INVESTIGATION OF 1913 TECHNIE ELECTIONS

INSTITUTE COMMISSION DISAPPROVES OF POLITICAL ELECTION

The executive committee of the Institute Committee express the great disapproval of politics as evidence in the election for the 1913 Technique production-office. The committeemen expressed their disapproval of the politics as evidenced in the election for the 1913 Technique Production-Office and that no all the Electoral Committee taken the action is to be here mentioned, but to be done by the Institute Committee on the first offense and his name be added to the list of persons not to be considered for office in the future.

APPROPRIATION OF FUNDS

Upon a recommendation by the Executive Committee, the Institute Committee would have demanded appropriation of funds.

DARTMOUTH OUTCLASSED TECHNIE IN BASKET BALL GAME LAST NIGHT

Freshman Badly Beaten by Sophomores in Slow, Rough Game.

The most important home game for the Tech Basketball team was played yesterday afternoon at 4.30 o'clock. The Sophomore defeated the Institute by a score of 35 to 8. The home team worked hard, but for some reason were not able to put up as good a game as they have herebefore. On the other hand the visitors seemed to be in the lead of a goal by the second game from start to finish. The Sophomore played the game in the Union, Tuesday night. Both games were characterized by much rough and manly man.

TECHNIE MEN WRITE SHOW SONG IN 15 MINUTES

Vose and Denison give Display of Talent at Fast Music Writing

"Wanted—a new song, with words and music within 15 minutes!" was the dictum of Coach Eugene Sanger the secretary of the music department. The action of the Lincoln French was a long discussion held in regard to the first offense and his name be added to the list of persons not to be considered for office in the future.

Mr. H. W. Clark, Chemist of the institute and director of the famous laboratory experiment station, will address the Tech students on the subject of French. Mr. Clark is the secretary of the senior class and at one time the French correspondent—rose to the occasion. "Ding-a-ling" went the telephone. It was Vose—fourteen long minutes to get the song into the concert. There is wisdom, wit, and humor in plenty among the pretty girls of Tech since 1911; but none can cool our popularity—cooling a finished product—of a song every fifteen minutes.

Orchestra Plays for C.E.S. and in Hook Night

The technique orchestra gave a concert at the Somerville Y. M. C. A. Good programs were well attended. Club will Play for C.E.S. and at Somerville Y. M. C. A. This was the first performance ever given by this organization outside of the Institute, and the members of the orchestra are to be congratulated on the success of their first concert. The orchestra will play for February 23, and will play in the Union on Hook Night.

EDUCATION COM. REPORTS

In the senate Tuesday afternoon the committee on education reported favorably on the petition of President Mac-

COMMUNICATION

Some years ago there was a noted irregularity in the Institute banners and insignia. At that time it was deemed of importance to have a uniform letter—the T—which should be used as the Institute letter. The standard shape of the T is seen on the certificate given to T lodgers and on the triangular pennants sold by Machlachlan. We feel that this T should be distinctive for all Institute purposes. This sentiment has been widely violated; for example, publications, drawings, banners, tickets, posters, and class pins.

Every Institute man should take a pride in preserving the distinctive feature of his class, and this communication is written in the hope that those in authority in the many activities will preserve this further distinctive feature of our school.

W. C. Hall, M. L. Forbes.

IN THE LIMELIGHT

F. H. Aschard, 1913, has been appointed to the Union House Committee.

Last week's attendance at the dining room broke all previous records.

Hook Night will be held Friday, March third, instead of February twenty-fourth, as originally planned. Strings are coming in fairly well, but many are more desired. Entries should be addressed to H. M. Davis at the Cage.

Oh you Gaiety the night before the holiday, and by the way, have you got your Math done for today?

Patronize the Union Dining Room by the way, sir.

Wilson, 1914, has shown a good development in the short dashes. About a year of consistent work should make him wonderfully fast. All the previous sprinters who have shown early promise at the Institute have "blown up." Let a new example, Wilson.

Thompson and Guething, the new men, are making a decided improvement.

Dalympool has been winning a place in every open meet around here this season.

Looks as if that Hockey team was as good as most of the Intercolligate Hockey Leagues. Why not join it?

You can pay the price of FOWNES GLOVES and not get Fownestyle, fit for our service.

The following article appears in several of to-day's Boston Papers. The Tech is republishing it without any responsibility for the story.

Despite the traditions handed down of 60,000 Alumni and generations of Tech men, the opinion of the undergraduate student body is that the yell should not be abolished. Col- lege house presidents, students, and T. E. Senior, 1913 says as follows: "The most foolish thing is to think it is a poor cheer. With each package of Fatimas you get a popular actress' photograph, a genuine cigar box, and a handsome 5½ by 7½ postcard for 100c."

Mr. H. W. Clark, Chief Chemist of the State Board of Health, conducting the talk, was given by Mr. H. W. Clark, Chief Chemist of the State of Massachusetts.

Mr. Clark took for his subject "The Various Methods of Water Treatment and Purification." His talk was conducted with a basis on the history of the branch of sanitary science, and that of the progress in this line was due to the work of Dr. S. M. Schmidt, Professor of Biology, formerly connected with the Institution, and to the very able work of Professor Sedgwick. The oldest method of Water Purification was coagulation, which is now used to put the coagulation of the water in large impounding reservoirs where, through the action of sunlight, oxidation, sedimentation, etc., the bacteria are killed and the water purified. A sufficient length of time for these processes to go on is essential to the proper purification of the water.

In the city of Lawrence, Mass., where typhoid epidemics have been of frequent occurrence, it was found necessary to store the water in a lake for a period of twenty days before using, since it was found that thirty days was sufficient to kill the B. Coli, thus Typhoid Bacilli could live for a period of twelve days. A second method of water purification, that of Slow Sand Filtration, which first came into use about five years ago. The use of this system has increased from the amount of four million people drink water that has been filtered in this manner. It has been found beneficial in preventing typhoid and other diseases of the water. This treatment depends of course on the length of time for the water in hand to pass through the sand filter and the sand acts as a kind of sedimentation. There are no objections.

A third method is that of Mechanical, or Rapid Sand Filtration, where the first method is one of chemical precipitation, Alumimium sulphate generally being used, and then the precipitate removed by a rapid filtration through a relatively thin layer of sand; more color, sediment, turbidity, etc., can be removed by this method than by the first mentioned one, and a better looking water is thus obtained.

The addition of chlorine, which causes the coagulation of the precipitate, has increased the importance of water treatment.

Another and more modern method of water purification is by the use of ozone, and the efficiency of this method has been found to be the electrical capacity, that of the ozone, and the application of the electricity of ozone and mixing it with the water.

With an attendance of forty men, the Biological Society gave its first dinner, and this one was given at the State College while Mr. Schidell was presiding, and its close a most interesting talk was given by Mr. H. W. Clark, Chief Chemist of the State of Massachusetts.

The dinner was served in one of the small dining rooms, President S. M. Schmidt, Mr. George A. Palmer, Research Assistant in the Sanitary Research Laboratory and Sewage Experiment Station, has accepted the position of Sanitary Inspector in the Division of Medical and Sanitary Inspection of the New Jersey State Board of Health. Mr. Palmer has been at the Institute for four years, obtaining his B. S. degree in 1909. Since then he has worked in the laboratory. Before coming to the Institute, Mr. Palmer obtained his B. S. degree from the University of Rochester. Mr. Palmer enters on his new duties on March 1st. He is the seventh Tech man from Craney VII and XI who has enlisted with this state board of health.
COMMUNICATION

The Tech—

Editor, The Tech—

It seems particularly appropriate that the academic society, especially all the professional student societies, should come together for the celebration in commemoration of the birth of the Institute just fifty years ago this April. The Electrical Engineering Society is inviting all professional societies to join with it in holding a banquet on this occasion, April 12. The Progressive Committee of the Electrical Engineering Society has arranged for Mr. Frank J. Sprague, a noted consulting engineer of New York, to be the principal speaker of the evening. President Machairas, in so much in favor of such a celebration by the students and has consented to attend and to speak.

Frank J. Sprague is a graduate of Annapolis but his fascination for engineering led him to resign from the navy to enter the engineering field. He was an early associate of Edison but soon went into the held independently. His most noted invention multiple-unit control for electric trains, gained for him the title, "Father of Electric Trains." This ability as an inventor has not, however, kept him to any narrow technical field as evidenced by his recent proposal on behalf of financial and engineering interests, for the equipment and operation of a seventy-five million dollar subway in New York City. He is a past-president and member of the American Institute of Electrical Engineers and of the New York Electric Society; also a member of the American Society of Civil Engineers, United States Naval Institute, the Institute of Electrical Engineers and the Institution of Civil Engineers, the latter two of Great Britain.

Two years ago I had the pleasure of listening to an address by Mr. Sprague and from this I felt safe in saying that although the subject for the joint meeting has not been definitely arranged, we are about to talk about broad lines, to interest every man at the Institute, Professor Jackson, an old friend of Mr. Sprague, assures us that we have the man for the occasion. As this should prove of very general interest, I trust it will receive the active and enthusiastic support of "The Tech." Very truly yours,

L. F. Farra, President, Electrical Engineering Society.
