CO-OPERATION DINNER OF THE TECH STAFF

Meeting Takes Place Tomorrow
All Men Out for the Paper
Are Guests.

At promptly 6 o'clock tomorrow evening the Managering Board of THE Tech will meet as hosts at a dinner, given for the news and business departments of the paper. The affair will take place in the smaller dining room of the Union, with Mr. Colton as usher.

A feature of this meeting will be the presenting of the Annual Record of THE TECH. This body of three men, which is closely connected with the duties of the business and financial departments of the various departments. The members of the council are expected to have many valuable interesting comments and suggestions to make.

This dinner will be an informal meeting of men connected with THE TECH. The prevailing spirit will be of the get-together kind, where the friendly and social sides of the activity, said to be the most important of all, will be given a prominent place. The qualities and perspective of the doings of the various branches of the machinery of THE TECH is a distinct help to the individual, and for that reason, in addition to the men who have already won positions on the staff, every promising candidate has been invited and is expected to present.

Some novel features will be introduced at this meeting.

ENGINEERING LECTURE.

M. E. Society Invited to Lecture by Prof. H. W. Harvard.

There will be a meeting of the American Association of Mechanical Engineers on Friday evening, December 18. Prof. H. W. Harvard, associate professor of Mechanical Engineering at the Institute, will speak on "Problems of Mechanical Engineering," and is expected to be present.

The lecture will be held in Room 22, every man to whom anything of this kind has been assigned, will be present.

The lecture will conclude with a social gathering, at which there will be a refreshment served.

ENGINEERING SOCIETY DINNER TONIGHT—6.30 IN UNION.

This evening, at 6.30, the members of the Electrical Engineering Society will have a dinner in the Union. It is expected that a large number of men will turn out, and there is no reason why they should not, for the society has secured an excellent attraction in Mr. Valentine. Mr. Valentine is an experienced telephone engineer, and he will speak on the subject of "Telephony." His promises to be very interesting ones.

E. E. SOCIETY TRIP COMES MID-YEAR'S WEEK.

Itinerary is arranged to include principal Electric Plants of New York.

Tonight the completed plans and expenses of the proposed E. E. Society trip will be submitted before the meeting for adoption. The trip is to include a two days' stay at Niagara Falls, an excursion to the Great Schenectady and two more days in New York City.

Several complete itineraries covering in detail the six days' trip have been arranged, and all accommodations will be provided for in advance. This feature will probably be secured through one of the tour agencies.

The trip will not be made unless ten or more agree to go, although the present outlook is that there will be no trouble in securing this number. Special sleepers for the night runs and special coaches for the day runs have been arranged. The trip will stop at the Hotel Imperial at Niagara, and at the Hotel St. George or the Imperial at New York.

The trip is to start Sunday, February 2nd, and will officially end in New York City on Friday night, February 8th, although the men may take the 5 o'clock boat for Boston or remain as long as their cash holdings allow. One member of the Faculty has already signified his intention of going.

On account of the number making the trip and the time it is expected to be obtained, the total cost will be low enough to tempt many to spend mid-year's week's pocket money.

The trip will be open to all students of the Institute. Complete details will be given tonight by Mr. J. J. Tremain, chairman of the Excursion Committee, at the society's dinner in the Union at 6.30.

The program consists of an adherence to the following plan: At Niagara Falls, Ahlborn Electric Co., makers of graphite electric furnace equipment; Wedel Wheat Co., electric equipment; Thursday, Alkali Chemical Engineers Development Co. of Ontario; Ontario Power Co. and its Transformers Substation, No. 1, 110,000 volts. At Utica, Sackwicz Steel Co., large blast furnace; at Schenectady, General Electric Co., in New York City, Waterside Station, No. 1 and No. 2, New York Edison Co., which has the largest furnace in the world, with a capacity of 20,000 I.C.W., and the 19th street station, which has the largest combined reheating engine and exhaust steam turbine unit in the world.

AIRWAYS.

Forecast for Boston and vicinity: This Tuesday; moderate westerly winds.

CALENDAR.

Tuesday, December 17, 1912.

6.30—E. E. Society Dinner—Union.
7.15—E. E. Society Basketball Practice—Gym.
The Tech, Boston, Mass., December 17, 1912

As an example of gross misrepresenta-
tion of facts and disregard for the
truth, the following article which
appeared in an exceedingly well
known college publication recently
cannot be surpassed. The last
statement is the only one which even
approaches the real facts of the case.
The entire article as it appeared
is as follows:
"THE TECH, the daily paper at the Massa-
chusett Institute of Tech-
nology, has temporarily suspended
publication. The two editors who
were in charge of Monday's issue left
for the winter in different parts of
Massachusetts on Saturday night
without making arrangements for the
publication of the paper on Monday.
A meeting of the editorial board was
hurriedly called on Monday and the
resignations of the managing and ath-
letic editors were received. The bust.
ful of subscriptions, $5.00 and $4.00 A. M. Daily.
Office Hours of Business Manager: 9.00 to 12.00 A. M. Daily. Send subscriptions to
Office Hours of Manager: 9.00 to 12.00 A. M. Daily. Send subscriptions to
The meeting of the editorial board was
hurriedly called on Monday and the
resignations of the managing and ath-
letic editors were received. The busi-
ness manager has assured the stu-
dents that the paper will soon resume
publication. Those who are well in-
formed are certain that the paper is
to be continued, but not necessarily
at present, since much of the work
incident to the planning of the New
Technology will fall on them. Hence
the T. C. A. is especially for-
tunate to secure him for its noon-
meeting.
All the men who have heard the
President know that whatever he says
will be of great interest. Every Tech-
man will look upon it as a duty to
attend this meeting, even at a sac-
ifice.
Dr. Maclaurin finds it possible to
speak only once a very few times in the
course of a year at student gatherings,
and the fact that he has arrange-
d to speak for the T. C. A. shows
that he recognizes the important
place held by the Association in Tech-
ology life. The President is extreme-
ly busy at all times, and more so than
usual just at present, since much of
his time is occupied with the planning
of the New Technology, which he says
will probably speak on some phase of
the Association's work, and its rela-
tion to Institute life. However, the
Association feels that the mere
announcement that Dr. Mac-
claurin is to speak ought to assure a
crowd that will tax the Union to its
annual capacity. Last year four hun-
dred men turned out to hear Dr. Mur-
fin, the new president of Boston Uni-
versity. Many more than that num-
ber are expected this week to hear
our own President.
The meeting is at 1:00 o'clock in the
Union. It begins according to Boston
time, not necessarily by United States
time, which is apt not to be the same.

BIOLOGICAL SOCIETY

Have been Invited to Lecture at
Harvard Medical School.

Dr. Cleveland Floyd extends to the
members of the Biological Society
through E. M. Tolman, its presi-
dent, an invitation to attend the meeting of
the Boston Society of Medical
Science, this evening, at S. P. M.
The lecture will be held in Building
D of the Harvard Medical School.
Three papers, including one on pa-
thyology, will be read. There will
also be moving pictures of typhoid bacilli
in motion, besides showing many
protozoa. The films are among the
finest and yet the most difficult that
have ever been made.

The Biological Society urges all its
members to be present, as it is sol-
dom that they have such a splendid
opportunity to hear a lecture on this
important subject.

Last of the Holidays

Some of your vacation joys must be left behind—but not
Fatima.

60 Fatima coupons will receive a white satin
pillow in, 14 x 14, square, decorated with hand-
omey painted flowers—12 designs to select from.

"Distinctively Individual"
MECHANICAL ENG. SOCIETY

The members were taken through the Watertown Arsenal at Watertown, where many of the large guns and projectiles for the navy are made. The making of the exceedingly accurate fine sight adjustments. The method of procedure in the making of the projectiles was also explained.

Lastly, the students felt that they were able to secure the attendance of their predecessors. This year he is a member of the Institute Committee. Two years ago Prof. E. P. Miller, head of the Mechanical Engineering Department, after unceasing efforts, was able to secure the attendance of Prof. I. N. Hollis of Harvard, the Student Branch Pin. Up to this time the students felt that they were attending the meetings of the society without having an actual connection with it, and were in a way outsiders, and so desired the means of recognition relative to the society afforded by this pin. The society permitted the use of the four leaf clover with the four letters A. S. M. E. on some background to show it to be the Tech branch with the letters M. I. T. on it.

Recently the society enjoyed a trip to the Watertown Arsenal at Watertown, where many of the large guns and projectiles for the navy are made. The members were taken through the entire establishment and shown the methods employed in all the different processes of manufacture. The making of the guns was followed from the point for the stock to the making of the exceedingly accurate parts to be used in connection with the fine sight adjustments. The method of procedure in the making of the projectiles was also explained.

Lastly, the students showed the complete details of the two machines for testing materials in tension and compression, one of which is the largest in the world. It is here that so many tests have been conducted, and the results of the tests have been used in the making of the materials which have been of much benefit to the scientific world.

After the Christmas vacation the Mechanical Engineering Society expects to be able to get a representative of the Lewis Pipe Company to give an interesting and instructive lecture with lantern slides.

The Journal, issued monthly by the American Society of Mechanical Engineers, is of great value to the engineer. Being a member of the A. S. M. E. is of great value to the engineer and you will endorse the dictum of your predecessors. Velvet the choicest growths of Burley leaf is mild, rich and satisfying—yet without expense.

CHESS TOURNAMENT

CHESS TOURNEY.

Tuesday evening, Tech's rejuvenated chess team visited the rooms of their Harvard rivals and took the Harvard second team to the tune of four and one-half to one and one-half. Tech did remarkably well, considering what little chance they had to practice, by winning three games, tying three, and not losing any. Norwood, Baker and Merrill beat Lange, Tabens and Coggeshall respectively; Chandler, Hoyt and Brown tied Hurley, Beers and Levy.

Tech is planning a return match with Harvard to take place in the new year, as well as matches with some of the other colleges in this vicinity.
BOSTON OPERA HOUSE

MOR., 8 to 11. Last appearance of Mary Garden. "TELEGRAPH." Garden, Fish, Swarts, Scott, Wilson, Marcoux, De Potter. Cond. Andrade-Caplet.

WED., 7:45 to 10:15. First Presentation of LOUISA. Edvina, Gay, Barnes, Clement, Marcoux, Cond. Andrade-Caplet.
