FIRST REPORT FROM TEAM IN SOUTH

Weather Proves to Be a Serious Handicap at the New Traing Camp.

(Novel Wire to The TECH.)

Nacoochee, Georgia, March 26—The first report of THE TECH baseball team from its training camp at Nacoochee, Georgia, reached the office this morning. It is rumored that they will challenge Technique tomorrow and that the rains will prove a serious handicap. The Freshman advance agent reported a fine diamond in the town, but the men have not seen it yet as it is five feet under water. It has rained steadily for six days, and if it rains tomorrow the squad will have to move to the church school, in order to keep their feet dry.

The first real practice was held yesterday afternoon at the new Tech grounds. So many windows were broken that the team came out to train there any more. The only other place that can be used for a baseball cage is the gymnasium of the Young Men's Seminary, and if the young ladies can be induced to come to their baseball game, practice will be held there today.

Captain Weight has been putting the men through the most severe course of training. As the ground is worse than Tech course around the pig pens, the captain makes them row a scow for six miles in the flooded streets. They already have the crew beaten by over ten lengths. After this they are made to chop wood for two hours, and then study English. Studying English gives them a mental development, so that they can think quickly in a close play. After practice is dispensed, they are then supposed to spend at least three hours helping Captain Weight in the grounds. Captain Weight and Dary have shown up the best in this part of the training. Captain Weight is a real lefty catcher, and is sure to win his bat.

THE PRIMARY CELL

Professor Goodwin, in his Electro-Mechanical course yesterday afternoon, treated the problem of heat energy as a chemical reaction in electrical terms. By making a few familiar chemical reactions he showed the method of determining the electrical value of each, pointing out the essential condition, that of separating the chemical bonds so that the heat energy may be separated from the electrical energy. He emphasized that this method cannot be used, he said, upon this principle of keeping case component at one electrode and introducing the other component at the opposite electrode. To illustrate this point he briefly explained the Daniell cell, giving the type based on oxidation and reduction. He mentioned several cells as one element of a battery, Professor Goodwin also mentioned the gas cells, in which the phenomenon of diffusion is utilized for the production of an electromotive force.

NOVEL ENTERTAINMENT IN UNION TONIGHT

Countries to Give Representative Exhibitions of Amusements.

At 8 o'clock this evening, the Cosmopolitan Club will give its Joint Night entertainment in the Union. Each national committee will furnish one or two numbers which are characteristic of the countries they represent, and entirely new to most Technology students. The program follows:

1. Shuttle-cock game, by Mr. T. P. Hal.
2. Honolulu Call, by the Turkish students in their native costume.
3. Chinese Flute, by Mr. T. C. Hsi.
4. Lecture on Australia, by Mr. L. M. O'Callen.
6. Mari War Cry, by the students from Australia and New Zealand.
7. Scottish Dance, by the students from Scotland and Ireland.
10. Lecture on the Maori, by one of the members of the Maori club.

The runners will probably find the course very trying; but they will be the first experience in cross-country racing, and it may develop some new material. The race should be especially interesting to the two lower men as they will have by far the best men in the race, and today will show which new material in the Freshmen-Sophomore race will be considered.

The first five men to finish for each team will be scored. The first six men in the Freshman-Sophomore race will probably find the course very trying; but today will show which new material will be considered.

The runners will probably find the course very trying; but today will show which new material will be considered.

JERSEY MEN MEET

Much Interest Shown at Meeting Yesterday Afternoon.

The students from New Jersey who are interested in the formation of a New Jersey State club met yesterday in 14 Pierce. The meeting was called by several Senators who wished to secure the general feeling of the New Jersey men concerning the advisability of forming such a club. Those present were much interested in the proposal and voted to go forward in the organization of the chairman of the various committees that they have been able to present such a novel program.

CIVIL SOCIETY TRIP

Large Number of Members Expect to Make New York Trip.

The Civil Engineers are signing up and making preparations for the New York trip. The men will have next Wednesday, and go to New York Bay station at 2:35. The men will have next Wednesday, and go to New York Bay station at 2:35. The trip will be made up the Hudson River to the new aqueduct and the Croton Dam. The whole day will be spent in inspecting these structures.

The first day will be spent in visiting the Brooklyn Bridge and other bridges along the East River. On Friday a trip will be made up to the Hudson River to the new aqueduct and the Croton Dam. The whole day will be spent in inspecting these structures.

On Saturday the members will have a chance to visit the new Grand Central Station. Other stations and structures will also be examined.

The trip will be under the guidance of Professor Moore of the Civil Engineering Department, who will give a lecture on the various structures in the course of exhaustive professional knowledge.

The trip should be especially interesting to the two lower men as they will have by far the best men in the race, and today will show which new material will be considered.

CREW PRACTICES TODAY

The Crew tried out the new eight- oared shell yesterday afternoon, and the results were quite satisfactory. The candidates have decided to have the following men report today at 3 o'clock sharp: Short, Upham, Howitts, Shurtleff, Perrin, Peria, Swett, Gore. Tvetten will probably act as coxswain on this shell.

Candidates who can turn up this afternoon at the same time will be considered in one of the four-oared shells.

The organization of the Chess Club shows that there is plenty of talent in the Institute.

TEAMS FORMED FOR INTER-COURSE RACE

Courses Are Grouped Into Three Squads For Contest This Afternoon.

The entries for today's Inter-Course race have been made up and the different courses represented arranged in forms of three teams which should prove pretty evenly matched. It was found advisable to join Courses 1 and 10, and place all other courses in a third team. This third team will probably be made up for the most part of runners from Courses 11 and 14. The first team will rely on the work of Lasselle and Lovell. Among the best men in the second course will be Williams, Hill, Heat and Russell. Xeye and Shubert will make an exceptionally strong pair for the third team, and Atwood should also be able to help.

The runners will probably find the course very trying; but today will show which new material will be considered.

LAST DAY FOR TECH SHOW APPLICATIONS

Many Good Seats at the Boston Performances Still Unoccupied.

After 5 o'clock this afternoon no more applications for seats at the Tech Show, 1912, will be honored. Thereafter the show management will have to make it clear to all students that all students would try to make special effort to have these seats. This is positively the last chance to get on the classified list as all seats will be sold at the box office.

The Shubert Theatre is so modeled that all students would try to make special effort to have these seats.
REORGANIZATION OF THE CHESS CLUB

Officers Elected in Yesterday's Meeting—No Outside Games This Year.

The Chess Club held a meeting yesterday afternoon in one of the lecture rooms in Engineering C about a dozen men were present, many of whom had not been in the society this year, and it was finally decided to completely reorganize the club.

The first business before the meeting was the consideration of the resignations of the former president and secretary-treasurer, which were accepted. The following officers were then elected: President, Mr. Baker; Vice-President, Mr. Brown, and Secretary-Treasurer, Mr. Merrill. They immediately assumed their duties, and plans for the future activity of the club were discussed. It was suggested that matches be arranged with clubs of the large colleges in this vicinity, but this was decided to be impractical, as the time before the end of the year is so short and the officers cannot judge at present what our men are able to do. A team from the Institute would be greatly handicapped by the fact that in other schools there were given more promising men interested in the game. The members then voted to have a tournament among themselves in order to give the men both pleasure and experience. The secretary was instructed to procure the tabular views of all the players and arrange the first game between them. The subsequent matches, however, will be arranged by the individual contestants and the results reported to the officers. As many members as possible will meet in the Union at 4 o'clock each Friday, when the games will be played and the previous ones may be discussed. Certificates or memberships which are necessary for obtaining chess men and board at the Cage will be ready to be distributed.

PRINCETON WINS' DEBATE.

Princeton was victorious over Harvard in a debate which was held last night in Sandor's Theatre, Cambridge. The subject in question was: Resolved: That the United States should accept the monopoly plan of the United States of controlling industry and regulate the control of prices in all cases where the Monopoly has been brought about by the operation of economic laws. President Maclaurin was one of the three judges at the Cambridge debate. After twenty minutes' contest the judges reached a decision in favor of Princeton, the voters standing two to one.

BISMUTH PRODUCTION.

The commercial value of bismuth can be better appreciated when one hears that some Colorado mines formerly worked for their gold and silver content, now yield much greater revenue from the extraction of the bismuth itself. It is estimated that the demand in this country far exceeds our own output, and prices are likely to be controlled by a foreign syndicate.

In the electrolytic process of lead, it is possible to refine the bismuth, and the recoveries are said to be of great importance. Prices, however, are still low, and it is not expected that prices will be greatly increased.

THE SMOOTHEST TOBACCO

HIT up the stroke, man! It takes class to show speed! Velvet hits it up right fine in the pipe. Selected middle leaf—the choicest—two years of aging in the warehouse—the nature process of seasoning—mellowing—takes two years to let the bite out, put the flavor right—make the whole smoke smooth. Velvet hits it up in a slow but sure manner and when Velvet hits your pipe—you'll know it. Tables will show you the results that Velvet has brought to many a man. Velvet is age-honed. Velvet is the choicest—two years of aging in the warehouse. SPALDING & MERRICK CHICAGO
