PRICE TWO CENTS

WIRELESS CLUB IN THE UNION THIS AFTERNOON

Big Season With Big Membership Ahead—Club Has New Apparatus.

The first meeting of the Wireless Society will be held this afternoon at 4.15, in the Union. Besides electing four men for the Board of Directors, the meeting will vote on new members. The membership of the society will be greatly increased this year by the return of those members who lost interest last year, as well as by the new enthusiasts to whom the opportunities that the club has to offer appeal. A new antenna, one of the largest in capacity in the city, has been erected on the top of Pierce building. The remodeling of the station is nearly done, and the instruments are now owned by the club, instead of being the property of members.

All members will have keys to the station, which is in the Electrical Laboratory, so that they may use the instruments there at all times. Members having ideas that they wish to work out will have the use of the instruments of the Physics Department, and of the tools of the Mechanical Laboratory. Arrangements have been made to have a table for the society in the Union every Wednesday, beginning today. During the year monthly meetings (usually on the first Wednesday of the month), at which prominent outsiders will speak, will be held. The head of the United Wireless Company for this district has agreed to speak to the club during the year.

CROSS-COUNTRY CAPTAIN.

Earle E. Ferry Elected to Place of Harvey Benson.

Directly after the cross-country race with Harvard last Friday Cross-Country Captain Harvey Benson resigned his captaincy. Earle E. Ferry, 1912, of Pittsfield, who has been acting captain while Benson was out with his injured arch, was elected in his place as leader of the team for the rest of the year.

Ferry has been running long distances ever since he entered the Institute. He was on the his class cross-country teams and also on the Varsity track and cross-country teams. He won the two-mile race with Brown in the last spring meet with Brown. He is a fast, conscientious runner, and should bring out the good that is in the team.

CABLE CONSTRUCTION.

Speed Record Set by Western Electric on Rush Job.

At the time of the recent hurricane which cut off all communication between the outside world and the stricken city of Charleston, S. C., the Western Electric Company turned out 15,000 feet, or almost three miles of 100 pair of lead cable in their shops at Hawthorne in two days, in this way breaking all known records for rush relief work.

Twelve tons of copper wire and more than twenty tons of a lead-copper compound were used in the manufacture of the cable. This gives a little idea of the enormity of the undertaking.

NEXT THURSDAY NIGHT JUNIOR CLASS DINNER

Prof. Dewey and Bursar Rand to Speak—Souvenir Pipes to Be Given Out.

The 1913 class dinner which takes place in the Union the coming Thursday promises to be an unusual success. It is to be a regular 75 cent dinner, and tickets are on sale by the committee and by chosen members of the class.

An evening of real enjoyment is in store for all who will attend. Souvenir pipes are to be given away to all present and the music for the evening is to be supplied by an orchestra. Besides pipes tobacco will be passed, and those who desire to smoke will have that pleasure.

There is to be a quartet composed of members of the class, who will render various selections. There will be plenty of songs and cheers all through the course of the dinner. Three or four speakers are expected to honor the class with their presence. Professor Dewey and Bursar Rand have assured the committee of their presence. The other speakers who are expected will probably attend.

Members of the class will offer topical songs and parodies pertaining to the Institute and to Institute men. A number of tickets have already been sold and the committee expects that it will be the best yet.

HOCKEY TEAM MEETING.

With four of the old men back, the season's prospects for the hockey team are very bright, and there is a good opportunity for new men, especially in the defense. Arrangements have been made with the Boston Arena and this year's team will hold its regular practices there. All home games will be played on that ice, and a schedule containing the leading colleges of the East is in process of formation.

Hockey is fast becoming an important sport in the East, and if its popularity of last year is any criterion it will hold the eye of the athletic world this winter.

An urgent call is sent to all men in the Institute interested in the game. A large delegation is looked for by the management in 27 Rogers, on Wednesday, November 8, 1911.

GOVERNOR OF MASS. STILL IN DOUBT

Boston Turns to Frothingham Contrary to Expectations of Foss.

The result of yesterday's election was still in doubt as THE TECH went to press. Early returns indicated Frothingham's election, but many changes in outlying districts, reported up to midnight, showed that Foss was still in the race.

In Boston proper, supposedly pocketed by the Foss machine, kept reporting larger and larger Republican gains as last evening advanced, a circumstance that worried the Democrats more than the returns from the many outlying districts that reported early, because they did not expect much from the latter anyway. But to lose votes in Boston!

The fine weather was probably of

T. P. A. REPORTS NEWS OF SUMMER RESEARCH

Institute Professors Are Contributing Much to World of Science.

Research work at the Massachusetts Institute of Technology has been the leading feature of the summer months. In the department of Physical Chemistry, headed by Dr. A. A. Noyes, investigations have been in progress for a number of years on the effect of salts on the solubility of other salts. This work was completed this summer by Dr. W. D. Harkins of the Institute at the University of Montana, and Dr. W. C. Bray and Mr. W. Winninghoff, and was brought into shape for publication in the Journal of the American Chemical Society. It is a very important contribution from the Institute's laboratories, and represents progress in a field where little systematic work had been done. This department will continue its work on the properties of aqueous solutions, free energy and electromotive force this fall.

In the Research Laboratory of Applied Chemistry the study of the corrosion of iron with particular regard to the action in water pipes has formed the main theme in summer work. At present the work consists largely of the design of the proper method of heating water in water service systems to drive out all oxygen from the water. This oxygen is the agent without which rusting in the pipes would not take place. Its removal is, therefore, the great secret of success in preventing corrosion.

In the Biological Laboratory the question of the contamination of eggs has been taken up both at the Institute and with the Seymour Packing House in Topeka, Kansas. A model hatchery has been set up in the laboratory for the investigation of the subject from the anatomical side of the question, as well as to get absolutely fresh eggs.

In the physical laboratories, Dr. D. F. Comstock has been doing considerable work with the selenium cell, a light-sensitive, electric control: first, in regard to its use as an indicator for lighthouse work, and secondly, as an instrument for the study of binaries—double stars. This is an adaptation of Professor Pickering of Harvard's use of a bolometer, where heat is the controlling function. The selenium cell is used to obtain the two points of maximum illumination designating the two separate star components received by the telescope and analyzed by a spectroscope. The general statistics in regard to color of stars seems to indicate that most of the far distant ones appear red. This effect would seem to indicate that there is matter in the intervening space which causes absorption of the shorter and more easily lost blue wave lengths of light. Dr. Comstock is investigating this as, if so, diffraction and dispersion should be visible.

Dr. Hollnagel is continuing his work in the Institute on the investigation of extra long wave lengths of light beyond the red end of the spectrum.

The loss of W. T. Gardiner, right tackle on the Harvard eleven, is a big blow to the hopes of the Crimson for victory over Yale. He was in line for an all-American position and is one of the best first-year Varsity tackles ever on a football field.

TECHNIQUE APPEALS FOR GRINDS AND PHOTOS

More Candidates For Assistant Business Board Desired—Open Until Dec. 1.

The class of 1913 has always been one of the liveliest classes in the Institute since its arrival here, and it rarely fails when called upon for support of Institute and class activities. It is for this reason that the Technique Board is depending upon members of the class to come up with the "goods" for the business and grind departments. It is absolutely necessary that the fellows in the class who are not very busy in other Institute activities get into the Technique work and do their part in making their own book a success in every respect.

The idea that Technique is an undertaking dependent only upon the Board is absolutely a false one. To be sure, the Board is responsible for the character and style of the publication, but the material in Technique is representative of the Institute as a whole in all activities and interests, and there rests upon every Tech student a certain amount of responsibility. But the members of the class of 1913 should certainly be deeply interested.

Several weeks ago an article appeared in THE TECH asking for men from the junior class to compete for the two positions of assistant business manager, and only two men responded. Two weeks ago a similar article appeared and two more men came out and entered the competition. But now, where there are only four men out, there should be ten, and the Board is still hoping that the Juniors will come up and respond with vim before the competition closes. It is open till December 1st, and there still remains plenty of time for some good work in the business line.

There is one department, however, in which every student is surely interested. It is the grind department. There are so many little incidents happening daily around the school and in the class rooms and lectures which furnish material for grinds that it seems unnecessary to solicit them, but there have been only a few turned in and something must be said to promote the "good work." The grind boxes in the corridors have been repainted and are readily seen and should serve as constant reminders.

There is also one other department in which a great many Tech men seem to have an interest: Photography, snap-shots of interest to the students can be well used to good advantage by the Board. Any such contributions will be received at the Cage or at the Technique office, and good care will be taken to look them all over, and the best will be chosen to appear in the Technique, either in the athletic or grind departments. If everyone does his share in furnishing material for the book the Board will do the rest.

CALENDAR.

Wednesday, November 8, 1911.
1.00—Hockey Team Meeting—27 Rogers.
1.00—Swimming Team Meeting—Union.
3.58—Cross-Country Men Leave Back Bay Station—Tech Course.
4.15—Orchestra Rehearsal—Union.
4.15—Wireless Club—Union.
4.30—Swimming Practice—Salvation Army Tank.
5.00—Basketball Practice—Gym.

The "Cage" is, as most of us recognize, a mail station and check room for the convenience of the students, and a man is hired to be there from early in the morning until 11 P. M. to fulfill this purpose.

This check room has always been found a great convenience and is probably used to a certain extent by all the undergraduates at more or less frequent intervals. There have been very few occasions when this privilege has been abused, but this year it appears that several misguided members of the student body have misunderstood the purpose of the aforesaid "Cage," and have been for some weeks using it as a store room for portions of their library. If each of the 1500 odd students should leave four books at the Cage all the time and take them out as they were needed for their various classes and return them at the end of the hour, Mr. Roberts would be obliged to handle in the vicinity of 6000 books daily, which, as is evident, would be quite a tax on the pleasantness of his disposition. At present the number of men who are abusing the privilege is small, but unless the practice is stopped at once, no one can imagine the limit that it might reach. We hope that the old adage, "A word to the wise is sufficient," will hold true in this case as well as it has in the past.

There is an unwritten rule here at the Institute that hats are to be removed in the rooms of the Union at all times. This is no more than common politeness, and all men in the Institute are supposed to have been brought up in a manner which taught them politeness as one of their first lessons. Several men have been lax in this manner, probably through forgetfulness. Last year the House Committee was obliged to make a rule that all who were warned and then failed to comply with the ruling would have their names published. It seems, however, that each man will take this in the proper spirit and govern himself in accordance with the rule, so that no future remarks need be made on the subject.

COMMUNICATION.

To the Editor of THE TECH:

Your attacks in the editorial column of two recent issues of THE TECH on the House Committee seem wholly unwarranted. That in today's issue is a wilful misrepresentation of facts and should be contrary to Tech standards.

The Techniques should be placed in their proper case, but it is too small, and rather than put only a part out, none were put in the case. The key has been lost through no fault of the House Committee, and pending the appointment of the new committee no action was taken in securing a new key. To quote THE TECH: "The Techniques were resting peacefully in the Cage." It was considered all right to leave them there until the committee could be formed. In Tuesday's issue THE TECH editorially criticized the committee for failing to get a key and then, without allowing time to obtain it, another attack was made, more bitter and unfair than before, in Thursday's issue. Perhaps if the House Committee had taken the cover off the case, put in the Techniques and then screwed the top on again THE TECH would have been satisfied, although the books would then have been inaccessible to every one.

If THE TECH wished to call the attention of the committee to an apparent neglect of duty why did it not do so in the proper way instead of by an unjust editorial, followed by a rabid attack on the work of the committee. What do you suppose we have a suggestion box in the living room for?

Complaints have recently been made because the clock in the Union was not keeping good time. The first that the House Committee knew of these was when the matter was brought up in the last Institute Committee meeting. That body very properly referred the matter to the House Committee, to which the complaints should have gone in the first place.

THE TECH stated that "the Technique file is still being thrown about in the Cage, as occasion demands, and as its room is needed."

This was an exceedingly rash statement because the books have not been thrown about, nor has their room yet been needed for storage purposes.

The House Committee has now been organized and a key to the Technique case is to be secured as soon as possible. This key may not be secured before Wednesday, and it is hoped that THE TECH will be able to refrain from further comment on the matter until after that time. The offer of THE TECH to supply funds for the purchase of the key is much appreciated and may be accepted.

If the purpose of this discussion by THE TECH has been to promote sales we hope it has utterly failed. If it was to correct an evil we believe that the method of approach and attack was entirely wrong, and that in the future THE TECH will be as clean and fair in its methods as it generally has been in the past.

OLIVER D. POWELL.

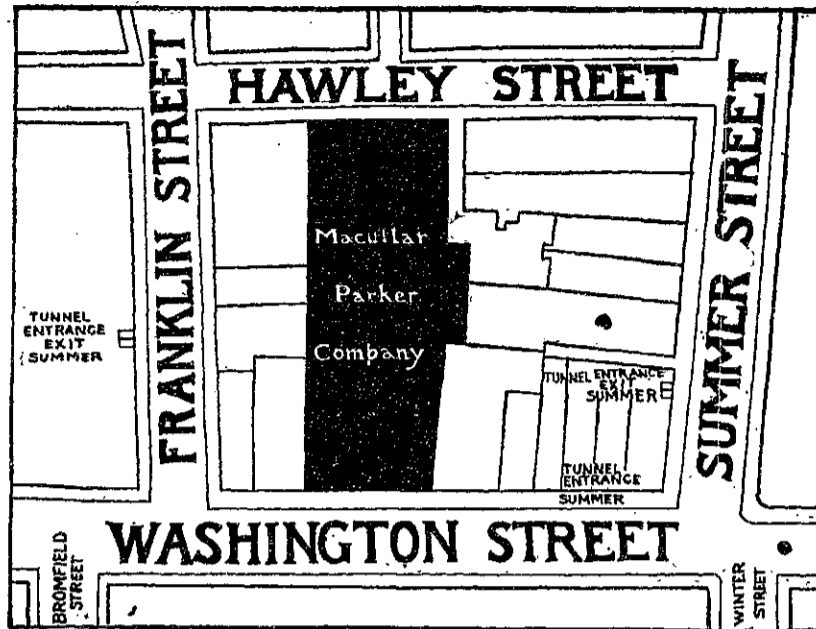

M. A. H. S. MEETING.

Friday evening the Mechanic Arts Club will hold a meeting in the Union. The meeting will be purely an informal one, as there will be no speakers. Entertainment will, however, be provided for the members attending, and refreshments will be served. Men desiring to go must notify the secretary before Wednesday noon in order that proper arrangements may be made with Mr. Colton.

Princeton now has but two games to play, Dartmouth Saturday, and Yale on the following week. With the experience gained in the Harvard game, the Tiger has a fine chance to take the eastern championship.

HARE AND HOUNDS TO BE RUN ON NEW PLAN

Shorter and Slower Races to Be Held—First Run Next Saturday.

Next Saturday afternoon an entirely new series of Hare and Hounds' runs will be started by Coach Kanaly. The course each week will average about three miles in length, so that everybody that is out for any of the events from the relay to the cross-country team can take part in these runs, and Frank wants all candidates out.

The slow men need not fear to come out for the runs as an easy clip will be maintained at all times. Also the sport which used to characterize the finish of the previous runs will be done away with. The object of these runs is purely one of exercise and training, and those who are not out for the team, but just want the exercise are especially welcome. It is hoped by the track management that everyone that is out for the track team will run Saturday to get in the first run of his new scheme.

Coach Kanaly will take charge of these runs personally and will be glad to help the fellows in any way that he can. The Hare and Hounds chase scheme was started several years ago to give the men a chance to train for the cross-country team and also to furnish an amusing way to accomplish this object. Lately these runs have become so fact that only the regular team men could keep up and show any class at the finish. As a result Coach Kanaly has devised this new plan.

The course for the new run has not yet been announced, but it will be announced on the bulletins in time so that the men can arrange to be on hand. It is also announced that the price will be in range of every one—not more than twenty-five cents. This charge covers all expenses to and fro, and also a swimming pool is promised at the end of the run wherever possible to arrange.

MILITARY SCIENCE NOTES

Major Cole Intends to Form Drum Corps This Year.

The recent inauguration by Major Cole of his knot-tying classes has attracted much attention, and a large enrollment has already been made, as stated in THE TECH. His success in the military science course incited THE TECH to make some inquiries about his previous military experience.

He came from West Point in 1889, and since that time has been engaged partially in active field work, and partially in teaching military civil engineering to army recruits. He was in the famous battle of Santiago, and after the Cuban campaign was over he was sent to the Philippines. For some years he has been engaged in teaching field engineering at Fort Leavenworth and other points, especially topographical drawing and construction of pontoons, etc. He originated some simplification of topographical drawing which he put into use there. The new course at the Institute was undertaken at the request of the Dean.

In regard to plans for the battalion for the year, he says that he intends to form a drum corps, but that there will probably be no regular band. During the second term he hopes to try some real field work if an open space can be procured. To date the course has been quite interesting, and with these innovations should be a success.

In Captain Brickley, Harvard has one of the best Freshman players in years. His four goals from the field against the Princeton Freshmen at difficult angles stamps him as a great drop-kicker and promising material for the varsity next fall.

GOVERNORS ELECTION
(Continued from page 1)
The advantage to Frothingham, as his managers had anticipated trouble in getting Republicans to the polls in case the promised rain should fall. The voters in all parts of the State reported at the polls early and in large numbers—sixty percent of those registered having voted in some districts during the first two hours of the day, and a larger vote than has ever been cast before in a state election was polled in the city yesterday. Governor Foss was among the very early voters, as he marked his ballot at 10 minutes after 7 yesterday morning. Mr. Frothingham voted at 9:20. Great excitement reigned at the various bulletins in the city while the returns were pouring in from all over the State. Though the first reports that were received gave Frothingham the preference the result remained in doubt until very nearly all the votes had been counted.

Are worth an acquaintance. They possess all the good points. Hygienic methods, skilled workmen, and the choicest material—briefly tell the story of their manufacture. Give them a trial and you will surely make a friend.
