VOL. XXXI. NO. 124

BOSTON, MASS., FRIDAY, MARCH 15, 1912

PRICE TWO CENTS

RELAY TEAMS HAVE CLOSED SEASON

Men of Both Squads Do Fine Individual Work—Good Material Left.

In reviewing the past Relay season it is unfortunate that the results are not better for Technology than they are, but, considering the fact that both teams were bothered by untimely accidents, it may be safe to say that more auspicious conditions would have resulted in a more successful season, for the teams were by no means slow, there having been several men who bettered the indoor track records at the Gym.

The first call for practice in November brought out many men, among whom were the few that were left from teams of the preceding year, Thompson, '13, and Guething, '14, 6 forming the nucleus of the one-mile squad, and Marceau, '12; Germaine, '13; and Bylund, '13, for the two-mile, Munch, '13, and Bolton showed fine speed, as did the two Freshmen, Hann and Barry. The first race was held with the Dartmouth one-mile team at the B. A. A. Meet on February 30, where Benson, Bolton, Munch and Guething ran for Technology in the order named. The race was close throughout, the first two men maintaining a small lead. An accident occurred, however, during the last lap and Guething was forced to follow his man in.

Two weeks after the defeat by Dartmouth both quartets journeyed to New York and entered the championship relay races held at Columbia University. Thompson took the place of Munch on the one-mile squad, and with this exception the team was the usual one. Here in these races the

(Continued on Page 2.)

POSTER COMPETITION.

Prize Poster Decided Upon—Dance Orders Out March 25.

At a meeting of the Prom Committee yesterday afternoon the prize poster was decided upon, and plans made for its reproduction. The successful contestant is R. H. North, who has designed a very attractive and significant poster of three colors. It will be put on sale as soon as it can be reproduced.

It was also decided at this meeting to issue the preliminary dance orders March 25th, while the regular orders, invitations and admission cards will be ready for distribution April 1st.

There is to be a man in the Union from 1 to 2 P. M. every day from now on to sign up men for the Prom. Up to the present time the signing up has gone on very rapidly, two-thirds of the number needed to make the affair a success having already pledged to go.

ELECTROLYSIS LECTURE.

At 4 o'clock this afternoon, in 23 Walker, Professor Goodwin will begin a series of lectures upon the subject of Electrolysis. This course of lectures is optional, and is open to the Seniors, Juniors and Sophomores. Although this course is not all compulsory, the subject is one which would warrant a large attendance.

MONSTER MASS MEETING IN HUNT. HALL AT 4 P. M.

President Maclaurin to Speak at Official Demonstration of Student Appreciation.

President Maclaurin will speak this afternoon in Huntington Hall, at 4 o'clock, at the big student mass meeting which has been called for the undergraduates' deep appreciation.

There are no men in the Institute who were not surprised, and pleased, when they read in THE TECH yesterday morning of the tremendous sum of money which has been given to the building fund for The New Technology. There are no men in the Institute who have not the time to attend the meeting, and the logical conclusion is that there will not be room enough in the hall for the last man to even get his head in when President Kebbon of the Senior class calls the crowd to order and presents the President of the Institute, Richard C. Maclaurin, to whom so much is due.

Following is the call issued by the President of the Senior class for this monster mass meeting:

Knowing that every undergraduate is extremely gratified at the unexpected and magnificent gift which the Institute has received from an unknown benefactor, and realizing that a demonstration of our appreciative interest is most opportune at this time, a mass meeting is called this afternoon in Huntington Hall, at 4 o'clock.

This gift, coming at the crucial time, means more to Technology than any other single event of recent years, with the single exception of the inauguration of President Maclaurin, and every Tech man should be present at the meeting to honor the President, who will speak to us, and the unknown benefactor and well-wisher of Technology.

(Signed)

H. E. Kebbon, 1912.

This call will doubtless be heeded by all loyal Tech men and the old hall will ring, as in former years, with the vociferous appreciation of the undergraduates. This is an occasion that has no equal in the past, and it will probably never be duplicated, and those who do not avail themselves of the opportunity and help make the event the biggest celebration in honor of this greatest gift will regret it deeply and long.

HARE AND HOUNDS' RUN

Should Be Successful—Good Attendance Expected.

The Hare and Hound Club has had its posters on the bulletin boards for tomorrow's run at Needham for several days. Those who took the Needham run in the fall will remember it as an exceptionally good course, which runs through rather pleasant country, passing along river banks and through pine groves.

There will be a marked difference between this run and that held at Newton last Saturday, in that there are practically no hills to climb. The runners will probably cover from seven to eight miles, but Coach Kanaly promises an easy pace. He hopes to see a good number at the Back Bay station ready for the 2.02 tomorrow, and believes that those who go will not regret it when it is over.

FAST SOPHOMORE TEAM MAKES CLEAN SWEEP

Brilliant Playing, Supported by Nice Team Work, Brings Every Game.

Last Saturday night the Sophomore basketball team finished one of the most successful seasons in the history of basketball at the Institute. The team played a strong schedule of nine games and came out victorious in all of them.

On Friday, November 17, the following men reported at the gym for the first practice: T. F. Comber, W. G. Tirrell, J. M. Henderson, C. Ruoff, C. Fox, C. Bryant, W. H. Price and F. Williams. Of these, Comber, Ruoff, Henderson and Tirrell played together on the Freshman team last year. Although only a few men came out for work, they all stuck to it with a will, with the result that a championship five was turned out.

Comber, the team's captain, was the star player of the aggregation, and ran the five in fine shape. Besides being fast on the floor, he has a good eye for the baskets and his passing is the result of long practice at the game. Williams has been pushing Comber hard for first honors with his fast all-round work. His playing at guard has spoiled many chances for opponents in a game, and his shooting has been first-class all the year.

Tirrell, who played the other forward position with Comber, scored more baskets than any other man on the team. At center, Ruoff has been playing a hard game and at times he gave some exhibitions of very fast work. Typhoid fever robbed the team

(Continued on Page 3.)

M. A. H. S. CLUB MEETING.

Pleasant Entertainment Planned—Victrola Secured.

The Mechanics Art High School club will tonight hold its second meeting of the year. The success of the form of the previous meeting has led the committee to repeat it with amplification. The program will consist of a card party, the winners of which will receive Technology favors. This feature has always proved a success at the club entertainments.

A musical entertainment will then be given, several of the members taking part. This portion of the meeting will be after the style of the popular vaudeville show. As several of the members of the club are with Tech Show this year, the success of this seems assured. The club has secured the use of the Victrola for the evening, and the records will be played at intervals. Refreshments will be served.

Members desiring to attend, and who have not yet notified the secretary, are requested to leave a note at the Cage for M. Paris this morning, signifying their intention of going.

ORCHESTRA REHEARSAL.

There will be a rehearsal of the Technology Orchestra in the Union this afternoon, at 4.15 o'clock. All of the musicians should be present, as some important numbers will be practised.

DORRANCE ELECTED EDITOR-IN-CHIEF

Committee Elected to Arrange for Competition for Art Editor.

The 1914 Technique Electoral Committee has announced the election of Arthur C. Dorrance of Bristol, Pennsylvania, as Editor-in-Chief. Dorrance was Vice-President of the Freshman class last year, and was also on the class theatre committee. He ran on the 1914 relay team which broke the Field Day record last fall. He is a Sigma Alpha Epsilon man.

Ralph D. Salisbury of Chicago, Alfred T. Wynman of Fitchburg and Robert J. Wiseman of North Cambridge, were elected as a committee to arrange for a competition from which to elect an Art Editor. The editor will be elected from those who make a creditable showing in this competition.

DO NOT WASTE TIME.

Dr. O. P. Gifford Delivered Fine Talk in Union.

Yesterday, Dr. O. P. Gifford spoke in the Union on the subject, "Wealth from Waste." He started his talk by reading the story of the miracle of feeding the 5,000, and emphasized in particular the fact that the disciples were told to gather up the remainder after the crowd had finished. Dr. Gifford called his hearers' attention to the fact that it was not some minor person who thought of making the saving, but the Leader and Chief of the assembly. So it is now, the provident man is the man at the head of great undertakings. Crowds never save, young people never are inclined to, but the man who does is he who is ready for an opportunity when it is offered.

He mentioned several things that can be and are wasted, but said that time, least of all, should be among them. "Time is one thing," he said, "that no one can get a monopoly in; no one can corner, and of which everyone can have all there is. When Adam was the only man on this footstool he had all there was, and now each one of the ninety million people of the United States also has all there is. The father of the prodigal son could make good the money and the clothes that his son had wasted, but he never could replace the time lost. Nobody since has found a method for using time twice."

Dr. Gifford suggested the great

(Continued on Page 2.)

CONVOCATION.

The mass meeting to be held this afternoon in Huntington Hall is an affair which every man should attend. We have few enough of these meetings, and there has never been one before with the motive that this has behind it. These convocations give us our chance to refute the charge that is so often brought against Technology men, namely, that they have no college spirit. We were able to contradict this feeling in our last meeting, held a few weeks ago, on the occasion of the unveiling of Mrs. Rogers' portrait.

Let us all get together, then, this afternoon, not only to show our benefactor the way Technology men have appreciated his magnificent gift; but also to strengthen the feeling between man and man which is surely and slowly cementing us into one great brotherhood.

TECHNICAL EDUCATION.

The ancient controversy between the Classical and Technical schools as to which is in the higher branches of the tree of practical use in the business world has come in for much discussion lately in the daily papers. It might be interesting to give part of an interview granted by Thomas Alva Edison, America's greatest scientist, to a reporter of the "Yale News." We quote from the edition of the 12th instant. In regard to his personal experience with college men, Mr. Edison said:

"I have had greater experience with graduates of the Massachusetts Institute of Technology than with those of any other educational institution, having had, at one time, thirty of them in my employ. And let me say right here that I would employ almost any graduate of that institution who came to me, and would not argue as to whether his salary should be \$15, \$20 or \$25 per week at the outset.

"The scientific schools run in connection with the great universities are good, but cannot help being somewhat inclined toward the classical education. A graduate of one of these scientific schools is much better trained for practical business than the graduate of a college who has specialized in books at the expense of the figures so necessary to the student at the scientific school.

"In my business, if a Yale or a Harvard man should come to me for employment, I should probably say that there was no place vacant, for I believe that a man without an academic education is as well fitted for my employment as a college graduate, and probably will learn the details quicker. Therefore, while I believe in education, I also believe that a technical education is far better than any other kind, not only in my business, but in practically all others with which I am acquainted."

Although acknowledging Mr. Edison's great experience we do not entirely agree with his views as stated in this interview. Instead of trying to remain a purely technical school, the Institute has endeavored to broaden its course by the addition of General Studies, thus introducing the classical element.

The purely technical education has the disadvantage of turning out specialists who are only versed in one particular line of business, and who often become mere automatons; this then is obviated by placing classical subjects in the respective courses.

We proffer the editor and staff of the "Yale News" our congratulations on the broad and fair-minded policy of their paper.

A. S. M. E. LECTURE—MECHANICALS INVITED

Poppet Safety Valves Will Be Subject of Paper by Engineers.

The Boston branch of the A. S. M. E. will hold a meeting at 8 o'clock next Friday evening in the Edison building, 39 Boylston street, to which all course II. men are invited. Prof. E. F. Miller and Mr. A. B. Carhart will discuss a paper written by them on "The Discharge Capacity of Poppet Safety Valves."

Mr. Carhart is a representative of the Crosby Safety Valve and Steam Appliance Manufacturing Co., which is engaged in the manufacture of these valves. The poppet safety valve was invented over 60 years ago, but did not come into general use until about 30 years later. The Crosby Company own the basic patents at present. Last year, Prof. Miller, in charge of course II., increased their efficiency 15 per cent after conducting extensive experiments in the laboratories of the Institute. He carried out the tests personally, and it is this part of the work that he will discuss at the meeting. Mr. Crosby, however, will discuss the valves from the viewpoint of the manufacturer and the operator of steam plants. In this way the subject will be very thoroughly presented from both its theoretical and practical sides. It is indeed a rare opportunity for those interested in the advancement of steam engineering to obtain valuable data regarding safety valve design and construction.

DR. GIFFORD.

(Continued from Page 1.)

water power developments as examples of wealth being made where the rivers used to waste all their power on the rocks. Cotton seed used to be thrown away and now makes the grower a profit larger than his regular cotton crop, when, after a trip to Europe, it returns and is sold as oil.

All these things we can save by simple mechanical means that take no account of the wish of the thing used, but if our own waste energy is to be turned to its best account we must make the effort individually, for no heavenly power can succeed unless we are willing to help.

RELAY SEASON CLOSED.

(Continued from Page 1.)

two-mile team entered their first contest and was undoubtedly the best that had been put forth for some time. However, both went down to defeat, the crack Cornell runners winning the two-mile, and Syracuse taking the mile in exceptionally fast time.

Notwithstanding the unfortunate defeats which they had suffered, both prepared to go against Harvard at the Armory meet in Providence on February 22. During the interval the practice was severe and the men were in fine condition for the contest. Harvard entered the best team that she ever had. Germaine, Palmer, Marceau and Bylund in the two-mile and Thompson, Guething, Bolton and Benson in the shorter relay, represented Technology. Both contests were one-sided and Harvard romped away at the finishes.

The defeats were by no means ignominious.

Fast time was made at the interclass and interfraternity races held at Brown. The Senior relay team beat the Juniors, and the Sophomores beat the Freshmen. The Juniors beat the track record. The fastest time in the fraternity races was made by Delta Tau Delta.

The Course 2 men will have a generous amount of information from people who "speak with authority."

C. E. SOCIETY TO MAKE TRIP TO NEW YORK

Railroads and Tunnels to be Inspected—Sail Up Hudson Planned.

On Wednesday night, April 3rd, the Civil Engineering Society is to make its most important trip of the year, that is, to New York. The society will go by way of the Fall River Line, and three days will be spent in the big city.

In order that the men may thoroughly inspect and familiarize themselves with the railroad system there, two days are to be spent in looking over bridges, railroad stations, tunnels, etc. In addition to the pleasure and value afforded by this opportunity of seeing personally New York's railway system, the society is to make a trip up the Hudson to the big Croton Dam, where an entire day is to be spent. This will be a very interesting side trip, and will give a variety to the occasion. The society is to be congratulated on securing Professor L. E. More to accompany it, and take charge of the party.

The headquarters during the entire stay are to be at the Hotel Cumberland, from which all trips will start. As there are numerous arrangements to be made, it is absolutely essential that all fellows intending to make the trip sign up on the sheets posted in the drawing rooms at once.

Much interest is being manifested in the trip by the Course I. men, and as this diversion from the general run of things is one of the most unique in the history of the society, it is expected that practically all the members will want to share in the good time, and also secure the valuable experience made possible by this trip.

SOPH BASKETBALL.

(Continued from Page 1.)

of a fast man at guard. During the half of the season that Price played he was one of the fastest men on the floor. Henderson, an extra man for center, and Fox, a substitute guard, showed up fairly strong and in another year ought to round into first class shape. Bryant, who played in Price's place for the rest of the year, is a good, hard worker, and in the games he played always had his eye on the ball.

The remarkable success the Sophomore team had is due, no doubt, to their excellent team work. This, coupled with their good passing, was largely responsible for the victories they obtained over some of the strong teams they met. The team opened its schedule with Bridgewater Normal on December 9th, and won by the close score of 22-19. In the first four games they played the total points scored by the Sophomores was 82, and by their opponents 69, showing the closeness of the games. When the five defeated the strong Phillips Andover team, 19 to 16, it was playing in top notch form and showed some "speed." The last four games of the season were walk-overs for the 1914 men. They took the Freshman series by the scores of 29-4 and 26-11, and North Abington Y. M. C. A. met defeat at their hands with 48-15 and 41-29 scores.

If basketball is a recognized major sport next year all the men on this year's Sophomore team will be out for the first team and will, no doubt, show the students some good basketball.

The Yale gym team beat Princeton by one point. E. Ruge of Yale was high score man, winning eight points. Yale won in the last event, Princeton being in the lead up to that time.

The Union Committee has made a decisive step. Coats may now be checked in the dining room.
