

## City Council Approves Zoning Plan, Ends 20-Year Controversy

By Brian Rosenberg  
EDITOR IN CHIEF

A 20-year controversy came to an end on Monday night when the Cambridge City Council voted 8-0 to rezone about 70 acres in the Cambridgeport area.

The zoning ordinance contains several major provisions, including one under which MIT will donate land to the city for use as a park. MIT will then be able to transfer building rights from this land to another area, where the Institute

plans to construct graduate student housing.

The 1.5-acre park will be located at 82 Pacific St., near the corner of Brookline Street. Neighborhood residents wanted a guarantee that some land in the area would remain undeveloped, while MIT was concerned about losing flexibility in planning future construction. The parties reached a compromise when the residents' group, the Cambridgeport Rezoning Group, agreed to let MIT add the building rights for that area

on top of those already available in a strip of land north of Erie Street, west of the railroad tracks, and east of the proposed park.

The CRG "would have preferred the park to be further east, but MIT agreed to make the land immediately available," said Geneva Malenfant, a member of the CRG. MIT "will clear the park of cars and other junk covering it now" before presenting the land to the city, Malenfant said.

As MIT uses the transferred

rights, it will transfer ownership of the land to Cambridge. In the event that the city government tries to prevent MIT from building near Erie Street, the ordinance specifies that ownership of the entire park area will revert to MIT.

"Our general intention has always been that as we had resources, we would provide housing for graduate students [in the Erie Street area]. It's now just a question of running the numbers and figuring out exactly what we can do under

this new ordinance," said Ovidia R. Simha MCP '87, director of planning at MIT.

Simha said there was no timetable for any such construction.

BodySub: Affordable housing  
"There were three main goals in this zoning effort [which were] shared by everyone: to provide means for affordable housing, to provide open recreational space, and to protect existing businesses in the

## Sororities May Eliminate Pledge Period

By Alice N. Gilchrist  
STAFF REPORTER

In response to impending changes in Kappa Alpha Theta's national policy, the MIT chapter of KAT will institute a four-week pledge period next fall, replacing the current semester-long pledge period, according to KAT President Gabrielle L. Rocap '92. In the past, pledges have been initiated during the second term after fulfilling the "scholarship requirement" of passing at least 36 units, Rocap said.

KAT is adopting the shorter pledge period because it will probably "make the pledges happier" since they can become sisters faster, Rocap said. Pledges will also begin attending meetings with the sisters, instead of attending separate meetings, so that they can get to know the sisters sooner.

KAT's national organization is gradually instituting the shorter pledge periods in all its chapters, Rocap said. In a few years all KAT sorority chapters will be required to have shorter pledge periods, but currently the national organization has asked for some chapters to adopt the shortened period voluntarily. The MIT chapter has agreed to do, Rocap said.

Alpha Chi Omega may also consider shortening or abolishing its pledge period, but AXO President Stefanie A. Spencer '93 said that at this point it is "totally unknown" whether or not this will happen. She said AXO's national organization is thinking of shortening or abolishing the pledge period, but that a decision will not be made until the AXO national convention this summer.

Officers of both Alpha Phi and Sigma Kappa say their sororities have no plans to shorten their pledge periods.

### KAT responding to national trend

KAT is being "progressive" by trying "something different," said Neal H. Dorow, advisor to fraternities and independent living groups. KAT's national organization may be instituting the new program in response to a trend among national fraternities to shorten the length of their pledge periods, according to Dorow.

Dorow explained that some fraternities have shortened or eliminated their pledge periods to combat hazing, which has been a "problem" at the national level "for years and years." Dorow said that to different people, hazing can take on many meanings, ranging from simply dis-

## Clinton Criticizes Republican Tactics, Pledges to Aid Economy

Arkansas Gov. Bill Clinton, a leading Democratic presidential candidate, addresses supporters Tuesday at the Parker House in Boston.

By Halder A. Hamoudi  
ADVERTISING MANAGER

Before an estimated crowd of 1,200 at the Boston Parker House Hotel Wednesday, Democratic presidential candidate and governor of Arkansas Bill Clinton harshly criti-

cized the Bush Administration for its ineffectiveness in dealing with the United States's economic problems and reiterated his charges that the Republican party was behind recent allegations of womanizing and controversy over his military

draft history.

"George Bush said that it was a dog-eat-dog world out there and that he would do anything to get himself re-elected. Everything, that is, except do what's right for the American people," Clinton said.

Clinton added that if the Republicans were to win the presidential election again in 1992, it is very likely that the next generation of Americans could be the first whose standard of living is lower than that of their parents.

Calling the 1991 election one of the most important of the era, Clinton emphasized the need for change. "Every election is important, but some are more important than others. Do you want another four years of the 'take it for yourself and let others fend for themselves the best they can' philosophy that the Republicans represent? There has to be a change, and it has to be soon," Clinton said.

He related the stories of people who had been fired from their jobs shortly before they would have been eligible for pension and of poor families struggling to clothe and feed their children. Clinton said that as governor of Arkansas he had been forced to deal with federal cuts

which would have helped such people. As president, he would change this, he said.

"The Republicans say that you cannot make a difference, but don't believe them. I believe that everybody can make a difference," Clinton said.

The governor also ridiculed Bush for his stagnancy and charged

## California Flood Death Toll Rises to 6

LOS ANGELES TIMES

LOS ANGELES

Soggy Southern California awoke Thursday to a pre-dawn bang of thunder and hail, but the fourth day of rain soon subsided, giving storm-battered residents a chance to assess the deluge's grim toll and brace for the next pounding.

The number of dead rose to six as the body of 15-year-old Adam Bischoff of the suburban Woodland Hills neighborhood of the San Fernando Valley was pulled from the Los Angeles River. The death of a 63-year-old woman from Brea, Calif., who lost control of her car on a flooded Orange County road Wednesday night was also attributed to stormy conditions.

Searches continued for at least five others, including Lance Cpl. Jeffrey B. Johns, 22, a crew member of a U.S. Marine helicopter that went down in the Pacific Ocean off the coast of Oxnard. Also missing were two experienced skiers feared buried in an avalanche at Mount Baldy in the San Bernardino mountains and two men believed to have disappeared in the Los Angeles and Santa Ana rivers.

Rescue teams again hunted for bodies in the debris-clogged delta of the Ventura River, which subsided after Wednesday's torrential flooding submerged the Ventura Beach RV Resort trailer park. All the residents had been accounted for, but one homeless man who made his camp in the riverbed drowned and officials were concerned that others may have perished.

By Thursday, the river was little more than a wide, mud-filled basin dotted with mattresses, lumber, food containers, and splintered trailers. A few dead carp and crawdads were left scattered in the ooze.

## EPA to Allow Continued Use Of Controversial Fungicide

LOS ANGELES TIMES

WASHINGTON

The Environmental Protection Agency announced Thursday that it will permit farmers to continue using controversial fungicides, known as EBDCs, on 45 fruits and vegetables, contending that the cancer risk from long exposure to residues on food was minimal.

The announcement, which reverses a preliminary decision to ban use of the chemical on all but a handful of crops, was based in part on a study — financed by chemical companies that make the fungicides — showing that residue levels on harvested crops were essentially safe.

The EPA also said that new laboratory studies indicated that the active ingredient, ethylenebis (dithiocarbamate), is less potent in its cancer-causing properties than previously believed.

The chemical will continue to be banned on 11 other crops for which its risks outweigh its benefits.

The EPA's preliminary decision in December 1989 to ban most uses of EBDC immediately drew furious opposition from growers and pesticide manufacturers.

The chemicals, sold under such brand names as Mancozeb, Maneb, and Metiram, have been shown in laboratories to have significant cancer-causing properties.

But Reilly said the EPA now estimates that lifetime dietary exposure to the EBDC-treated foods would produce a one-in-a-million cancer risk — what the agency regards as "negligible risk."

Environmentalists, who have waged a five-year fight to curb EBDC use, reacted with disappointment.

Natural Resources Defense Council attorney Erik D. Olson said the action "violates the federal law's ban on adding cancer-causing pesticides to foods and fails to protect the public from a clear and significant cancer risk."

Craig Merilees of the California Consumer Pesticide Project questioned the validity of the market-basket study since it was financed by the EBDC producers — BASF Corp., the DuPont Co., Elf ATOCHEM North America, Inc., and Rhom and Haas Co.

In the market-basket study, a task force organized by the companies collected and analyzed more than 6,000 food samples. The result, the organization said Thursday, showed the potential consumer exposure to EBDCs through residues on foods to be "virtually non-existent."

## WEATHER

### Mixed Bouquet

By Marek Zebrowski

STAFF METEOROLOGIST

A short-lived clearing is forecast for Friday afternoon and night as a small area of high pressure passes over New England. Then, a low forming over the lower Ohio valley will begin moving eastward, bringing a variety of mixed precipitation to our area for late Saturday and into Sunday. Once again though, most of the precipitation seems destined to pass to the south of us, continuing our unusually dry winter weather pattern.

**Friday afternoon:** Partial clearing from west to east with a high of about 41°F (5°C). Northwesterly winds 8–15 mph (13–24 kph).

**Friday night:** Clear with diminishing winds. Some clouds advancing from the west towards dawn. Low around 28°F (–2°C) in town, and in the lower 20s (–4 to –6°C) outside the metropolitan area.

**Saturday and Saturday night:** Thickening clouds throughout the day with onset of mixed precipitation around nightfall. Some snow will develop over the northern and central portions of our area, while locally, a mix of rain, sleet, and snow is expected. Highs around 40°F (4°C), lows around 34°F (1°C).

**Sunday outlook:** Clearing in the afternoon with highs in seasonable 30s (2–4°C).

## U.N. Secretary-General to Call For 13,000 Troops in Balkans

By John M. Broder and Carol J. Williams

LOS ANGELES TIMES

WASHINGTON

U.N. Secretary General Boutros Ghali, fearing a fragile truce in the six-month Yugoslav civil war would soon collapse, Thursday recommended the rapid dispatch of as many as 13,000 United Nations peacekeeping troops to the Balkans, U.N. officials said.

Ghali will send a written recommendation to the Security Council early next week, asking that the force be deployed immediately, U.N. spokesman Francois Giuliani told reporters. Diplomats predicted that the council would swiftly approve the recommendation.

The secretary-general acted shortly after receiving a report from Cyrus R. Vance, the U.N. special envoy for Yugoslavia. Vance, a former U.S. secretary of state, reportedly urged the dispatch of U.N. troops after being assured that forces of the Croatian independence movement would abide by the terms of an internationally supervised cease-fire.

Giuliani said as soon as the council approves the large multinational force, the first soldiers would begin arriving, "within a couple of weeks." The force would be the second largest in U.N. history, after the 20,000-man Congo operation in the 1960s. He said the Yugoslav deployment would cost an estimated \$400 million a year.

On Wednesday, Ghali received a letter from Croatian President Franjo Tudjman, repeating his unconditional acceptance of the U.N. peacekeeping plan for Croatia and its Serb-controlled enclaves.

While Tudjman has indicated acceptance of the U.N. peace plan, leaders of the Serb-held Krajina region in southwestern Croatia, remain opposed to the deployment of international forces. Milan Babic, the leader of an ethnic Serbian enclave in western Croatia, rejected the U.N. plan and Thursday

warned of "large casualties" if peacekeepers are sent.

Giuliani said Ghali was aware of the opposition but decided to send the peacekeepers to prevent the current cease-fire from unraveling.

"We are not going in with eyes closed," Giuliani said. "Certainly we are concerned. But there also is a judgment that the decision to deploy is the best possible in view of the dangers on the ground if the decision is not taken."

Ghali met Thursday with the ambassadors of the five permanent members of the Security Council to discuss the mission. The five are the United States, which heads the council this month, Britain, China, France and the Soviet Union. No date was set for formal action on the peacekeeping mission, but U.N. officials said it likely would occur early next week.

The composition of the multinational force was not announced, although about 30 nations, most of them European, have been asked to contribute personnel for the force. Excluded will be Germany, whose constitution forbids it, and Yugoslavia's neighbors, such as Austria, Italy and Hungary.

In eastern Croatia, new cease-fire violations were reported Thursday. At least two people were killed and seven were wounded, Zagreb radio said. Croatia's mid-Adriatic port of Zadar also came under attack overnight, according to the radio reports.

At least 10,000 people have died since fighting erupted in Yugoslavia after the western republics of Slovenia and Croatia declared independence from the disintegrating federation last June.

Yugoslav federal troops joined forces with the dominant republic of Serbia in the effort to prevent Croatia's secession, hoping to preserve as much of the former Yugoslav state as possible. One of the largest standing armies in Europe with 180,000 troops, the Yugoslav People's Army would

have no reason to exist without the Balkan federation, and land-locked Serbia could not afford to support the massive infantry, air and naval forces by itself.

When a nationalist, non-Communist government won Croatia's first multi-party elections in half a century in the spring of 1990, Serbian militants within the republic began arming themselves in anticipation of confrontation with the Zagreb leadership.

Serbian President Slobodan Milosevic vowed to preserve a united country in which all Serbs could live, and he is believed to have organized the rebellions that broke out in Serbian communities of Croatia in August 1990.

Citing the rhetoric of Tudjman and a need to protect Croatian Serbs from a feared genocide, rebels like Babic declared vast areas of eastern Croatia independent from the secession-bound republic. That sparked conflicts with Croatian police and security forces dispatched by Zagreb to quell the revolts.

Those clashes gradually escalated, expanding into full-scale war after Croatia declared independence and the federal forces joined the Serbian militants and guerrillas. Outgunned and outmanned, Croatia has since lost about one third of its territory to Serbian control.

The U.N. troops are expected to deploy to three designated crisis areas along Croatia's 350-mile eastern border; most of the areas are now occupied by Serbs and the army. The deployment plan includes many of the ethnically mixed towns and villages that have been the scenes of intense fighting.

If the U.N. troops are seen by either side as aiding the other, they could come under fire by hostile or renegade fighters who feel they have been cheated in the intervention deal. Forces loyal to Babic have already warned they will shoot at any foreign troops who enter their territory without their leader's permission.

## Congress Sees Little Joy in Long-Awaited 'Peace Dividend'

By Helen Dewar

THE WASHINGTON POST

WASHINGTON

For as long as most lawmakers can remember, Congress dreamed of the day it could declare the long-awaited "peace dividend," showering a grateful nation with the fruits of victory from the nearly half-century-long Cold War.

Now the moment is at hand, and there is little joy on Capitol Hill.

"The truth is we are not prepared for peace in the world," said Rep. Julian C. Dixon (D-Calif.).

The reason for the dismay — and second thoughts about defense-spending cuts that are gripping doves and hawks alike — is jobs, especially jobs during a recession.

As many as 2 million civilian and military jobs will be lost by 1996 even if Congress goes no further than President Bush has proposed in cutting the defense budget, Senate Armed Services Committee Chairman Sam Nunn (D-Ga.) has concluded.

Aside from suggestions by Nunn and a few others, there is no short-term or long-term plan for conversion of these jobs, skills and resources to domestic purposes, a failure of foresight that the United States shares with the former Soviet Union, lawmakers note.

Without such planning, Nunn

said in a speech last week, "we may not only inhibit recovery from the current recession, we may also lose our best opportunity that recovery can lead to long-term economic growth."

The Electric Boat Division of General Dynamics Corp., largest employer in Rhode Island and second largest in Connecticut, has announced layoffs of up to 4,000 employees by year's end because of planned termination of the Seawolf nuclear-submarine program. Without Seawolf, General Dynamics has said it would pare back its Groton, Conn., work force of 20,000 over the next five years until work was finished on 15 other submarines on its order book.

Across the country in Southern California, Northrop Corp. announced elimination of 1,500 jobs when Bush proposed to phase out the B-2 "stealth" bomber program after adding five more planes, stopping at 20 instead of the 75 advocated earlier by the administration. Ultimately, nearly 40,000 jobs could be lost on the B-2 project, sooner rather than later if Congress rejects the five new planes. In all, 200,000 defense-industry jobs in California are believed imperiled by planned defense cutbacks.

Since the height of the Reagan administration's defense buildup in

1985, spending authority for new weapons has declined precipitously: from nearly \$100 billion a year to \$59 billion this year. Bush's proposal for fiscal 1993 would slice it further, to less than \$55 billion, cutting, delaying or terminating programs ranging from cruise missiles to tanks.

It was easy to strike heroic poses when the issue was guns vs. butter and the threat was the military-industrial complex or a hostile Soviet bloc, said a House Democratic aide. "It's not so easy when all the devils are gone, and the issue is some average guy's job on an assembly line ... especially if he's in your congressional district."

"Congress is caught between a rock and a hard place," said Gordon Adams, director of the private Defense Budget Project, which has pushed for a leaner military program. "The rock is the desire for a peace dividend. The hard place is jobs in your district."

For Congress, the critical decisions about cancellation of weapons, force reductions and base closures come when other jobs are shrinking rather than growing and when Americans are pessimistic about their economic future. In some areas, a military base or defense plant is the foundation on which the local economy rests.

# Justice Probes Document Alterations in Sales to Iraq

By Douglas Frantz  
and Murray Waas  
LOS ANGELES TIMES

WASHINGTON

The Department of Justice is investigating allegations that Bush administration officials altered records sent to Congress to disguise shipment of technology with military uses to Iraq, according to interviews and documents.

The investigation is trying to determine which officials were responsible for deleting military designations on some of the administration-approved export licenses and whether the changes violated federal law, two sources said.

Congress requested the list as part of its examination of administration policies that allowed Iraq to buy high-tech American goods,

some of which were used to build Saddam Hussein's military power. The deletion of some military descriptions meant that Congress did not get an accurate picture of the material licensed for sale.

The information was compiled from data at the Department of Commerce, which regulates export of sensitive technology.

Two officials at the National Security Council supervised the compilation and production of the records for a House investigative committee last year, said two administration officials familiar with the preparation of the material. The NSC was one of the agencies that implemented the Reagan administration policy of increasing sales to Iraq in the 1980s.

The sources said they were

aware of no evidence that the NSC officials participated in the alterations, and no one has been accused of wrongdoing.

A confidential internal Department of Commerce memo indicates that high-ranking officials at the department and the White House provided guidance in the preparation of the list for Congress, but the memo does not discuss any alterations to the list or name any officials.

The investigation centers on export licenses for the sale of \$1.5 billion worth of high-tech goods to Iraq between 1985 and 1990. Rep. Doug Barnard (D-Ga.), chairman of the House Government Operations subcommittee on commerce, consumer, and monetary affairs, sought a list of the licenses last year as part

of an inquiry into whether lax controls during the Reagan and Bush administrations allowed Iraq to obtain U.S. technology used in developing nuclear, chemical and biological weapons.

Alterations to entries were discovered after the Department of Commerce turned over the list, and Barnard complained.

An internal investigation by the department's inspector general found alterations on 68 of the 771 licenses on the list, according to a copy of the report. After removing evidence of military uses and making other changes to entries on the list, the report said the permanent files at the Department of Commerce also were altered.

The most serious example cited in the report involved changing the

description on licenses for \$1 billion worth of trucks from "vehicles designed for military use" to "commercial utility cargo trucks" or simply "vehicles."

In another instance, an exporter added a written notice to a license cautioning that sensitive technology was being shipped to an Iraqi user "involved in military matters," but the phrase was cut from the document sent to Congress.

After receiving the inspector general's findings last summer, Barnard asked the Department of Justice to open a criminal investigation. Noting that the inspector general had not mentioned potential criminal conduct, Barnard said, "I believe that it is a crime to knowingly supply false information to Congress."

# Retail Sales Rise 0.6 Percent in January, U.S. Reports

By Jesus Sanchez  
and Marilyn Yaquinto  
LOS ANGELES TIMES

WASHINGTON

In an encouraging report that hinted at a budding economic recovery, the U.S. government said Thursday that retail sales in January rose 0.6 percent — a much stronger showing than expected and the largest increase in eight months.

Some economists, however, cautioned that the gains might represent a temporary rebound in consumer demand rather than the harbinger of a more vigorous recovery. The increase is also measured against the weak results of January 1990, when the Persian Gulf war depressed sales at major retailers.

Still, many hailed the most recent retail sales results as signaling a possible reversal in sagging consumer confidence. Retail sales make up about half of consumer spending, which accounts for two-thirds of the nation's economic activity.

"This shows signs of life in consumer spending," said Allen Sinai, chief economist with the Boston Co. Economic Advisors. "The key to the turnaround may be stirring."

In another promising report Thursday, the Department of Labor said jobless claims recorded a second consecutive weekly decline, with 437,000 Americans making first-time visits to unemployment offices for the week ending Feb. 1.

The number of Americans filing initial claims for jobless benefits dropped by 13,000 from the previous week's mark of 450,000, the Department of Labor said.

The Department of Commerce report on retail activity in January showed that sales rose to a seasonably adjusted \$153.5 billion, up from a revised \$152.7 billion in December, which proved to be a weak holiday shopping season. It was the biggest increase since sales jumped 1.2 percent last May.

Tracy Mullin, president of the National Retail Federation in

Washington, said the retail report represents "a very hopeful sign of the future."

She attributed the sales gains to a combination of lower interest rates, improving consumer confidence, and efforts by President Bush and Congress to do something to stimulate the economy. Improvement in retail sales is essential to a recovery from recession.

"Consumer confidence is really the key," Mullin said. "Everything seems to be building toward an optimism about the economy."

However, consumers continue to express deep worry about the economy. An ABC News-Money magazine poll released Thursday showed 93 percent of Americans view the economy's prospects negatively.

Still economists also took heart in the revised sales figures for December and November. Instead of declining 0.4 percent in December as originally reported, sales actually edged up 0.1 percent. During November, sales remain

unchanged instead of falling 0.5 percent in initial statistics.

The revisions boosted overall sales in 1991 by 0.8 percent, rather than the 0.7 percent increase reported last month. Still, it was the smallest advance since sales were unchanged in 1961.

Department stores reported the large gains, with sales moving up 2.1 percent after declining 1.6 percent in December. Building material and hardware store sales rose 5.4 percent on top of a 1.1 percent increase the previous month.

Sales of automobiles and other durable goods — products expected to last more than three years — advanced 0.5 percent following a 0.2 percent gain a month earlier.

Separately, automakers Thursday reported sales of North American-made cars and light trucks surged 22.7 percent during early February, offering some tentative hope that U.S. consumers are beginning to feel more confident about buying. But the news was

tempered by Ford Motor Co.'s record \$2.3 billion loss in 1991.

John Tuccillo, chief economist for the National Association of Realtors, said he was looking for other statistical indicators to corroborate signs of accelerating recovery: income growth, increased housing starts, stronger auto sales, and a continuing stock market rally.

"The stock market is providing a very clear message," he said. "Its recent run-ups are saying we'll be in a recovery by mid-year."

The stock market hit new highs this week but Thursday suffered a setback as interest rates rose and hopes dimmed for new credit-easing steps by the Federal Reserve. The Dow Jones average of 30 industrials fell 30.18 points to 3,246.65.

Investors have been anticipating a new move by the Fed to ease lower interest rates. But Thursday's positive reports on retail sales and unemployment claims may lessen the need.

# U.S. Backs U.N. Effort to Destroy Iraq's Ballistic Missile Program

By R. Jeffrey Smith  
THE WASHINGTON POST

WASHINGTON

The White House pledged support Thursday for a stepped-up U.N. effort to destroy Iraq's capability to make ballistic missiles, a move that U.S. and diplomatic officials say could spark a new quarrel with Iraqi President Saddam Hussein.

The U.N. effort, to be launched next week and last through the spring, will seek to eliminate machinery and production lines at four Iraqi factories that inspectors claim were used to make components of the missiles hurled at Saudi Arabia and Israel during last year's Persian Gulf war.

Officials say the effort is authorized by a U.N. cease-fire resolution accepted by Iraq that requires "the destruction, removal or rendering harmless" of the country's ballistic missiles, related parts and repair and production facilities. The equipment was identified by U.N. inspectors during visits last year to military sites.

Iraqi officials have told U.N. inspectors that much of the equipment should not be destroyed because it has other, non-military uses and is vital to the nation's economic recovery. These statements have led to speculation in Washington and U.N. headquarters that Saddam may refuse to comply with the destruction orders.

"There may be an immediate standoff" similar to Iraq's temporary detention of U.N. inspectors in a Baghdad parking lot last September following the inspectors' seizure of incriminating documents about the country's nuclear pro-

gram, one U.N. official said. But he added that strong U.S. and allied support for the elimination plan would make a confrontation less likely.

White House national security adviser Brent Scowcroft provided the pledge of U.S. support for the destruction plan in a meeting here Thursday with Swedish ambassador Rolf Ekeus, chairman of the U.N. Special Commission on Iraq, according to U.S. officials. Scowcroft said that in the event of any Iraqi effort to obstruct the commission's work, the United States would back a U.N. Security Council resolution of condemnation, the officials said. But it could not be learned whether Scowcroft and Ekeus discussed the possibility of U.S. military support for the destruction efforts.

At least 17 facilities in Iraq have been identified by the commission as sites where the government conducted research, production, testing and repair of ballistic missiles, launchers and rocket fuel. U.N. officials declined to name the sites targeted for demolition, crushing or cutting of equipment, explaining they do not want to give Baghdad advance warning of the specifics. But they said trained U.N. personnel would depart for the Iraqi capital from Bahrain late next week.

The visit marks the opening of a new, politically sensitive phase of the commission's work, involving more concerted destruction of Iraq's industrial capability to make weapons of mass destruction. This work follows nine months of inspections aimed largely at detecting, cataloging and monitoring Iraqi

missile and nuclear technology, chemical weapons and biological agents.

Of the missile arsenal, the commission has supervised destruction of everything Iraq has declared, including 62 missiles, 11 missile decoys, dozens of fixed and mobile launchers, eight missile transporters and 146 missile-storage units, by one official's count. Much of this equipment was purchased from the Soviet Union or Western European nations, although Iraq added improvements, according to commission investigators. Much was destroyed by allied air raids during the war, but certain sites were missed or remained hidden until the inspections began, according to U.N. officials.

The destruction effort is set to begin amid continuing tension with Baghdad over what Western officials believe is a residual stockpile of Iraqi ballistic missiles, and at a time U.S. officials say they are seeking to bring new pressure against Iraq to encourage Saddam's overthrow.

Also fueling the tension is rising resentment among Iraqi citizens about the U.N.-backed embargo of trade with Iraq, which has boosted food prices and created shortages of medicine and spare parts, according to U.N. officials.

On Monday, Bush called for maintaining the embargo and reiterated that "the Iraqi regime has failed to comply fully with binding" Security Council resolutions and "continues to pose an unusual and extraordinary threat to the national security and foreign policy of the United States."

# Aristide Vents Anger at U.S.

By Douglas Farah  
THE WASHINGTON POST

CARACAS, VENEZUELA

Deposed Haitian president Jean-Bertrand Aristide accused some in the Bush administration Wednesday of abandoning the fight against Haiti's military-dominated rule by easing the trade embargo, and he denounced the U.S. policy of forced repatriation of his countrymen.

In a 45-minute interview at the presidential residence here, Aristide, a Roman Catholic priest who once was imprisoned for his political views, said those being forcibly repatriated were being arrested, beaten and tortured in Haiti because of the policy of U.S. "discrimination."

About 12,000 Haitians setting out for the United States have been intercepted by the Coast Guard and held at the U.S. naval base at Guantanamo, Cuba. They are being repatriated following resolution of a legal challenge in Florida. The U.S. government has said follow-up investigations in Port-au-Prince have produced no cases of returned Haitians being persecuted.

While Aristide showed impatience with his continued exile since the Sept. 30 coup and anger at softening of the embargo, he said he had not lost his faith that he would return as president of Haiti.

Sitting beneath a high ceiling in a large room with polished wood floors, bare except for a coffee table and a few chairs, Aristide said he still believed Bush supported his cause. But he said some members of the Bush administration — whom he did not specify — were undermining the president's policy, and that the United States as well as the 34-member Organization of American States must enact a complete economic embargo if democratic rule is to be restored.

"I care about President Bush and the credibility of the Bush administration," said Aristide. "Because I care about that, I cannot accept hearing his voice say something, then see people from his administration — not all of them, but some people — doing exactly the opposite."

Asked what the opposite meant, Aristide said: "He says yes to democracy and those who kill democracy say yes to what they did about the embargo." After the coup, the U.S. government encouraged imposition of the OAS embargo — which prohibits all but humanitarian trade with Haiti. Last week, however, it moved to restore American commerce with Haitian factories where low-wage workers assemble goods for American companies.

(Bernard Aronson, the U.S. assistant secretary of state for Latin America, defended the embargo-loosening decision in a meeting at Georgetown University Wednesday night, saying it was intended to save a long-term effort at creation of jobs in Haiti. "We consider this a humanitarian exception," he said.)

# OPINION

## Addressing Cheating Requires More than Just an Honor Code

The Undergraduate Association is currently exploring the possibility of implementing an honor code in response to increasing concern in the MIT community about academic dishonesty. While any efforts to stem cheating at the Institute are a step in the right direction, attempts to focus these efforts on an honor code are wrong-headed, mere "window dressing" in the place of more substantive programs.

Cheating is a problem here in part because of the enormous pressure put on students by the Institute's high-strung atmosphere. Many students feel that in order to survive, they must take advantage of the "gray areas" of academic honesty, often stretching the limits of collaboration on problem sets until they hand in work which is not their own. Any honor code implemented in such an atmosphere will simply result in a rush of students modifying their cheating techniques to work around the code, at least in their own minds.

Before imposing an honor code on students, the administration and UA should consider making more fundamental changes. The Institute should require professors to clearly state — in writing, on the syllabus — the precise levels and forms of collaboration and use of bibles which will be allowed. It is also important that MIT designate someone, perhaps ombudsman Mary P. Rowe, to field students' questions about policies for specific classes. Otherwise, students may feel they are throwing suspicion upon themselves by asking the professor these

questions.

The best way to deal with this problem is to make students fully aware that cheating is unprofitable. This is the approach taken by the California Institute of Technology. The Caltech honor code consists of one line: "No member should take advantage of another member of the Caltech community." This simple code is accompanied by a system which emphasizes mutual trust between students and professors. The vast majority of Caltech exams are timed take-home exams, and those given in class are unproctored. Instead of a Committee on Discipline made up of professors and deans, Caltech has a Board of Control, an elected body made up of Caltech students. Reported infractions of the honor code are considered by this body, which metes out its punishments confidentially.

This honor code works because it is fully integrated into the school and is enforced by the students themselves. At Caltech, the honor code has existed since the early days of the school, and the school's policies have been crafted around the code, rather than the reverse. Though it is true that much of Caltech's system might not work at a larger school such as MIT, imposing an honor code on top of the current MIT system denies students the opportunity to show how "honorable" they are. As H. L. Mencken once said, "For every complex problem there is a simple solution — and it is wrong." Solving the issue of academic dishonesty at MIT requires far more than the simple addition of an honor code.

### Editorial

## Honor Code Will Solve None of the Institute's Problems

Matthew H. Hersch, Jeremy Hylton, Karen Kaplan, and Joey Marquez

DISSENTING

Academic honesty has been passionately discussed on campus during the last several months — particularly after the 1.00 scandal made national headlines. President Charles M. Vest believes "MIT should seriously consider establishing a student honor code and system." The idea has won support from Undergraduate Associate President Stacy E. McGeever '93 and a majority of *The Tech's* editorial board.

Unfortunately, an honor code will have no effect on the real problem: students find it profitable to cheat. The Institute must change the educational environment so that cheating is no longer profitable. When that happens, there will be no need for an honor code.

An honor code is a quick fix that only hides the problem from public scrutiny. It does little to stop the cheating that goes on and even less to change the conditions that encourage it. In the future, if students are caught cheating, it will be viewed as surprising and unusual — after all, the Institute has an honor code that insures students do not cheat.

Associate Provost Sheila E. Widnall '60's opening remarks at the last UA Council meeting reflect this kind of thinking. She objected to use of the word "cheating" in association with MIT students. She also stressed that the outside world must view academic honesty as a concern at MIT if an MIT education is to retain its value.

Widnall and Vest have also emphasized that academic responsibility is a broad issue and one that must be examined fully. Vest argued for an honor code and system "crafted by our students and faculty, and designed to operate in our environment" in the last faculty newsletter. His concern that students and faculty work together to improve the situation is admirable, but he misses the mark: We should not design a system to work in our environment because it is the environment, at least in part, that has created the problem.

## LETTERS TO THE EDITOR

### Student Attitude Toward Cheating Is Upsetting

ramifications of their actions — cheating hurts others.

Bradley Edelman '93

I was alarmed and disturbed by student commentary in *The Tech* on Friday ["UA Discusses Possibility of Student Honor Code," Feb. 7]. Jun B. Lee '94 is reported to have said that cheating is unavoidable because of the high-pressure environment at MIT. I feel it is important to note that each and every student is subject to the same overwhelming pressures. Yet not all MIT students cheat. It is possible to succeed at MIT without cheating, and I would like to think that my peers are strong enough to overcome temptation for the sake of integrity.

It is similarly upsetting to hear that David J. Kessler '94 feels many MIT students would simply disregard an honor code. Unfortunately, from other student comments I've read in *The Tech* this school year, I believe his prediction is well-founded. Students have said that cheating is no big deal, that everyone does it, and that cheating simply hurts the individual. However, since most MIT classes are graded on a curve, a cheating student in one of my classes not only hurts himself, he hurts me, and he hurts the rest of the students in the class.

Students who have maintained their integrity in an environment contaminated by corruption should be commended and encouraged not to be shy about their feelings. Those of my peers who say that cheating is no big deal and unavoidable should reconsider the

### Free Speech Does Not Protect Ethnic "Jokes"

Freedom of speech and the privilege of attending an institution like MIT imply, but admittedly do not always require, responsibility. As MIT's president, it often falls to me to defend freedom of speech and academic freedom on our campus. I do so gladly and with conviction, because it is important that our campus and society allow people to give voice to difficult questions and analyses that may differ radically from the norm.

Such defenses begin to ring hollow, however, when individuals engage in mindless, offensive, and hurtful behavior just to "prove a point." This is precisely how I would characterize the use of computer bulletin boards by an MIT student to disseminate repugnant ethnic "jokes" (as noted in a recent article in *The Tech*).

Surely those who exercise freedom of speech have a responsibility to consider the consequences of what they say. Disparaging remarks about certain groups within our community are hurtful to those individuals and diminish us all.

Charles M. Vest  
President

### Computer Network Not the Place for Anti-Semitic Humor

Editor's note: The Tech received a copy of this letter addressed to President Vest.

I'm deeply disturbed about reports that at least one student at MIT is using the computer network to broadcast misogynist and anti-Semitic jokes, even Holocaust jokes. The use

Letters, Page 7

## ERRATA

Tuesday's UA election article ["Five Teams Plan Candidacy For UA Presidential Election"] identified David J. Kessler '94 as a candidate for UAP and Shally Bansal '93 as his running mate. Bansal is running for UAP, and Kessler is running for UAVP.

The article also mistakenly reported the filing deadline for candidates. The deadline is Friday, Feb. 21.

The Countess Dorimene in Dramashop's production of *Le Bourgeois Gentilhomme* is played by Marivi B. Acuna '94, not Charlene Suwanabhand '93.

# Kowloon Food Service Shock-Detonates in Gullet

By Matthew H. Hersch  
OPINION EDITOR

I was getting all set to write a column on the counter-democratic Bonapartist tendencies of the Venezuelan paratrooper corps when I sucked down some really awful Chinese food.

I've had bad Chinese food before, but last night's was probably the worst. Because, you see, I ordered from Kowloon for the first time since they started accepting meal cards.

Over the past few months, ARA, seeking yet another way to compensate for its own inedible grub, has been searching for a Chinese restaurant that would accept meal cards. Kowloon won the toss.

I don't know how.

My experience with Kowloon goes back a little more than a year, when my roommate and I began sampling a number of Chinese services in the area. We quickly discovered that nearby Larry's Chinese provided the largest menus, best food, and most convenient

delivery, and, we discovered equally quickly, that a late-night joint called Kowloon offered probably the worst, most expensive food in the area.

We tested Kowloon many times before dumping it, and I once even ate at Kowloon's 1,200 seat restaurant in Saugus. But Kowloon was always bad, a really interesting kind of bad. It cost more than Larry's, it had a delivery minimum, and its menu was limited. Kowloon food tasted tasted indescribably odd, and had a nasty way of sneaking back up your esophagus when you were trying to digest it.

When I heard that ARA was considering Kowloon, I refrained from expressing my doubts, in the hope that Kowloon would clean up its act, or that I could trust ARA to act in the interests of common standards of decency.

They didn't.

My roommate and I ordered Kowloon Monday night, and the food was as expensive, slow, and revolting as I remembered it. With

great uneasiness I felt the roast duck shock-detonate in my gullet, the blast wave soothed only by the fat and grease coating the wretched fowl I had ingested.

Why Kowloon? Why choose that place when so many fine Chinese restaurants, like the Mandarin, the Royal East, and Larry's are so close to MIT? Was ARA so concerned with finding a Chinese restaurant open till I am that it forgot to check food quality?

This column really isn't about Kowloon — it's about ARA. Once again, ARA has dropped the ball. Instead of improving the cuisine in their cafeterias and maintaining schedules that meet their patron's needs, they turn to Kowloon and Domino's.

ARA may not be able to provide its own food, but at least it could score a deal with one of the better Chinese restaurants in the area, even if that means foregoing late-night delivery. Students want quality — they'd rather have good food sometimes than bad food at

all hours. ARA has provided this campus with enough third-party late night slop; it's about time they improved their own food or find restaurateurs that can cook.

Meanwhile, ARA has shackled me to a minimum meal plan on a use-it-or-lose-it basis. I cannot work my schedule around meal times at house cafeterias, though, so I will not eat at Walker or Next House. I will not eat Domino's or Kowloon or Networks or Lobdell, because I do not want to die.

So, it seems, I will have to buy \$1,000 worth of Oreos and paper towels at the Next House Convenience Store, and seek sustenance at Fresco's Cafe and Larry's. Perhaps, if everyone ignores ARA, ARA might even pack up and go away, far away, where they will never bother us again.

So stick it to ARA, 'cause they're sticking it to you

# Overhead Costs: A Twisted Tale of Graduate Student Funding

By Jonathan Richmond  
ADVISORY BOARD

The recent controversy about the way MIT bills graduate student research assistant tuition might be worthwhile if it opens up discussion about the way graduate student research is funded in general. There are some gross inequities which rarely enter the limelight, and it is time to see them eliminated.

First, for all those confused about what gets paid where, is an attempt to explain a formula which would be at home in a Kafka novel. In the next issue of *The Tech*, the implications of this system for MIT's least fortunate graduate students will be detailed.

Virtually all research funding which enters MIT is charged a 57.5 percent overhead. Salary-related expenditures are also charged 41.4 percent for employee benefits. When employee benefits are charged, the 57.5 percent overhead is also levied on top of the employee benefits charge. For those who already have a headache, here is the net effect on salaries in simple terms:

Salary payment	\$100.00
Employee benefits @ 41.4%	41.40
Sub-total	141.40
MIT overhead @ 57.5 %	81.31
Total Research Sponsor Cost	\$222.71

In short, to pay \$100 in MIT salaries costs a research sponsor \$222.71 — an additional 123 percent over the actual salary — whether the employee is a graduate student or another staff member. Certain research centers levy an additional overhead charge which stays in the center. MIT overhead is, in that case, charged on top of the center's local overhead, while employee benefits are charged on the salary-related component of the local overhead (while MIT overhead is additionally added on the employee benefits charge).

At a center which charges 5 percent salary local overhead and 1.25 percent non-salary local overhead, it costs a research sponsor \$236.77 to pay \$100 in salaries.

MIT overhead also applies to a surprisingly wide range of non-salary expenses. If you charge an air ticket to Washington, D.C., for example, to explain to Rep. John D. Dingell (R-Mich.) how reasonable MIT's overhead charges really are, MIT will add a 57.5 percent overhead charge to the fare. That's more than five times as much commission as the travel agent makes for actually issuing the ticket.

It's an expensive proposition to buy research at MIT whether an additional local overhead is charged on salaries or not. For the

sake of the rest of this column, let's consider a graduate student research assistant working for a department without local overhead. Got some more aspirin handy?

While the same overheads are charged for both graduate students and other employees, the benefits paid are very different. While most MIT employees receive subsidized health and life insurance and other typical employment benefits, graduate students pay for the full cost of hospital insurance, but get their tuition paid out of the money collected for "employee benefits." This is what the numbers look like for a graduate student RA in the School of Engineering over a nine-month academic year.

	Masters	Ph.D.
Salary over 9 months	\$ 9945	\$10,980
Employee benefits @ 41.4%	4117	4546
Sub-total	14,062	15,525
MIT overhead @ 57.5%	8086	8927
Total Sponsor Cost	\$22,148	\$24,453

The total remuneration received by students is actually greater than the amount charged.

Salary over 9 months	\$ 9945	10,980
Tuition	16,900	16,900
Total remuneration	26,845	27,880

Here's how the full cost of tuition is paid.

While approximately \$4,100 or \$4,500 is paid by the research sponsors into the employee benefits pool for masters and doctoral students, respectively, \$16,900 in tuition payments is withdrawn from this same pool for each of them. The resulting deficit is taken from the employee benefit money paid into the pool for non-student employees. MIT deliberately set the employee benefit levy for all employees at a rate high enough to cover these tuition disbursements, because research clients had balked at the cost of paying the full costs of tuition for graduate students on projects they supported. By spreading the tuition charge across all employees as a general employee benefit charge, MIT could disguise the fact that tuition was being charged against all research project employees. The Institute could not only hide the high actual cost of tuition, but also the fact that much of the money supposedly taken in to provide health and other benefits for the bulk of MIT employees was not being used for their benefit, but instead being transferred to the tuition account.

At the same time, the graduate students who get their tuition paid in this way do not

# Christianity and Feminism Can Coexist in Harmony

By the Rev. Susan P. Thomas  
LUTHERAN CHAPLAIN

Last August, I celebrated the 10th anniversary of my call and ordination as a pastor in the Lutheran church. The Lutheran church body of which I am a member has ordained women since 1970, although some other Lutheran bodies have yet to take this step.

Female Lutheran pastors have "come of age," I suppose, having passed the 21-year milestone. We are no longer utter curiosities, no longer pioneers in a formerly all-male domain, no longer under a "prove yourself" scrutiny by our colleagues and the people we serve. In fact, entering classes at many Lutheran seminaries are now very close to a 50-50 ratio of male and female students (as is the case, as well, in numerous other Protestant seminaries and university divinity schools). Since 1972, the campus pastor of the Lutheran Ministry at MIT has been female — a rather remarkable 20-year heritage right here.

I am a Christian and a feminist, as were my two female predecessors. Both of these appellations have undergone attack in our society in recent years, occasionally with good reason. (I must admit, however, that I am more frequently embarrassed to be aligned with "Christians" who too often seem to present themselves as self-righteous truth-holders in public discussion than I am embarrassed to be aligned with feminists. This is a great grief to me as a Christian. I'm sure this frank admission will be misconstrued by exactly those folks who know they have the truth and who are ready to discount the ministry and the message of someone who sees more ambiguity.)

But, back to the title question: Can you be a Christian and a feminist? I believe the short answer is "yes" — and I would love to discuss the longer answer with any comers, a discussion that would need to touch biblical interpretation, church history, our naming of God as mostly male (Father, Son, Holy Spirit), and our own experience.

Part of that longer "yes," however, comes to me from Dorothy Sayers, a Christian thinker (and mystery writer) to whom I will be forever grateful for the following insight in *A Matter of Eternity*:

Perhaps it is no wonder that the women were first at the Cradle and last at the Cross. They had never known a man like this Man. There never has been such another. A prophet and teacher who never nagged at them, never

flattered or coaxed or patronized; who never made arch jokes about them, never treated them either as "The women, God help us!" or "The ladies, God bless them!"; who rebuked without querulousness and praised without condescension; who took their questions and arguments seriously; who never mapped out their sphere for them, never urged them to be feminine or jeered at them for being female; who had no axe to grind and no uneasy male dignity to defend; who took them as He found

them and was completely unself-conscious. There is no act, no sermon, no parable in the whole Gospel that borrows its pungency from female perversity; nobody could guess from the words and deeds of Jesus that there was anything "funny" about woman's nature.

As a Christian, I take Jesus very seriously. As a woman and a feminist, I believe I can do the same.

## Our Windows have opened a lot of doors.

The phenomenal successes of our Windows products have opened a lot of doors.

Created the need for more and more software engineering professionals willing to share our vision of the future. And to keep our momentum going strong.

You'll find that Microsoft is a company like no other. No suits or ties here. No corporate red tape. Only the freedom to be yourself. To do your very best.

Our working environment is a portal to the future of high technology. A mecca for all

kinds of people from all kinds of backgrounds. Each lending his or her unique perspective and extraordinary skills to producing tomorrow's leading software.

We invite you to share our vision of how personal computing will provide "Information at Your Fingertips" to the world. You'll find that our doors, like our minds are always open. Come talk with us at the Minority Career Fair.

We are an equal opportunity employer and are working toward a more culturally diverse workplace.

# Grad Funding Inscrutable

Richmond, from Page 5

get their hospital insurance subsidized or receive the other benefits which research sponsors can rightly expect are being provided when they hand over payments for "employee benefits."

Let's face it: MIT has been following a highly dubious accounting practice. Investigation into this matter is highly appropriate. There are implications deeper than those yet explored, however, especially for students who do not have assistantship appointments. And, if you will kindly take enough aspirin in the interim, these will be probed in the next issue of *The Tech*.

## LETTERS TO THE EDITOR

Letters, from Page 4

of our communications technology in this way can only diminish and dehumanize the members of some groups in the eyes of others. To dehumanize is a precursor to harassment, and even to persecution and terror. If individuals want to demean themselves by telling such jokes in private, they are free to do so. But to use MIT communication facilities to greatly amplify the audience for such jokes should not be considered acceptable behavior at MIT. It is difficult enough to create a community of civility and caring where people feel safe to share and learn without being confronted with such ugly assault.

Rev. Scott Paradise  
Episcopal Chaplain

### Institute Recycling Needs Improvement

I recently spent some time at a certain Ivy League school a couple of hours south of here. Like MIT, this school is one of the largest organizations in its city. Unlike MIT, this school has made a superb effort to set an example for the rest of the city by its behavior. Standing anywhere on campus, either indoors or out, one can easily spot the recycling bins that have become so pervasive. One

can always find a bin within a few dozen meters, not only for paper recycling of various sorts, but also for cans and other recyclables.

In contrast, I have found that in order to recycle even the most common type of waste, plain paper, I have to get to an Athena terminal room. Even worse, I have managed to find only two can recycling bins on the entire campus, and one of these is in a locked room (the 6.001/6.004 computer lab), into which one is not even (officially) allowed to bring drinks! MIT has an obligation to the community, not to mention to the rest of the planet, to set an example by making a very visible and enthusiastic push towards recycling of waste.

I suggest that a good start to such a push would be to distribute recycling bins of all kinds at regular intervals around the campus. Ideally, there would be recycling bins next to every trash bin, which would make it difficult for even the most ecologically apathetic person to avoid recycling.

Samuel R. Peretz '89

### Pro-Life Downplays Significance of Roses

The Class of 1993 and MIT Pro-Life are each selling roses for Valentine's Day in Lobby 10 today. The MIT Pro-Life drop

poster in Lobby 7, posters, and booth advertising downplay the political significance of the rose as the pro-life symbol, as well as the fact that the money raised will be used to further their anti-abortion agenda. If you disagree with the pro-life agenda, please purchase your Valentine's Day roses from the Class of 1993, not MIT Pro-Life.

Emily Yeh '93  
Marcel Bruchez '95  
Claire Woodman '95  
Officers, MIT Students for Choice

### UA President Seeks Input on Tuition

On Feb. 18, the Academic Council will meet to set next year's tuition rates. If you have anything to say to the Institute on this matter, please let me know before the 18th. Feel free to call at 253-2696, 225-7131, or send e-mail to stacycmg@athena. Thank you.

Stacy E. McGeever '93  
Undergraduate Association President

## LETTERS POLICY

**Editorials**, printed in a distinctive format, are the official opinion of *The Tech*. They are written by the editorial board, which consists of the chairman, editor in chief, managing editor, executive editor, news editors and opinion editors.

**Dissents**, marked as such and printed in a distinctive format, are the opinions of the signed members of the editorial board choosing to publish their disagreement with the editorial.

**Columns and editorial cartoons** are written by individuals and represent the opinion of the author, not necessarily that of the newspaper.

**Letters to the editor** are welcome. They must be typed, double-spaced and addressed to *The Tech*, PO Box 29, MIT Branch, Cambridge, Mass. 02139, or by interdepartmental mail to Room W20-483. Electronic submissions in plain text format may be mailed to tech@athena.mit.edu. All submissions are due by 4 p.m. two days before the issue date.

**Letters and cartoons** must bear the author's signatures, addresses, and phone numbers. Unsigned letters will not be accepted. No letter or cartoon will be printed anonymously without the express prior approval of *The Tech*.

*Thursday, February 20, 10:00am-3:00pm*

Student Center — Mezzanine Lounge (3rd Floor)

Please bring 2 resumes

Interview scheduling for February 21

***This is the ideal way for you to explore career opportunities at Hughes Electro-Optical & Data Systems Group and Hughes Space and Communications Group, located in Southern California:***

- Gain first-hand information
- See if we're the Company for you
- Tell us about yourself

***We're seeking graduates in:***

- Electrical Engineering
- Computer Science
- Mechanical Engineering
- Physics
- Aerospace Engineering
- Applied Math

***You'll never know how far your education can take you until you take that first step.***

Equal Opportunity Employer. Proof of U.S. citizenship may be required.

# Ballroom Dance Club Loses Stereo, Cash Box

By George Ipe  
STAFF REPORTER

Rose M. Needham, a Campus Activities Complex assistant manager working the night shift at Walker Memorial, was cleaning up after a late-night party last weekend when she noticed that a usually closed cabinet in a storage room was wide open and littered with wires, stray electrical equipment, and odds and ends.

At noon last Sunday, Waldemar P. Horwat G, the president of the Ballroom Dancing Club, went to Walker to set up the club's stereo system for a dance session when he found the cabinet containing the equipment forced open and much of the club's property missing. Horwat immediately called the Campus Police, who sent over an officer to investigate.

"Among the things missing," said Wilson Tsang G, the workshop manager of the BDC, "were our main stereo system, a wireless microphone, a UHF infrared converter, a cashbox with about \$40, 30 ballroom music CDs and 50 cassette tapes that will be very hard to replace. The losses total about \$2,000." He said, "Though we can survive for the present with a portable music system, the most damaging part of the theft is the loss of our CDs and tapes. We'd have to pay through our nose to buy the music the club had accumulated over the years."

Horwat bemoaned the loss of the music, saying that it would take years to replace, and that much of it is out of print.

The BDC, founded nearly 20 years ago, offers three levels of

instruction in dances such as fox-trot, swing, bolero, and the samba. Over the years, its members had entered dance competitions and some had even become national champions. Horwat said, "The weekly dance sessions will still continue throughout this semester despite the theft."

"We will be trying to rebuild the club's equipment gradually. For now, we are borrowing music tapes from club members for the dance workshops. Though the sound system will be lousy for a time, we are planning to buy a new stereo system eventually," Horwat said.

After an officer's meeting at the BDC yesterday, Horwat announced that the club would offer a reward for any returned equipment and music. Ted E. Johnson, program coordinator of the Campus Activities Complex, said, "The BDC might be able to get a \$1,000 deductible from the MIT insurance policy on total losses from the theft. But this depends on the particulars of the insurance policy and the current value of the stolen items."

Needham, who is in charge of late night events held at Walker, noticed the storage room and cabinet open during her rounds there at 1:30 a.m. Saturday. She said, "It looked strange — with all the stuff lying on the floor by the cabinet, I thought some students were careless. I didn't know who the stuff belonged to, so I locked the cabinet, not realizing that something was stolen." She added, "Walker is a funny building. It's very easy to get into at all hours of the night, and I can't go check on everyone."

# City Council Approves New Zoning

Zoning, from Page 1

relations at the Institute.

The housing goal was met through the creation of an "affordable housing district" on Henry Street and a small section of Sidney Street. The density of housing allowed in this area varies with the percentage of lower-income or subsidized housing that is built. With no affordable housing, construction can reach a maximum density of 0.6 "floor-area ratio," or FAR. The FAR climbs to 1.75 if half of the housing built is affordable, Malenfant said. Multiplying the FAR for a plot of land by the area of the plot gives the total allowable square footage of any development on that land.

Existing businesses in a strip between Brookline and Sidney Streets were granted the right to expand up to 25 percent of their current FAR. In addition, property owners in the region may sell their land for use equal to or lighter than the current use. This means, for example, that a research and development area can not be converted to heavy industry.

Another business decision came in an agreement outside the zoning ordinance itself. Cambridge and

MIT agreed to create a research and development manufacturing zone over the next seven years, Eusden said. Other property owners in the area will probably join the agreement, which says that they will actively pursue manufacturing tenants. The city agreed to work on creating advantages such as improved infrastructure and tax breaks for landowners who attract suitable tenants. The area extends to the east of Sidney Street from Erie Street, and down Purrington Street.

"We wanted to provide incentives to create manufacturing jobs, but zoning can't do that. [The agreement] was the most effective means available," Eusden said.

BodySub:Controversy began in 1971

The proposal was adopted after the Cambridge Landowners' Group, which represents MIT and other area landowners, worked out several disagreements with the seven-member CRG. The groups reached agreement around 2:00 Tuesday morning, after negotiations that had run almost continuously since last weekend. The adoption of the ordinance "is absolutely unprecedented," Eusden said. "It's really a wonderful moment, a victory for the

entire city."

Malenfant said a city council member found it "remarkable that a community group took the initiative to rezone 80 acres and was able to follow through and reach a resolution" with scarcely any resources.

Members of both groups felt the city council was crucial to the adoption of the proposal. Cambridge Mayor Kenneth E. Reeves "played an instrumental role in bringing this to resolution," Eusden said. "He brought a very balanced representation from the council," she added.

Malenfant agreed, saying she thought the council was supportive, and that the "city was not on one side or the other."

city not on one side or the other, council was supportive.

MIT purchased the land in 1971 as part of what has become known as the Simplex parcel. Controversy over zoning for the area has continued since then.

### Mintz, Levin, Cohn, Ferris, Glovsky and Popeo, P.C. Project Analyst Program

In the tradition of Investment Banks and Consulting Firms, Mintz Levin has designed a demanding two-year program for college and university graduates who are seeking a challenging work environment and a position of responsibility.

Applicants should have an excellent academic background and a record of achievement in work experiences and extracurricular activities. Familiarity with computers is desirable. Exceptional communication skills (both oral and written) and analytical abilities are essential.

This program may be particularly appealing if law school is a future consideration. A representative from Mintz Levin will be interviewing on the MIT campus on February 20, 1992. Please fax or mail resumes and cover letters by 12:00 PM on February 18 to:

# Student Competes at Winter Olympics for Cyprus Ski Team

By Ben Reis  
STAFF REPORTER

Alexis Photiades '91, a graduate student in the Sloan School of Management, is currently in Albertville, France racing for the Cyprus Olympic Ski Team. He will compete in the men's slalom, the giant slalom, and the super giant slalom. This is the 24-year-old Photiades's third Winter Olympics as a member of the Cyprus Ski Team.

Photiades has also represented Cyprus in tennis at the last two Summer Olympics.

Born in Cyprus, Photiades came to MIT as an undergraduate in 1987 after serving two years in the Cypriot army. He has been a member of the MIT ski team since his sophomore year.

According to Eliot Young G, coach of the MIT ski team,

"Photiades has come on strong this season." With an excellent finish at the National Collegiate Athletic Association Division Two Eastern Championships on Feb. 2, Photiades qualified to compete in the All-East Honors, said Young. Photiades will not be able to compete in the All-East Honors event because of the Olympics, Young said.

Young hopes Photiades will finish in the top 40 in the Olympic slalom events. "He is a downhill skier, so if he comes in 5 or 6 seconds out, that's pretty respectable," he said.

Photiades has also competed in the Vail World Ski Championships for Cyprus.

## Excels in tennis

Photiades has also played on MIT's tennis team since his under-

graduate years here. Men's tennis coach Jeffrey Hamilton referred to Photiades as "Mr. Everything."

"He was number one on the tennis team his last two years, as well as an Academic All-American for his last two years," Hamilton said. Photiades was also a tennis All-American in his senior year, and has ranked ninth in the country in men's tennis singles.

Photiades has been invited to try out for the Cypriot Davis Cup tennis team.

"Alexis is one of the nicest people that I've met," Hamilton said. "The most remarkable thing about him is his humility. None of his success has gone to his head," he said.

Photiades' sister, a graduate of Boston University, is also an Olympic athlete for Cyprus and is with her brother in Albertville.

# Clinton Emphasizes Need for Change

Clinton, from Page 1

the president with not being interested in instituting the radical change necessary to resuscitate the economy.

## Draft-dodging allegations

In response to recent womanizing and draft-dodging allegations, Clinton sought to cast himself as the victim of spurious Republican charges in the last week before the New Hampshire primary.

"They did it because they know I have a message and the people of this country are coming to it," Clinton said. "Just when we were getting off the ground, these stories started coming out. In the South, we have a saying: if you find a turtle on a fence post, it didn't get there by accident."

The governor said that while the Republicans readily exploited racial and ethnic divisions to win an election, his campaign focused on bringing people together.

The Rev. Charles Stith, who introduced Clinton, charged Bush with using Willie Horton to win the previous election, and said he would use "Willie Quota" to try to win this one. But according to Stith, Clinton would rise above this because he could bring people together like no other candidate.

Others who spoke at the rally included Sid Johnson, president of the Arkansas National Education Association, who said that Clinton had greatly improved the educational system in his own state.

To bolster claims that Clinton's support remained strong, Clinton fund-raiser Robert Farmer said

Clinton raised \$157,000 at a Copley Plaza event Tuesday night — more than one-third of the \$450,000 Clinton has raised in the state, according to the *Boston Herald*.

Edward B. Garon '95, who organized a group of MIT students who support Clinton, said Clinton's speech was "very well delivered" and had a significant impact upon the audience. "The audience reaction was positive. I think a lot of people are excited about his campaign," he said.

Asked about whether or not Clinton could win in New Hampshire, Garon replied, "I am not a political analyst, but if the people of New Hampshire vote based upon the issues, then Clinton will win."

# Nationals Lead Sorority Move To Shorten, Eliminate Pledging

Pledges, from Page 1

tinguishing between pledges and brothers to the creation of life-threatening situations.

At sororities nationwide there are activities going on that would be "construed as hazing by anyone's definition ... because they are demeaning or embarrassing," Dorow said. MIT's sororities and fraternities "don't have the hazing that other schools experience," he added.

At MIT, Zeta Beta Tau and Phi Sigma Kappa have adopted shorter pledge programs. Tau Kappa Epsilon, which does not have a chapter at MIT, has also adopted

this policy.

ZBT President Carlos E. Munoz '93 said that ZBT's national fraternity instituted an anti-hazing policy in all chapters in 1989. This policy initiates all pledges immediately, eliminating any hazing or pledge period.

Munoz said there are "pluses and minuses" to the new program. He said hazing can be "detrimental to work at MIT," but that it could serve as a way of bonding freshmen together. Munoz added that hazing was largely "irrelevant" anyway, since brothers get to know each other by living together.

The MIT Muslim Student Association is pleased to welcome

**Jamal Badawi**  
to the MIT campus  
on Thursday February 20  
7:00-9:00 p.m.  
in Room 26-100

The subject of Dr. Badawi's Lecture will be:

## The Islamic Political System in Light of Recent Events in Algeria

Dr. Badawi is one of the most prominent members of the American Muslim community today. He is presently a member of the Islamic Society of North America (ISNA) Consultative Assembly and was previously a member of the ISNA Jurisprudence committee. He is founder and director of the Islamic Information Foundation of Halifax, Nova Scotia, a nonprofit educational foundation which distributes his videotapes on Islamic teachings. Dr. Badawi is best known for his numerous debates with Christian and Jewish scholars regarding various religious issues. He has lectured at universities throughout the country and is the author of over twenty books dealing with Islam.

A graduate of Indiana University in Bloomington, Dr. Badawi is currently a professor at St. Mary's University in Halifax, Nova Scotia.

Sponsored by the MIT Muslim Students Association, the Arab Student Organization, and the Pakistani Students at MIT

## Quality by Design

The shipbuilders of two centuries ago understood the value of designing quality into even the smallest part. # Jim's Journal

by Jim

I worked at the copy store today.

Afterwards, I walked home the long way, by the lake.

There were people walking around the lake, and ducks sitting on the shore.

I decided to sit and watch people go by, and listen to the ducks quack.

Steve came over today.

"Hey, Mr. P," he said when he saw Mr. Peterson.

Then he said, "Jim, look what I brought."

It was the board game, Sorry.

We played a few games of Sorry, and Mr. Peterson kept pouncing on the game pieces.

# THE ARTS

## Roadkill Buffet is the antidote to MIT stress

### ROADKILL BUFFET

At the Muddy Charles Pub.  
Feb. 12, 8 pm.

By Joanna Stone  
ARTS EDITOR

While many of you may have stayed home Wednesday night to watch CBS' coverage of the Olympics, the few of us fortunate enough to find ourselves at the Muddy Charles were instead able to witness live coverage of the "Worldwide Competition of Making Toast," complete with close-ups of the under the knee toss, the dan-druff to cinnamon addition, and slow motion retakes of the fork in the toaster mistake.

The Tech does not review comedy shows, or at least has not in recent memory. It's not because we have a policy saying we should not review comedy. Perhaps it's because we at

The Tech don't feel very funny. Journalists inherently have a peculiar sense of humor, and journalists at MIT are only more twisted, if anything. But at MIT, comedy seems appropriate — seems, in fact, absolutely necessary to relieve all the built-up tension and stress found here. And it was in this state of mind that I headed down to see the *Roadkill Buffet* at the Muddy Charles Wednesday evening, to find a bit of levity in this often oppressive environment.

And levity is indeed what I found. The *Roadkill Buffet* is an improvisational comedy group. "None of this has been planned or rehearsed," the audience is assured at the beginning and several times throughout the show. The audience is given the opportunity to choose the place, the objects, the actions that the comedians must then act out and

around.

It is in carrying out this seemingly impossible task that the comedy group members demonstrate their wealth of creativity. A strange hand movement becomes a buddha stopping traffic during those difficult rush hour jams, the same movement is immediately transformed into a position *The Joy of Sex* forgot to mention, said to hit all pressure points and guaranteed to drive any partner wild.

*Roadkill Buffet* was surprisingly politically correct for a comedy show. With both homosexual and heterosexual couplings, an audience member's tossed-in sock became a condom for a lesson on safe sex. However, under the instantaneous pressures of improvisation, there is always the danger that the humorous will cross the line over into the overly sensitive. A skit on the Mike Tyson rape trial turned sour, prompting hushed disapproval

and a rapid scene change when the actor impersonating the rape victim began to comment on the size of Tyson's masculinity.

During a skit called poets' corner, Jack Kotovsky G managed to rhyme capacitor with ambassador. It is the technical jokes that receive the greatest feedback from this crowd. Jokes about cold fusion and exothermic beakers drew roars from the audience, while the troupe's request for a literary style to work with received only silence.

*Roadkill Buffet* is probably not the kind of comedy show you'd pay \$15 and a two drink minimum to see. But it does have the feel of that sort of comedy, but in training. With free admission, however, I'd certainly recommend that all overworked students or underworked, exuberant seniors make it a point to catch their next show at the Muddy Charles on Feb. 26.

## Mississippi Masala barely scratches the surface of racial conflict

### MISSISSIPPI MASALA

Directed by Mira Nair.  
Written by Sooni Taraporevala.  
Starring Denzel Washington  
and Sarita Choudhury.  
At Loews Harvard Square.

By Danny Su

Whenever Hollywood produces movies about racial conflicts, the first thing that comes to my mind is the classic confrontation between Anglo-Saxons and Afro-Americans. From the classic film *Guess Who's Coming to Dinner*, to the more recent *Do The Right Thing* and *Jungle Fever*, the conflicts have always revolved around these two groups. Therefore, I find the movie *Mississippi Masala*, a new film by Mira Nair, quite refreshing because it defies the old Hollywood trend and attempts to explore the confrontation between Afro-Americans and Indian-Americans. Unfortunately, Nair did not execute her novel idea with sufficient strength. *Mississippi Masala* only scratches the surface of this conflict and fails to provide any deep insight.

Mina (Sarita Choudhury) was born and raised in Uganda until the age of six, when dictator Idi Amin decided to expel all Asians. Mina and her family eventually end up in a small town in Mississippi. Mina works in an Indian-owned motel while her mother runs a liquor store and her father continues to battle the Ugandan government for their lost property. Mina eventually meets a carpet cleaner, Demetrus (Denzel Washington), whom she falls in love with. When their romance is dis-

covered by their respective families, it sets off a confrontation between the two ethnic groups.

Unlike most Hollywood movies or television shows, *Mississippi Masala* avoids stereotypical portrayals of minority members. There is nowhere an Indian-American who speaks English with a thick accent and runs a 24-hour convenience store like the one found in *The Simpsons*, or an Afro-American who hangs around street corners all day long and collects unemployment benefits. Instead, we see minority members being portrayed as real human beings with feelings just like anybody else's. But, on the other hand, male Anglo-Saxons, who rarely appear in the movie, receive a different type of treatment. Whenever they make an appearance, something terrible occurs. For example, we see a crazy driver screaming and shouting at Demetrus after Demetrus rear-ended his car; a cold and uncaring banker who threatens to repossess Demetrus' van if he fails to come up the loan payment; the police brutality heaped on Demetrus and Mina during their arrest; teenagers who play loud music and trash their motel room; and an unreasonable customer who complains about the high motel room rates.

Nair does an excellent job of comparing two vastly different cultures, however. Immediately after showing a traditional Indian ritual, she switches to black children singing rap songs in the neighborhood nearby. After a traditional Indian wedding ceremony, she takes the audience to a local club where Mina naturally blends in and dances with everyone else.

There were also moments in the movie that attempt to bridge the gap between the groups. For example, Nair shows how an Indian-American motel owner attempts to resolve a misunderstanding between his friend and Demetrus by offering him tea and talking about sports. He then goes on to say that minorities should unite against all other forces. Later on in the film, Mina goes to Demetrus' house and has lunch with his family. During the preparation and duration of the meal, the audience experiences the harmony between Mina and his family as they exchange words about family values, education, and common interests.

Despite all these fine moments, I feel the film didn't accomplish its objective — it failed to explore in depth the real reasons behind the racial conflicts. A scene in which Mina and her mother are shopping in the market typifies this problem. While the mother speaks in Hindi, Mina responds in English. For a brief moment, we see a generation gap. But for the remainder of the movie, this feature disappears and we are left to wonder why. When Mina's romance is discovered, we see the agitation of both families. Although the audience can probably guess the reason behind their anger, the movie fails to show us explicitly. I think that this should have been the main focus of the film. Nair should show us both sides, but she does not. Instead, we see only a brief conversation between Demetrus and Mina's father, and a barber explaining to Demetrus that blacks can not stand to see other blacks do well in society.

My biggest complaint about the movie is

its ending. The conflict was resolved in a matter of a few seconds. There was no clear explanation of why the resolution came so fast and trouble free. Without giving away the ending, I would much rather have had an in-depth look at the resolution. And despite the title — *Masala*, which means spicy in Hindi — the romance is dull and the confrontation short-lived. This movie probably won't score well in the box office because it is very far from the mainstream. But I applaud the splendid performance turned in by Denzel Washington and the movie's efforts to show the audience a taste of a unfamiliar cultures. Unfortunately, the subject matter can not be treated lightly because that's what real life is all about. For those of you who really want to see a detailed ethnic confrontation, I recommend *Guess Who's Coming To Dinner*, which LSC will be showing later this semester.

**Fortune's Top 100!**

Xilinx, recently rated by Fortune magazine as one of America's 100 fastest growing companies, is looking for talented college graduates.

As the inventor and world's leading supplier of FPGAs (Field Programmable Gate Arrays), Xilinx has driven the programmable CMOS Digital logic market to new heights with their proprietary Logic Cell™ Array technology.

To aid in the design of FPGAs, Xilinx also offers the industry's most sophisticated set of software development tools.

Our extensive FPGA device families and enhanced development tools, combine to position Xilinx as the "Total Logic Solution".

As a result of our phenomenal worldwide acceptance, Xilinx continues to increase its commitment to customer needs and new product development.

If you are looking for a position with a fast growth, highly visible industry leader, look to Xilinx.

We currently have openings in the following areas:

- Applications
- Design
- Finance/MIS
- Manufacturing
- Marketing
- Software

Xilinx offers a genuinely creative work environment, excellent benefits and compensation package including a stock purchase plan. For consideration please send resume to XILINX, Inc., College Relations, 2100 Logic Drive, San Jose, CA 95124

## Women Gymnasts Lose 3 Meets

**Catherine Rocchio**  
TEAM COACH

The MIT Women's Gymnastic Team has had an extremely full schedule of competition this semester, with three dual meets over the past two and one-half weeks. Meets were held at Brown University, Ithaca College, and Bridgeport University. MIT travelled to Brown on Jan 29 to compete in a tri-meet against the Division I women's team from Brown and frequent Division III rival team, Rhode Island College.

Brown won the meet with a team total of 171.3. The MIT women took second place with a 152.90 over Rhode Island College's total of 129.95. The MIT team then travelled to Ithaca, N.Y. on Feb. 1 to compete against Ithaca, one of Division III's strongest gymnastics teams. MIT had their highest team score since December but still lost to Ithaca, 173.75 - 156.05.

On Saturday, Feb. 8th, the MIT women took to the road once again to compete against Bridgeport, a Division II power that gave MIT the hardest competition they will see all season. Bridgeport won the contest, scoring 182.00 to MIT's 154.15. Though the MIT women did not win the overall titles in each of the meets, the strength of MIT's individual competitors was evident.

The tri-meet at Brown University was a perfect showcase

for the individual talent on the MIT team. MIT began the competition on the uneven bars where all five competitors had strong routines. Gretchen Martin '92 completed her full routine, including a free-straddle over mount directly connected into a cut-catch and free straddle-back over the low bar for a 6.6 while Karen Oda '93 performed a perfectly executed half-twisting mount airborne over the low bar for a score of 6.3. Julie Lyren '93, while still having a few problems with a handstand-half twist on the high bar, landed a half-twisting somersaulted dismount for a 7.75.

Co-Captains Kortney Leabourne '92 and Lisa Arel '92 finished off the event with consistent routines including a backward somersault from high bar to low bar for Leabourne and a full-twisting somersault dismount for Arel earning them scores of 7.85 and 8.40. Arel's score earned her third place on the event for the evening.

Vaulting was consistent with Sandra Tan '92, Martin, and Oda all completing front-handspring vaults for respective scores of 6.3, 7.05, and 7.05. Leabourne's handspring with a full-twist was landed with a few extra taken and earned a 7.70 while Lyren and Arel each earned 8.5's for their twisting vaults. Arel and Lyren both tied for third place on the vaulting event.

Arel was the shining star of the

MIT beam team and performed her routine as beam routines should always be — with style, power, and confidence. Her round-off, standing back tuck, and two incredibly flexible straddle jumps combined to earn a score of 9.0, a new record for MIT on the event, a personal best score for Arel, and the second highest score on the event for the evening.

Leabourne's and Lyren's all-around scores of 31.15 and 32.8 earned them 4th and fifth places overall in the meet while Arel's 34.8 earned second.

The meet at Ithaca college began on vaulting where MIT had a solid beginning. Tan, Martin, and Oda all improved their vaults from the last meet and earned scores of 6.6, 7.4, and 7.55 while Leabourne had one of her best days on vaulting of the year and earned an 8.2. Lyren and Arel finished up for MIT with scores of 8.3 and 8.65 with Arel taking second place overall on the event.

The emerging strength of the MIT beam team is without a doubt Chen, whose determination and aggressive style showcased a gorgeous routine including leaps, straddle jumps, and cartwheels and earned a season's high score of 7.75.
