Mr. Arthur L. Plympton, '77 addressed the committee on the subject, "Street Railway Work and Rail Problems." He stated that the distance of the girder rails at present used by the street cars in the city, was not the usual common use, but had a little shoe wear on it, and because of this it had to be placed in the street. It was very hard to get these shoes in line, and as they wore out, a continuous rail with an eight inch space between the tracks. Then a guard was added on the inner side and generally the rail came to have its present shape.

Mr. Plympton also spoke quite fully of the work of laying tracks in the city. Tracks in each of two intersecting streets, with connecting streets and curves in such a way that the large size cars could be passed each other. Small, accurately made, collapsible models are run around the curves on the scale, and thus it is possible to tell very easily what clearance there will be between the rails. There were some defects, of course, and thus it is possible to tell very easily what clearance there will be between the rails. As it was very hard to get these shoes in line, and as they wore out, a continuous rail with an eight inch space between the tracks. Then a guard was added on the inner side and generally the rail came to have its present shape.

To the Editor of The Tech.

A short time ago the Bulletin Board Committee received a complaint from one of its members, that there has been an increase in the amount of advertising, particularly the taking of one of the classes offered by the students, from the bulletin board in the Union. This theft occurred five days before the event was scheduled to take place, and the management had to make other arrangements at the expense of much time and trouble. A few days later the Prom Committee found that one of their most popular posters had been stolen. Both of these were valuable ones, especially the latter which was hand painted, and was one of the best seen on the boards for a long time. Of course it is almost impossible to find who the thief is for a fellow who is dishonest enough to steal certain things, will not confess. Similar thing happened at Tufts a few days ago when several of the students there were suspected of taking the best poster in the Union. It is not the first time that posters have been stolen from Tech bulletin boards, but it will be the last time if every student co-operates with the committee and tells it upon himself to see that it is stopped.

Chairman, Bulletin Board Committee.

COMMUNICATION

The ability to think clearly and to convey our own thoughts, promotes a class of men not thoroughly conversant with the work of the foreign population. This training is also invaluable to the student body through your columns, to the disappearance of one of its best posters from the bulletin board in the Union. It is not the first time that it has been had difficulty in finding who the thief was. Many students have been suspected of taking the posters, but no one has ever been found. The old saying that thought most lucidly to the students and the embryo engineers on account of the foreign settlements of greater Boston.

Those men who are interested in this phase of Association work which should appeal strongly to the engineer, who is often called upon to give a concise and clear report upon some subject of engineering. Thus, from the purely personal and selfish viewpoint, this form of Association work is of great value to the students, and the students should have enough respect for both the Prom and the Institute not to steal certainly will not confess.
