns them bulletin board space and office space, representing their collective interests, and resolving disputes between the groups.

By Barry S. Sarman

The Association of Student Activities (ASA) is a general committee of the Undergraduate Association (UA), and consists of representatives from student groups.

The proposal is "not unheard of," according to Silbey. "In fact one Wellesley student did this already on her own, getting a degree from Wellesley, then transferring to MIT.

Campbell believes the full committee will have a proposal for the joint degree by the end of the fall term.

"What is exciting is the possibility of an education that allows you to experience both an engineering and a liberal arts education simultaneously," Wellesley President Nannett Keohane said last year about the proposal. She declined to comment at this time.

MIT President Paul F. Gray '54 was unavailable for comment.

By Tony Zamparelli

Members of the Student Committee on Educational Policy (SCEP) discussed the Committee on Educational Policy (CEP) proposal to change the freshman pass/fail system, but did not agree on a SCEP position on the CEP proposal. Thursday, October 28, 1982

The SCEP members recommended a formalized system of hidden grades for all freshmen in the spring term, along with new evaluation forms for the end of the fall and spring terms. The faculty will discuss the proposal, which will take effect upon faculty approval, at its December 2 meeting.

We need to go on record..." said Steve Barber '84, SCEP chairman, at the meeting. "In different circumstances, we would have been pleased with the CEP plan. However, since we have never agreed on a SCEP position on the plan, we must go on record..."

"We didn't decide anything," Barber said after the meeting. (Please continue its discussion on Thursday, he noted. "I don't know what we're going to end up doing.

The CEP member noted that at the meeting all but a few of the students he asked "really didn't seem to care at all" about the CEP proposal. Many students believe the faculty is indifferent to student opinions, said the CEP member. Freshman pass/fail will be changed if students oppose the plan.

A major objective of the pass/fail proposal is "to improve the effectiveness of the student-advisor relationship and to give students more independence," according to the CEP report.

The proposal has nothing to do with what it's supposed to do," said Joseph Johnson '82 at the SCEP meeting. Faculty members, he said, "just want to give a grade at the end of second year.

The present evaluation system just does not work," Barber said, explaining that a low percentage of students fail their courses, making fresh pass/fail evaluation forms completed by students and instructors. Freshman hidden grades are needed so freshmen will work harder and faculty will help them adjust to graded courses, said student council president, Sara Spring '84.

"This proposal is the result of a lot of hard work," Barber said. "The idea, also, was to improve the effectiveness of student-advisor relationship and to give students more independence." In spring of this academic year, the undergraduate "new curriculum," was approved.

"The proposal is in effect the same as the original SCEP proposal," Barber said. "It's very hard to find a compromise."
US to watch PRC scholars

By Andrea Marks

Dr. Burrhus Frederic Skinner, the well-known and controversial psychologist lectured on "Behaviorism: What is it all about?" at the Cambridge Forum Sunday. Skinner, who received his doctorate from Harvard University in 1931, believes human behavior has been misunderstood for 3,000 years. "The world acts upon us," he said, "but we think we do what we do because of our feelings and ideas. "We should all be aware of what is being done to us ... and should know as much as possible about ourselves," he said.

Behaviorism deals with "knowing oneself well, and knowing why one behaves as one does," according to Skinner. Events, he said, not feelings, cause behavior.

Consequences are the motivation for human behavior, Skinner said. A gambler, for example, is motivated to act because of the possible outcome — a monetary reward.

Education, Skinner believes, is a form of "manipulating a human being," or behavior modification, since what a child is taught is decided before the child can choose for himself.

Skinner gained recognition in the 1940s for his controversial ideas on child-rearing and his animal experiments involving operant conditioning — teaching animals to perform tasks in an experimental environment in exchange for rewards. He has written several books based on his theories, including "Walden Two, Beyond Freedom and Dignity," and an autobiography.

Whitehead to begin building

(Continued from page 1) joint faculty positions and will be reviewed by both MIT and the Whithed Institute.

Accepting acceptance, the faculty members will be paid full salary and benefits by the Whitehead Institute, according to Prout, but they will have full faculty obligations at MIT, including teaching MIT students. The MIT faculty and corporation approved the Whitehead Institute affiliation last December after heated faculty debate.

Professor David Baltimore '71, will be the Whitehead Institute's first director. Good, Cushing & Associates designed the Whitehead building, which will be built by the Turner Construction Company. Turner also built the new Whitaker College and Medical Development building.

The building will have six floors, including a basement. It will include a common area, a lecture hall and four floors of laboratories.

The next advancement could be yours!

At Northrop, people and their ideas make advanced technology work. It works because we match people's interests with our needs in project teams, where individual responsibility and development potential are greatest.

If your professional interest is listed below, we would like to discuss the different career paths available to you.

- AERONAUTICAL ENGINEERING
- ELECTRICAL ENGINEERING
- MANUFACTURING ENGINEERING
- INDUSTRIAL ENGINEERING
- PHYSICS
- BUSINESS
- COMPUTER SCIENCE
- MATHEMATICS
- MATERIALS SCIENCE

Our representative would like to discuss your interests and how they may lead to a career with Northrop.

Japanese prime minister visits China — Prime Minister Suzuki arrived in Peking Sunday for a six-day visit. Japanese-Chinese trade, which exceeded $10 billion dollars last year, will dominate the talks between Suzuki and Chinese leaders. Suzuki also promised to heed Chinese protests over recent revisions in Japanese textbooks. The Japanese Education Ministry last summer rewrote accounts of the Sino-Japanese war and reduced references to Japanese brutality that occurred during the war.

Social Democrats win German regional election — West German Chancellor Helmut Schmidt’s Social Democratic Party won a majority of seats in elections for state parliament in Hesse. The victory over the Christian Democratic Party came only five days before that party’s planned attempt to oust Schmidt from office by a vote in the Bundestag, the national parliament. The small Free Democratic Party, which precipitated Germany’s present government crisis by resigning from Schmidt’s governing coalition, did not win any seats in the Hesse vote.

Nation

Man charged with Saturday shooting spree — Police in Wilkes-Barre, Pennsylvania, said George Banks, 40, killed seven children, five of them his own, and six adults Saturday. The adult victims were said to be four women who have had Banks’s children, and the mother of one of the women. Banks was arraigned for the murders Sunday and yesterday. The county coroner said Banks shot many of the victims while they were asleep or watching television.

Dam breaks; many homeless — Nearly 2000 people fled their homes Sunday in and near Bishop, California after a dam on the North Lake broke. The water destroyed homes in nearby Aspindell, California. “The town is reasonably safe, but if we have any more dam problems up there, we could be in serious trouble,” reported Bud Clayton, a member of the Sheriff’s Department’s search and rescue team. “The town is reasonably safe, but if we have any more dam problems up there, we could be in serious trouble.”

OFFICIAL DENIGRATES RISE IN SAT SCORES — William J. Bennett, chairman of the National Endowment for the Humanities, commented that the modest rise in average verbal and mathematics scores on the Scholastic Aptitude Test “is not a cause for triumph.” After 18 years of decline or no change, the average mathematics scores of graduating high school seniors rose one point, and their verbal scores increased two points.

Proposition 21/2 not as severe as predicted — A recent Associated Press survey of Massachusetts cities and towns has indicated local cutbacks in services from the state tax-cutting measure have not been as severe as predicted. In a poll of municipal officials conducted a few months after voters approved Proposition 21/2, municipal officials predicted they would have to make widespread cuts. Although the cuts have not been as severe as predicted, local governments closed 230 schools the first year the law took effect, and diminished 360 police and 550 firefighting jobs.

Peace plan disgusting

(Editors note: This is the first in a two-part series on the Middle East. Part II will appear next Tues- day.)

The Reagan Administration's Middle East peace plan is the lat- est in a long series of attempts to resolve the Arab-Israeli conflict that are, at best, equivocal. Many people who are aware of the Middle East. By proposing, as Rea- gan's plan, to link any future Pal- estinian entity to the Kingdom of Jordan, the United States is set- ting itself in the path of a possible con- flict. The United States, as well as the United Kingdom, France, and the People's Republic of China, and possibly to modify these students' academic plans at the government's request.

Since 1970, MIT has followed a policy of not permitting classified research on its campus, making it highly unlikely that visiting scholars could be exposed to information which could compromise national security. Because a university is an estab- lishment dedicated to the free exchange of knowledge, it is highly inappropriate for governmental agencies to attempt to restrict this exchange. It is again time for President Paul E. Gray '54 and other academic leaders to express unified in- digation at the State Department's ill-advised efforts.

Lebanon massacre inquiry necessary

Thousands of Israeli citizens have taken to the streets in re- cent days to call for the resignations of Prime Minister Men- chem Begin and Defense Minister Ariel Sharon in the wake of the Israeli military in allowing a group known hostile to Pal- estine. Begin and Sharon must accept full responsibility for the role they played in the massacre of the Old City. The United Nations Security Council will soon undertake an inquiry into the reprehe'nsible''massacre. Begin's attempts to, thus refusing to assign blame. In

Japanese censorship textbooks

In a blunt attempt to change history, the Japanese government has ordered that several passages in high school textbooks devoted to the history of Japa- nese aggression against the peo- ple of Korea and China. This order has already raised furor never seen before in the diplomatic circ- les of Asia. The people and the governments of mainland China, Taiwan, and Japan are shocked to note that the government has ordered that certain parts of the book be revised. The contents of the book, which is taught in all high schools in Japan, have been removed. The book contains many facts and figures that are not consistent with the government's version of history. The government has ordered that certain passages be removed from the book. The government has also ordered that certain photographs be replaced with photographs that are more flattering to the Japanese government. The government has also ordered that certain maps be redrawn to show Japan's influence in Asia.

Japanese censorship textbooks

One of the main reasons for the Japanese government's censorship of history textbooks is its desire to present a positive image of Japan. The government wants to present a picture of Japan as a peaceful and democratic nation. The government also wants to present a picture of Japan as a nation that is respected by the world. The government wants to present a picture of Japan as a nation that is respected by the world. The government also wants to present a picture of Japan as a nation that is respected by the world.

Corporate mergers harm the US economy

The multi-billion-dollar take-over saga of Bendix, Martin Marietta, United Technologies and Allied finally ended last Friday, as Allied merged with Bendix in a deal worth 89 percent of Martin Marietta's stock. But now that one of the most bizarre stories in recent corporate history is completed, what was really accomplished?

As a summer intern at Martin Marietta's division in Denver, I can remember my last days there filled with talk of a possible Bendix takeover. I even joked that next year I would be working at home in Detroit, since Bendix's corporate headquarters are in the Detroit suburb of Southfield. My assumption soon became clouded with confusion, as the issues turned to state laws of incorporation, antitrust, and financing. When United Technologies jumped into the shark tank, befuddlement over the natural course processes, U.S. Steel doesn't have to look at it-self very closely, and revamp practices that will only hurt, not help, in the long run.

Reagan abuses trust

(Continued from page 4)

compensation, given the domino and duplicative diplomatic track record of the Arab states and the Soviets will happily testify to the validity of this fact. The dark hints that some American officials continue to make about the viability of the Soviet government strike one as odd; do these gen-

eralists really realize the mists of arrogance that their med-

dling in Israel's internal affairs is sowing? Israel with therein-

er's idiosyncracy is not what is at issue.

When Allied said it wanted to play, I gave up on trying to sort it out. Luckily, this soap opera came to a quick close after Allied merged with Bendix.

Of course, the natural course to take for a post-mortem is to look at who won, and who lost. At first glance, it appears that Bendix (at least its shareholders) won, Marietta won (it wasn't taken over), and last (its balance sheet took a beating from buying Bendix stock), United Broker even and it may have gained a little. However, I don't think this is the case. The new owners are the investment bankers and lawyers who handled this mess. The loser is the American econ-

domy. Did all of this money and man-

oeuvres improve the nation's econ-

omy, open a new market overseas, or create new jobs? Of course not, and neither have many of the recent corporate mergers, which merely are at-

ttempts to improve the short-term bottom line.

U.S. Steel, notably, exemplifies this mentality. For years, this company has been under severe cost competition from European steelmakers. Saddled with old, obsolete plants and production processes, U.S. Steel doesn't try to modernize its capital stock; it obtains all the financing it can to buy Marathon Oil, for about six billion dollars, while at the same time crying to the U.S. govern-

ment for protection from import-

ed steel.

And what of the four friendly companies engulfed in this latest struggle? William Agee, chairman of Bendix, is known and hated in the corporate world for his att-
tempts to buy another company with its band of cash; RCA, a target in March. United's Har-

dy Gray has built a conglomerate of $14 billion, not through new products, but through gobbling up other firms. Only Marietta has developed from within, and is a quiet, healthy three billion-
dollar concern, thanks to a strong aerospace unit. Not only was money involved, but ego's as well.

As an article in last Friday's Wall Street Journal notes that "indi-

vidual cunning, determination, andshore all personal ego-rath-

er than business and financial considerations-play a striking role."

Many, including the Reagan administration, turn a deaf ear to these corporate versions of "Pac- 

Man", saying that it is all part of the free enterprise system. But fortunately others, including Robert Hayes and William Ahern 

nathy of the Harvard Business School (whose article in the school's Review, "Managing our Way to Economic Decline," was a frank and timely view of the na-

tion's economic problems) have come to look upon most mergers as doing more harm than good. At a time when our economy is facing the toughest challenges it has seen in half a century, Ameri-

can business needs to look at itself very closely, and revamp practices that will only hurt, not help, in the long run.

The Commencement Committee invites recommendations for speakers and/or topic areas from all members of the MIT Community for a Commencement speaker at MIT's Commence-

ment on Friday 27 May 1983. The Commencement speaker should be one who will be able to address topics of relevance to MIT. Written nominations and topic areas may be dropped off at the following locations:

The Undergraduate Association Office — Room W20-401

The Graduate Student Council Office — Room 50-222

The Information Center — Room 7-121.

Deadline for nominations and suggestions is 22 October. In ad-

dition, suggestions may be filed with any member of the speaker subcommittee of the Commencement Committee. They are: John G. Kassakian, Chairman; Langley C. Keys, Ex-Officio and Chairman of the Commencement Committee; Kenneth E. Du-

mas, Senior Class President; William J. Hecht, Executive Vice President of the MIT Alumni Association; Walter L. Milne, Assistant to the Chairman of the Corporation and Assistant to the President; Mary L. Morrissey, Director of the Information Cen-

ter; and Laura T. Brown, President of the Graduate Student Counc-

il. The speaker subcommittee will review all suggestions and make a short list for submission to President Gray. The list will not be made public nor will it be rank ordered. The responsi-

bility and authority for selecting a Commencement speaker and is-

suing an invitation will rest with President Gray.

Emotions in Motion. Billy Squier on Capitol Records.

Quite simply, Emotions in Motion is standard Billy Squier. This is by no means intended to detract from this artist's talents. The album is an expected continuation of the sounds presented in his last successful record. Containing such hits as "Everyday," "I'm on Fire," and "In the Night," Squier preserves the promise he demonstrated in Don't Stay No More.

Squier, who has been recording since 1980, has a commendable ability to fuse the turbulent guitar of heavy metal, the course lute of his voice, and a powerful coarse lure of his voice, and a powerful

intermissions in "Is Your Eyes." Squier's tough rock brand of music is quite appealing on the dance floor, but these are not the chords to listen to while tooling on a problem set.

For those of you who missed his summer appearance at the Garden, too bad! He encored several times for a screaming audience that extended his weekend remains. Those of you who missed the concert this week, settle down the street and purchase the album.

After seven weeks on the charts, Emotions in Motion hit number five on Billboard's album survey. Squier is one of four solo artists to hit the top five more than once since 1980.

Suresh Sindhuwan
THE TOUCHDOWN: Vinnie Martinelli (7) passes to Stu McKinnon (86) who runs in for a twenty-nine yard TD play.

DEFENSE: Doug Gouche (47) brings down a fumble in the second half.

PASSING: The MIT offensive line gives Martinelli time to throw. Eddie Grado (12) and Vince McNeil (67) see that Fitchburg State's Ed Caveney (12) doesn't. State's backs can't quite get to the ball.

KICKS: Tom Hastings (28) opens the scoring with a thirty-yard field goal. Ver Stenger (45) punts the ball away. Hastings kicks off. Ellen Williams, Hyuna and Kathy Geary get "fired up".

THE PHOTOGRAPHER: Gerard Weatherby.
To the Editor:

This letter is in response to Mark Temple's Friday, September 17, column advocating that the Democratic Party propose new, dynamic policies to counter Reaganomics. I am not opposed to this. However, I think practical considerations have compelled Democrats and Republicans alike to stress their candidates' personalities rather than the issues.

Take for example the Massachusetts Republican gubernatorial primary. John Laid, a highly charismatic upstart with no political experience or platform of substance, captured his party's endorsement and held a lead in the polls until The Boston Globe published an expose that cast serious doubts upon his integrity. I see two reasons for this emphasis on personality. Firstly, the present vagueness defining party lines makes it difficult for a party to uniquely advance a platform, or for a voter to put faith in such an advancement. Look no farther than Democrat Ed King who supports Reaganomics and hence the economic policies and bided his time before endorsing fellow Democrat Dukakis.

Second, and more importantly, the issues have become extremely complicated. Reaganomics, our economic policy, have taught us that there are no clear solutions to our economic woes. Trial and error are the present trend. Set forth a program, and then allow forces in the system to shape it into a working policy. Thus, I believe the voter is less interested in seeing specific solutions or even a general set of principles advanced and more interested in seeing an energetic, charismatic candidate who will do something, allowing the complexities of the system to further define it.

For better or worse, I believe personalities, not policies, will win this campaign.

Raffi Aradian '83

---

To the Editor:

We are writing to express our disgust at an ad that you allowed to be printed in your Friday, September 17 issue. This ad dealt with a "Hottest College Jock" contest being held at a Boston gay lounge.

The presence of this ad in The Tech was a violent offense to the MIT community. It can be reasonably assumed that any organization that uses a newspaper for, or that matters television station or other public medium) gives advertising space to is an organization which that medium supports in some way and/or has respect for. Now, this is telling us that The Tech is willing to openly support, even more so in a manner, a group who seeks centerfolds for its gay lounge.

Supporters of the feminist movement from Eastgate toigonate would be out for the editor's head the moment the issue came out. The fact that a great majority of the population of MIT might be revolted by ads of this type should give enough cause for it not to be printed at all.

Just because it is uncomfortable to discuss homosexuality does not mean that we as heterosexuals can or should have to tolerate such flagrant neglect of our responsibility toward the school and its students, faculty, and personnel. This fact makes this unfortunate occurrence that much more of a shame.

Electrical Engineering and Computer Science Graduates

Reasons to investigate a consulting career with Booz Allen & Hamilton. We'll be on your campus Thursday, October 14

A consulting career offers opportunities and challenges you won't find with other careers. If you're a top performer with a strong desire for success, you should investigate a consulting career with Booz Allen & Hamilton. One of the world's leading consulting firms.

We're looking for innovative and highly talented people with degrees in Electrical Engineering, Computer Science, or related fields. If you're ready for the challenge of a consulting career, stop by and investigate Booz Allen.

We're one of the largest, most prestigious, international management and technological consulting firms in the world.

If you're unable to visit with us, send a resume or detailed letter of interest to: Ms. Laura Boggs, College Relations Department, Booz Allen & Hamilton, 4320 East-West Highway, Bethesda, MD 20814. We are an Equal Opportunity Employer.

Investigate Booz Allen & Hamilton.

On Tuesday, October 14, from 7 to 9 pm, in Building 1, room 135. Mr. Fred Cipriano will conduct an informal presentation that will tell you more about a technical career with BOOZ-ALLEN.

Join us for some interesting talk.

At Advanced Micro Devices, we're getting really good at what we do, and we're passing the right things the right way. We're on the leading edge of every critical technology in the semiconductor industry. There's still a lot more to do before we're Number One. If you're good at what you do, talk to AMD and Catch the Wave.

With your MBA, BS, MS or PhD in Electrical Engineering, Solid State Physics, Materials Science, or Computer Science, you can catch the wave with Advanced Micro Devices. AMD's wave carries the most exciting career opportunities in the semiconductor industry with a company that just passed $300 million in sales, and has its sights set on being a Fortune 500 company.

Make an interview appointment at your Career Planning and Placement Center. Or, if you can't make it on the above date, send your resume to Barbara Toothen, College Relations Manager, Dept. CM-MIT-1008, Advanced Micro Devices, 701 Thompson Place, Sunnyvale, California 94086.

**The Texas Instruments Home Computer.**

It's a whole new way to learn.

Having your own computer can open a whole new world for you. Whatever your chosen field, you'll find the Texas Instruments Home Computer a powerful tool for analysis, problem solving, record keeping, decision making, research, and more. And the power it places in your hands can be put to work quickly and easily.

**Broad choice of software**

Pre-programmed Solid State Software Command Modules — based on the same concept proven in TI's programmable calculators and containing up to 30K bytes of read-only memory — simply snap into place and you're ready to go. There are more than 40 of them. And over 400 more programs are available in cassette and diskette formats. There's a broad and fast-growing choice in the areas of engineering, science, business, art, self-improvement and entertainment.

**Powerful programming capability**

For your chosen programming, you'll find TI BASIC is a rich and versatile language. It's powerful, yet easy to learn and use. What's more, it's built right into the Texas Instruments Home Computer. Random-access memory supplied is 16K bytes (expandable to 48K bytes). There's an excellent, type writer-style, full-travel keyboard with overlays for second functions. Sixteen colors are available and sound through five octaves — 100 Hz to beyond 40,000 Hz — with capability for three simultaneous tones. At the heart of it all: a 900-family, 16-bit microprocessor.

Optional accessories — including speech! With the Solid State Speech Synthesizer accessory, you can add electronic speech — more than 370 English words. Use it with the Terminal Emulator II Command Module and TI's phoneme stringing technique delivers a virtually unlimited vocabulary. Other optional accessories include Memory Expansion (32K bytes of RAM), Disk Memory Drive and Controller, Telephone Coupler (MODEM), Solid State Printer, RS232 Interface, Wired Remote Controllers, 10-inch Color Monitor, and a Video Modulator.

Compare and you'll find the TI-99/4A Home Computer gives you more for your money, feature for feature. And, if you have a television receiver, you can get started for less than $600! See your dealer today for a demonstration.

Texas Instruments invented the integrated circuit, microprocessor and microcomputer. Being first is our tradition.
We're Gulf Oil Corporation. And we'll be on campus to look for something very much in demand these days. New energy. Specifically, new human energy.

The fast-changing energy field will continue to be one of the most exciting and rewarding places to launch a career into the eighties, and beyond. And Gulf has exceptional opportunities for new people with new ideas about solving energy problems.

Sign up for an appointment now at your placement office. And pick up some Gulf literature for background information. Because this year promises to be a great year for new energy. And we can't think of a better place to look than here.

**DATES: OCTOBER 12 & 13**

**Chemical Eng. & Comp. Sci. Majors**
Speaker, Homecoming activities, Social events, and '83 Newsletter. All members of the Class of '83 are invited.

Carol Yoo Wants You

The Class of '85 T-shirt and paraphernalia committee is looking for a chairman! Actually, it's also looking for a committee. If you're interested in producing a T-shirt that'll "freak-out" those Harvies, or a beer stein to drink those problem sets away, call Carol (x5-8883).

Speaking of T-Shirts

Class of '84 T-shirts will only be sold once this term. (And a good thing that is — could you imagine selling a T-shirt twice?) Shirts will be on sale in Lobby 10, today through Thursday. Price is $4.00 each, and colors are red, green, tan, dark blue, and light blue. 150 shirts are left and no more shirts will be made.

Interesting People at MIT!

The Educational Council is trying to give high school students an accurate idea of what MIT is really like. (Although that may be counter-productive ...) They need your help, and if you think that you are an exciting person that could convince high school students that they'd actually like to go to MIT, contact Susanne von Rosenberg (x5-8319 or 494-9039) or leave her a message at the Burton Desk (x3-3261).

Plea Do Not Hack

The Class of '83 will be holding an open meeting this Wednesday, September 29, at 5 pm in room 400 of the Student Center. Agenda items include Commencement appropriate information to:

Esteemed UA News Editor 20-40

If you are incredibly paranoid about the way your item will be printed, write "Do Not Hack" on your submissions, although you do so at your own risk.

DEFY HARVARD TERRORIST DEMANDS!

Don't submit to Harvard's decree that all MIT students will wear alligator shirts. But an MIT-mascot beaver shirt today through Thursday in Lobby 10 — only $10. MIT students unite! You have nothing to lose but your alligators!

New Editor, UA News Needs You, Too!

If your club has some event that it wants to publicize, send the appropriate information to:

Extensive UA News Editor W20-401

If you are incredibly paranoid about the way your item will be printed, write "Don't Hack" on your submissions, although you do so at your own risk.

UA News, by Shawn Wilson
Strong defense powers Engineers to victory

The Engineers, who were playing without the right side of their offensive line, are hoping for the return of some injured players before Saturday's game at Worcester State. Worcester is currently ranked number one in the league.

MIT's next home game will be October 16 when Bentley College comes to town for the homecoming game. That contest is scheduled to start at 1:30pm.

Ed Grado '83 before he could get the ball out of the end zone. The halftime score stood at 14-0. Fitchburg's lone tally came early in the fourth quarter on a twelve-yard run by Gordon Smith. Neither team had much success offensively after that, and the final score remained 14-7.

The MIT defense was, in the words of head coach Dwight Smith, "Just great." Besides holding Fitchburg to a net first half yardage of minus nine, the Engineers also forced seven fumbles, four of which MIT recovered.

The defensive star was Grado, who had five sacks for a total of fifty-five yards lost.
