VOL. XXX. NO. 80

BOSTON, MASS., FRIDAY, FEBRUARY 10, 1911

PRICE TWO CENTS

TO RAISE POSTAGE ON ADVERTISING MATTER

Pres. Taft Favors Postmaster General's Plan for Reducing Postal Deficit

QUESTION BEFORE SENATE COMMITTEE

House Rejects Appropriation Of \$50,000 For Experiment On Parcels Post

Postmaster General Hitchcock has again brought the question before the Senate Committee on Post Offices and Post Roads as to whether magazines with extensive advertising sections are paying a just rate for their circulation through the mails. Altho no decision has been reached by the Committee, and it was thought that the controversy between the Post Office and the Publishers would be dropped for the present session, of Congress, yesterday President Taft, Vice President Sherman, Post Master General Hitchcock and Senators Craine and Carter held a conference at the White House to consider the problem.

The postal deficit must be reduced and it is said that President Taft favors Mr. Hitchcock's plan to raise the postage on advertising matter. A system is being worked out by which the weight of reading and advertising matter of periodicals can be determined. The postal rate for a periodical then shall be based on the old rate of one cent per pound on reading matter and in addition on whatever rate shall be determined for advertising matter.

The Senate Committee voted an appropriation of \$50,000 to experiment on a parcel post service but the House refused to consider this matter.

WONDERFUL FUTURE

FOR RADIUM

Ramsay's Experimentation Points to Divisibility of Physical Element

Dr. A. H. Bucherer, Professor of Physics in the University of Bonn, Germany, says that the people who are losing sleep worrying about the possible exhaustion of the world's coal supply and the gradual freezing up of everything, with people turning to icicles or setting out in airships for a planet where there is still some fire left, have no cause to worry. By the time coal gives out, if it ever does, radium will be doing all the work that fuel now does, and perhaps, accomplishing things that fuel cannot do.

Dr. Bucherer is qualified to speak with some degree of prophetic insight because he is devoting all his spare time to the investigation of radium, and he makes his prediction in the light of the wonderful discovery of Sir William Ramsay, the great English scientist, that radium will split up some things that had hitherto been believed non-divisible, and in the splitting, set loose a lot of energy that Dr. Bucherer thinks will one day be harnessed up and made to drive tractably.

"The idea of elements," the Professor says, "has been completely destroyed by Ramsay's discovery that copper, hitherto supposed to be an elemental substance, could be resolved by radium into two separate substances. Physicists hold the theory that all matter is slowly decomposing, but in most cases so slowly that it is difficult to watch the decomposition. Ramsay used radium as an explosive, to dynamite copper into other things. It decomposes other substances so rapidly that it sets free a tremendous amount of energy. In this fact lies one great expectation of the scientific world."

PLANS FOR MUSICAL CLUBS' CONCERTS

Train Service From Wellesley To Boston At Midnight On Night Of Concert

TREASURER'S REPORT GIVEN

Finances Of Clubs In Much Better Shape Than For Past Few Years.

Yesterday afternoon at 5 P. M. the the Combined Musical Clubs held an important meeting in the Union. Manager Franzheim speaking first emphasized the importance of better attendance at the rehearsals and Concerts in future. Since the Winter Concert, there has been a falling off, especially in the Glee Club. While pardonable during the week before examination time, there is certainly no longer any such reason for absence. In consequence of this lack of spirit, the recent concerts have not been what they might have. The management has signed business contracts for all the Concerts and must deliver the goods or there will be a deficit at the end of the year, and the projected western trip next Christmas will fall through.

Selfridge rendered the Treasurer's Report to date, and for about the first time in the history of the Clubs there is a fair cash balance on hand. The clubs will have a special train from Boston to Wellesley Hills Feb. 21st. The twelve o'clock limited will be stopped for the return trip. The next day forty-five of the club men will be taken to Northampton. The train has not been definitely settled as yet but will probably be the 1.40 P. M. arriving at Northampton at 5.05.

A sleeper will be provided from Springfield down, arriving at Boston at 6.30 A. M. This will cost about \$1.05 per berth, but if the profit from the Concert is sufficient, the management will assume the cost. On the 7th of March there will be a concert in Waverley, and there will probably be a supper served there before the Concert. The matter of charging \$1.50 per ticket for the Spring Concert is being considered. This will secure a smaller but more select attendance; more room for dancing; better dance music; and better decorations. The Combined Clubs are to go to Notman's, 5 Park St., Saturday at 1.30 P. M. The combined and individual club pictures will be taken, and it is very important that everyone should be there, *in full dress!* If you want to dress there, come early in order to be ready on time.

MR. R. E. FLANDERS TO TALK TO M. E. SOCIETY

Illustrated Lecture on Gear Cutting Machinery to be Heard To-Day

This afternoon at four o'clock sharp the Mechanical Engineering society will be addressed by Mr. R. E. Flanders on the subject of "Gear Cutting Machines." The meeting will be held in Room 11 Engineering B. Mr. Flanders who is very well known in the Mechanical Engineering circle of this county is an associate editor of "Machinery," and is employed by the Fellows Gear Shaper Company as an expert. He comes here at the special request of Professor Haven and the Mechanical Engineering Society. Professor Haven has prepared a large number of lantern slides from Mr. Flanders book on the subject, especially for this occasion.

A great deal of interest is being shown in this meeting and a large crowd is expected. All interested are invited to attend, the course II men being especially urged to come out, as the subject is one of vital importance in their work.

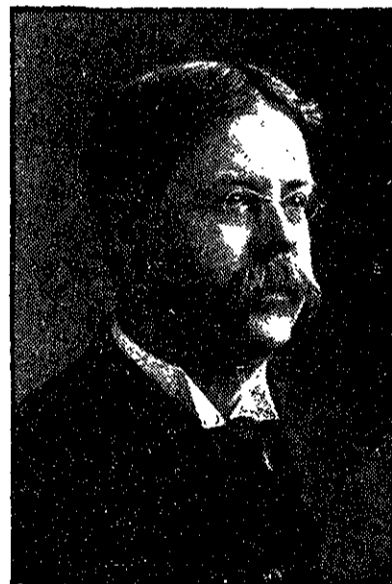

SCIENCE AND THE HUMAN WELFARE

Professor W. T. Sedgwick Speaks Before Society of Arts In Huntington Hall

EIGHTEENTH CENTURY MOST WONDERFUL

In Scientific Way.—Facts Discovered Then Applied. Later.

"The Eighteenth Century is more wonderful to me from a scientific standpoint than is the nineteenth" declared Professor W. T. Sedgwick in his lecture on Science and Human Welfare before the Society of Arts in Huntington Hall Wednesday evening. This was the century of revolutions—the French and American ones, and the Industrial revolution with steam,—the time when Chemistry ceased to be Alchemy, and Geology and Biology first came into prominence. There was a general Scientific Renaissance.

Prof. Wm. T. Sedgwick

It was not until the nineteenth century, however, that scientific principles began to be applied for the benefit of human welfare. In 1766, the first scientific school—one for mining work—was established, at Freiberg in Saxony. In this century also the first state hospital and the first state lunatic asylums were organized. This was all a development from the rich store of facts that had been gathered together and correlated in the previous hundred years.

"Science," stated the speaker, "is simply organized knowledge." "Organized" to a Biologist means arranged like a living organism, and highly organized means arranged like the parts of the higher animals. In such an arrangement, the parts work first for themselves, and then for the rest of the body. The parts of science are the truths discovered. Like a living body, Science must be capable of changing or rearranging its parts. It must also show growth, and must have reproductive powers in order to create new bodies of thought.

Science as a practical thing began to take hold of the people after the wonders of the cotton-gin and the steam engine became known. People began

VARSITY BASKET BALL TEAM PLAYS DARTMOUTH COLLEGE

The Last Game of the Season Will Be the Fastest and Closest.

WASHINGTON'S BIRTHDAY

Dartmouth and Tech Alumni Have Both Been Appealed To and Have Both Given Much Encouragement To Their Management.

All the final arrangements for the Dartmouth game in Tech Gym. on the twenty-second of February have been completed and the signed contracts have been returned by the Dartmouth management. The game will take place at eight o'clock on the evening of the holiday and will be the only big college game that is played in this city this winter. There will be a large number of Dartmouth Alumni and students present to back their team and they will have a special section of seats reserved for them in the stands. The Dartmouth management have sent out a large number of cards of special invitations to their former students now living in Boston and from those cards have some a note of loyal support. The Varsity management is doing the same thing and at the same time through the columns of the Tech they want to make a call for the support of every loyal Tech man on the night of Washington's Birthday in the Gym. This will be the last game of the season and the one that will be of the most interest to all college men for the Dartmouth team is one that will give the Varsity all they want in the line of basket ball even in our Gym.

The team has been supported by the fellows this year better than for a long

FRIDAY FEBRUARY 10, 1911

The editor understands that there is no exhibition of show posters planned for this year. We enjoyed last year's exhibition so heartily, that we hope that the pleasure will not be denied us this year. A number of the posters submitted, may be remarkably good and yet not merit the choice for the show. The only recognition that a losing competitor can receive for his work is in this exhibition, and it is to be regretted that the nature of the work of the lyric and music writers is not such that it can receive similar recognition. The fact that a contestant loses in the poster competition, by no means condemns his work as inferior, for the competition has in recent years brought out much clever work among which the selections of the most suitable has been no easy matter. The posters ought to be worth exhibiting, so can't we have a chance to see them before they are returned to the artists. Posters are in demand for student's rooms so why not add a little excitement to the affair by holding an auction sale of those posters with which the artists are willing to part.

IN THE LIMELIGHT

The Civil Engineering Society will hold its first meeting of the term this evening at 6:30 in the Union and it will be in the form of a dinner to the faculty of the department to show proper appreciation of their recent gifts. This is to be the one big meeting of the year where everyone comes for a good time, and from all reports hilarity will reign supreme.

All members who have not secured pins or signed the constitution should do so at this meeting. Plans for the term's work will be announced. Members should secure their tickets by this noon either from the officers or at the Cage. The Technology Southern Club will give a dance on Saturday evening March 4th at the Hotel Tuileries, Commonwealth Ave. Dancing from seven-thirty until twelve.

(Continued from page 1)
to leave their workshops at home, and go to the factories, and soon conditions grew very bad. However, this condition was remedied, and now it is more than probable that the factories are cleaner and more healthful than were the cottages of the older workman.

In Scientific education in this country, the Troy Polytechnic Institute led. The Sheffield Scientific School at Yale, and the Lawrence School at Harvard were founded soon thereafter, and Dr. Jacob Bigelow, first holder of Count Rumford's Chair at the latter place, was a great helper of our own institute. This man wrote a book in 1820 on the application of science to the Useful Arts. Lucretius had long before advised that people look into the nature of things in order to decrease superstition—that uneasy dread and fear characteristic of ignorance. We now look on life and death with calm through the glasses of science.

Other ways in which the human welfare has been aided, is by the discovery of the bacilli of the different diseases, by improving heating and ventilation, and by vaccination.

(Continued from page 1)
time, and the management ask that this spirit will continue through the remainder of the year. We want you to be in the stands cheering, and not down town at some show, the show will be in town the next night, but your chance of backing the basket ball team will be gone for this year. We want to ask you not to make any dates but for the game, we want to make them for the game and to keep them. The game will be fast and close from the start and will furnish a good evening's entertainment. There are men, here, who have never been to a basket ball game since they have been in the Institute at least and we want you to come around and see what we can give in the line of amusement. We want you to come and cheer and show that you really are a Tech man, that Tech really has some life, that can be shown in her own Gym as well as at the Arena. The Alumni backed us loyally on our trip and gave us what might be called a royal reception. We want you to back us, no reception or flowers, but simply your presence at that game and your voice in the cheering section. The whole thing to be done is for you to get out of your rut, plan to come to the game right now, and when you are asked what you are going to do on the holiday, tell people that you are going to see Tech beat Dartmouth in the last and fastest basket ball game of the season and then make them come too. Dartmouth College has been appealed to to support their team and the Dartmouth Alumni as well; they have responded readily, the same may be said of the Tech Alumni and now the appeal is brought right home to you, every man in the Institute. We want you to back Technology on the night of the twenty-second of February and not to plead, that you have some other engagement, just don't have any other. Remember the time is eight o'clock, Feb. 22, the place is The Gym, and the victim is Dartmouth. Be there, every body, and prove to the management that you appreciate the trouble and expense that they have been through to arrange the game, and to the Institute and the world that you are a Tech man and are proud of the fact. All together and down with the Green.

THIRD ANNUAL BALL OF CADET CORPS

Annual Affair Has Proved A Great Success During Past Two Years

The officers of the Corps Cadets have decided to hold their annual Military Ball in accordance with the precedent established two years ago. At that time the officers ran the ball as experiment, it being the first time such an affair was ever held at the Institute. The affair was a success socially but far from such financially. Last year the affair was held again and it was an excellent success socially and no money was lost.

A committee of six consisting of Norton, First Lieut. Chairman, Sherman, Barnes, Salisbury, Smith and Richmond has been appointed to have complete charge of the arrangements. The affair, as the plans so far show, will probably take place at Howe Hall, March 3, 1911. It is the only affair that is run by a class outside the Junior Prom. but it is hoped by the committee that the upper classmen will not look at it as an exclusive Freshman affair but that it will be supported by all who like a good time. Invitations are sent to different preparatory schools who send their officers. This gives the affair a decidedly "braid and gold" aspect. The Lynn High School Girls Corps Cadets usually sends a goodly number of fair soldiers who wear their own distinct style of uniform which is, to say the least, extremely natty.

WINCHESTER

Repeating Shotguns

USED IN THE U. S. ARMY.

The U. S. Army authorities *know* a gun; that is why, when they decided to equip some troops with repeating shotguns, they selected the Winchester in preference to all other makes. The experts of the U. S. Ordnance Board also *know* a gun; that's why, after submitting a Winchester Repeating Shotgun to all sorts of tests, they pronounced it *safe, sure, strong and simple*. If you want a shotgun—buy the one whose strength and reliability led the U. S. Army authorities to select it and the U. S. Ordnance Board to endorse it—that's the Winchester.
