BOSTON, MASS., SATURDAY, APRIL 29, 1911

PRICE TWO CENTS

VARSITY CREW vs NAVY AT ANNAPOLIS

First Race of the Season for Both Crews Promises to be Close and Interesting

TECH CREWS FIRST TRIP

Men show fine form at first Spin on the Severn

Technology's varsity crew makes its first appearance for the season in its race with the Navy this afternoon on the Severn. Word comes from Annapolis that the men are all in good condition for the race at four o'clock, and that they are making a fine showing.

W. N. GERE, '12. Crew Captain.

The squad left here on Tuesday, arriving in Annapolis in time for a practice spin on the river early Wednesday afternoon. They all stood that trip well, and made a great impression on the rowing men at the Academy. Their weight and build, as well as their clean work in the shell, were marked by the spectators on the banks. They compare very favorably with the Navy crew which has had so much more experience and work together than the Institute men.

This is the first race for the Academy eight, as well but they have five old varsity men and several from their class crews on the squad from which to pick the big eight. Their boat has shown up very fast in practice so they look to a close race when the two crews pull away from the starting line to-night on the two mile grind. Everybody is watching the race to get a good frame-up on the Navy boat for use in doping up their future races.

Of the men in the Institute shell, three have had experience in other colleges and a few of the others have rowed before but it is really a Technology crew that has been wholly developed here at the 'Stute. The captain, 'Dutch' Gere, '12 and his brother came from Syracuse, while "Stubby" Wettengel, the little cox, hails from Cornell. W. E. Barnes '12 also did some work on the water before he came to Tech. They have done a lot of hard work this spring since they found that the Alumni would back this trip and expect to get away with a very close victory.

The seating of the boat for the race to-night will be as follows:—
Bow—E. C. Gere, '13.
No. 2—H. A. Sweet, '13.
No. 3—A. K. Adams, '12.
No. 4—J. E. Whittlesey, '12.
No. 5—A. G. Herreshoff, '12.
No. 6—W. E. Barnes, '12.
No. 7—E. O. Upham, '12.
Stroke—W. N. Gere, (capt.), '12.
Cox—E. B. Wettengel, '12.

Seniors

Are you running a thesis where you have to draw up data sheets? Let us get out a neat printed, ruled data sheet on thesis paper that will look much better and will save you time and trouble. Opposite The Union The Tech Typewriting Bureau.

M. E. EXCURSION TO SOUTH FRAMINGHAM

Mechanical Engineers to Inspect the Robb Engineering Co. Plant

SPECIAL CARS

Party to leave Park Square at 2.00 P.M. Monday. Round trip, forty-five cents

Monday afternoon, the Mechanical Engineering Society is to conduct an excursion to the Robb Engineering Company, at South Framingham. The company builds all kinds of boilers, stacks, tanks, and also does much special sheet metal work. The shops and offices are of reinforced concrete and are conveniently arranged. Provision is made for having cars enter the shops to facilitate loading and shipping of the products. The boiler shop has an excellent up-to-date and complete equipment. There are four large riveters, with reaches up to eight feet in length used in the stack and boiler work. Besides the regular water tube and multi-tubular boilers, the company makes a special large vertical boiler.

The plant has its own pattern shop where special boiler fittings are made. All the boilers are submitted to a series of three tests; an hydraulic test, a steam test, and a compressed air test. All the men who are taking or will take the course in steam engineering or boilers should avail themselves of this opportunity to inspect thoroughly a well appointed boiler shop, and familiarize themselves with the way in which the work is carried on in a shop of this kind.

Many of the professors and assistants of course will accompany the party. Through the courtesy of President Robb, the party will be conducted about the works by Superintendent H. W. Brady.

Arrangements have been made with the Boston & Worcester R. R. to have extra cars run from Chestnut Hill to South Framingham and return to Chestnut Hill. To connect with the car, leave Park Square, Boston at 2.00 p.m. Round trip from Boston is forty-five cents. Men should buy B. & W. round trip tickets at Chestnut Hills at thirty-five cents per fare to Chestnut Hill is five cents.

SPECIAL TRAIN TO PROVIDENCE

HAS BEEN GIVEN UP

The idea of running a special train down to the dual meet between the Brown and Technology tracks, teams in Providence on Saturday has been abandoned owing to the lack of interest among a large number of the students here at the Institute. There were less than fifty men who really wanted to back the team in the way that it should be, or who were willing to show that they wanted to back it by signing up the slips so that the train could be ordered.

The mass meeting was not as productive of signatures as it should have been, but it was thought that many men would sign up later. Such has not been the case, however, and as the time-limit set by the railroad for the release of the train order has now been passed, all hopes of going down by special train must be given up. If there are any men who would like to go down by themselves in a special car, The Tech will try to make arrangements for its being attached to the 1.03, this noon. All such men must leave their names in the upper Tech Office early to-day so that it may be possible to carry out this idea.

INTERESTING LECTURE BY PROF. ARRHENIUS

Lecture Room in Lowell Crowded with Students and Faculty to Hear Noted Scientist

SPOKE ON THE IONIC THEORY

Prof. Arrhenius has made Notable Discoveries in Chemical Research

The large lecture room in Lowell 6 was crowded to overflowing with students, professors, and other interested persons, for the interesting lecture on "The Development of the Ionic Theory" delivered yesterday afternoon by Professor Svante Arrhenius.

Professor Arrhenius said that in the first place this new theory was really started by the hypothesis announced in 1839, by Guy-Lussac, that when two salts like potassium chloride and sodium nitrate are dissolved, a solution of four different salts may result. Then the varying height to which normal solutions of different salts rise in a capillary tube as compared with the rise of water, and the lowering of the freezing points of such solutions, furnished much material for investigation.

Professor Arrhenius himself discovered that the strength of acids was exactly proportional to their electrical conductivities, and concluded from this that the molecules which were active in carrying the current were also chemically active in the solution. He proved that potassium ferro-cyanide in solution dissociated into a potassium ion and an ion containing iron and cyanide combined. In no case was there any free iron or cyanide nor could any compounds containing only iron or cyanide be found.

Among those who helped most in the advancement of this theory were Van t'Hoff and Ostwald. At the first announcement of the theory, many sharp attacks were directed at it, but were warded off successfully. Thereafter, passive resistance and silent opposition prevented the general acceptance of the theory. It was not until the publication of Ostwald's new book on the Dissociation Theory and Inorganic Chemistry that the new views were introduced into the German Universities. England, America, and France have all followed, and it is increasingly evident that the new theory explains much more conveniently many phenomena of hitherto uncertain explanation.

There is still a weak minority that opposes the adoption of the theory, but this fact is beneficial rather than otherwise, for as a result the weakest points in the theory are discovered and further investigation is caused. Although there are still several phenomena which can not seem to be explained in the present stage of advancement of the theory, these are being gradually eliminated. In conclusion, Professor Arrhenius gave great credit to Dr. Noyes and the attainments of his laboratory in advancing chemical discovery.

MENUS OF JOINT SOCIETIES'

DINNER AT CAGE

Owing to a mistake on the part of the printer, the menus for joint societies' dinner held April 12 in the Union did not reach their destination until later. A number of these have since been distributed among the various courses, and what are left will now be placed at the Cage.

If any one who went to the dinner has not since received a menu, all he has to do is to apply for one at the Cage. However, "be moderate" in applying for them as there are a number of men who have not yet received one.

ANNUAL SHOW DINNER AT UNION THIS EVENING

Closing of the Successful Season of "Frenzied French" will be a Brilliant Occasion

FACULTY MEMBERS GUESTS

Evening's Entertainment full of Clever Stunts by Members of Show

This evening at the Union at 6.30 p. m. is the hour for the annual dinner for the cast and chorus of the Show. "Frenzied French" has so far through this season been very successful in all of its attempts. The book, music and lyrics have all been very good, and the performances have gone with unusual vigor. It is necessary to end up the year with a rousing good time this evening. All of the members of the Show want to be present to give the dinner an unusual swing.

This will be absolutely the last function of Tech Show 1911. It will be the last opportunity for those who have been together in the Show for the past two months to all be present at a function. It will be one of the many benefits to be derived from connection with the Show. The Union's best dinner is promised and after this is disposed of an adjournment will be held in the room upstairs where entertainment will be provided through the antics of the various members of the cast or chorus who feel inclined to afford amusement. A feature will be the interchanging of parts among the different principals.

Among the guests of the evening who are expected to be on hand are Bursar Rand, Professor D. C. Jackson, Professor D. R. Dewey, and Mr. Joseph Blachstein. Each of these is well known to every Institute man and are those whom one may well want to hear speak. General Manager I. W. Wilson will be the toast master. Besides, there will be several men present who have been connected with the Show in previous years and who will doubtless be able to give much interesting information and many amusing anecdotes of former shows.

CALENDAR

Send all notices for calendar to E. W. Taft 1913 Institute Committee at the Cage.

Saturday, April 29.

- 2.15 Brown Dual Meet—Providence.
- 6.30 Tech Show Dinner—Union.
- 8.00 Japanese Night Cosmopolitan Club—Union.

Monday, May 1.

- 1.00 Managing Board Meeting—Upper Office.
- 4.15 1913 and 1914 Cross Country Practice—Field.

STILL It is certainly unfortunate that it was found impossible **CHANGE** to fill a special train with rooters for the Brown Meet to-day. The enthusiasm was apparently keen, but when it came to the question of getting a crowd to take the trip,—aye, there was the rub. The failure to obtain sign-ups for the trip from even one fifteenth of our numbers was a pitiful confession of a condition at the Institute which is radically wrong. It is a confession of weakness. Spirit which is merely passive, which never takes definite shape, is no spirit at all. Let us see that we are not asleep to our opportunities but, by being among the "five ones," help to boom the Institute in all phases of her life and reputation.

BUT

It is not yet too late to show our interest in this same meet. Although it has been found inadvisable to charter a separate train for our enthusiasts, the opportunity of attending the meet is of course still open to us. A Tech man will not find himself alone if he steps aboard the train for Providence, en route to the scene of our battle to-day. Let us be thankful that the opportunity is not lost and that we may yet join the throng to cheer our men to another victory for dear old M. I. T.

LAST NEWS OF TRACK MEN BEFORE BIG MEET

To-day at Providence (only fifty miles away) our Varsity Track Team goes against the Brown team in a dual meet that promises a very close finish, and there are to be practically no rooters under the Cardinal and the Gray because of the lack of interest. The meet begins at two-fifteen and will probably be over in time to get the five o'clock train back from Providence.

The team leaves at ten o'clock this morning so that they may be rested from the car ride and the best possible condition when the first gun is fired. Brown is out for the victory but there is but little chance of her getting it if the men all show up as well as they have in practice. Coach Kanaly refuses to give out a statement on the final result but he is wearing a look that could hardly be called worried. He has said that the meet will be very close but we are all hoping Tech to win by the small score.

There should be a large bunch of fellows go with the team on a trip like this where the meet is such a short distance away but they have decided not to go. Therefore it is up to those who do go, to make just as much noise as though everybody went and back the team to the same extent, if possible. The special train stunt has of course fallen through, but there is lots of room on the regular and all who can, should be sure to go. Get down there and yell, as the Dean said "till you can't see straight any more." You can't very well back the Crew but stay with the Track Team to the limit, they will show their worth.

To the Editor of *The Tech*:

May I ask a space in your valuable columns for the following communication, the matter of which can not but appeal strongly to every Tech man and the fellow with some character as affecting seriously the interest of the Institute at large? Lately, a number of underhand practices have been brought to notice at the Institute, among a few of the men who, whether wrongly or rightly profess to call themselves Tech men. Now that only those who are ever having the interests of the Institute at heart, and are ever thinking of her good name with a view to a future success, can really be called Tech men. We all know without doubt the one reason why we come to the Institute. Simply the word "Success." Technology can only give those

TO DRAIN MARSH

LAND IN REVERE

Board of Health to Improve Sanitary Conditions and Eliminate the Mosquito

Under the authority of the Board of Health of Revere the extensive marsh lands of that town are to be drained, made into healthful, attractive land for building purposes. Revere has a larger area of marsh than any other town in Massachusetts, and the recent rapid increase in her population, together with real estate speculation, has caused the crowding out of late arrivals into these marshes. This has gone to such an extent that the resulting unsanitary conditions compelled the Board of Health to prohibit further building in one location, which fact brought considerable hardship upon hasty purchasers of building lots.

To solve this problem, the Board has decided that the only way is to remove the unsanitary conditions by draining the marsh. This will be done by cutting a system of ditches through the area in such a way as to effectually drain the ground and convert it into not only safe ground to build upon, but also into an extremely desirable location.

A further benefit resulting from this effectual draining will be the elimination of the mosquito pest. The methods used will be substantially the same as those employed under similar conditions to reclaim great areas of swamp land in New Jersey. The estimated cost of the whole job for the 100 acres that will first be drained, is only \$200, and the board is authorized to go ahead on the job without a special appropriation. If the success of this first try is up to expectations, other sections of the town will be treated the same way.

Continued from Page 2.

things that are to pave the way to the realm of success; the real success in life requires something more. What good if that something is wanting, no matter if he is a prince! It needs no further emphasis that complete success never comes to the man who is in the habit of leading a dishonorable life. It therefore pays one, while sometimes recalling the reason for his coming to Tech, to give a moment of reflection to that part of the things in life which is quite as essential as those things which only Tech can give.

I wish to apologize for the foregoing remarks, the truth of which any man with but an atom of sense can not fail to recognize. I do not pretend at all to preach any sermon which, however, is not my business. The one point I wish to make clear is that Tech is not the place for those who would, in any way, bring her discredit. That there is a black sheep in every flock is true, especially when the Institute is growing to such large proportions. In spite of her preponderant growth, let every true Tech man slacken not to preserve and protect the good name of Technology.

I shall be exceedingly obliged to the gentleman who, perhaps momentarily forgetting himself for being such, by deliberately taking a pocket-book containing personal letters from my coat pocket hung on one of the coat racks at the Physical Laboratory (Walker 1) Wednesday afternoon April 27, between 2.30 and 5.00, would avoid jots of trouble by at once returning the article in question to the Cage addressed to its owner. It contains only personal letters valuable to the owner alone, and absolutely of no use to any one else, there being not a single cent of good money in it, as that gentleman would have already found out; with the exception of an Italian paper money of small value, and a theatre ticket to both of which he is welcome if he absolutely have the need. I wish to remind him that there can be no trouble in his being discovered if he does not realize the serious situation and would rather go the whole length of the trouble. For his information, I would say that I know for certain that the article was was s... in the Physical Laboratory Wednesday afternoon, April 27, between 2.30 and 5.00 and that the Wednesday afternoon section is a small one. He can very well return the whole thing, or that part of the whole which to him is absolutely of no use by mailing them in an envelope to the Cage or 127 Newbury St. If by May 1, I don't get them, the detectives will have to call on that gentleman, which means sure trouble.

Allow me to thank *The Tech* for the use of the space in your valuable columns.
Yours truly,
Tong, Pao Tung
