Art Department Will Cost Twice As Much As Last Year—Six Color Plates.

The art department of Technique 1914, which cost a little over four hundred dollars, elicited a great deal of favorable comment, but the 1915 Board, having doubled this expense, expects to have done all previous efforts. The book contains six full-color pages, against one single one last year, and other factors have been improved in similar proportion.

The cost of these color drawings, which are an asset to this degree, is high. Every color plate that goes into the book requires four separate engraver's plates and four separate printing plates. Four re-drawings of one color drawing the engraver charges fifty dollars and the printer's charge for doing the extra printing in anywhere from fifteen to twenty-five dollars. A full page black and white drawing costs five dollars at the engraver's, and every small heading adds one dollar to the engraver's bill.

A little mental arithmetic will soon convince one that to scatter pictures through a book may bring great pleasure both to him who places them there and to him who looks at them, but realize the amount necessary to insure the success of the book financially.

This year's book has insisted that all hackneyed ideas be eliminated and that only drawings expressing a new and original idea be considered. This has resulted in a work that is full of interest and life. Those few who have seen any of the work have declared that no Technique before has ever equalled it. In fact many expect it to bring the greatest success of any Tech ever.

Performance Well Attended—Quartet Singing a Feature.

The concert of the combined Musical Clubs, given at Natick last night, was an immense success. The performance was given in the First Congregational Church before a large audience, who thoroughly enjoyed the clever work of the Tech men. The snappy songs and pleasing musical selections held the attention of everyone from the start.

The Glee Club quartet, comprising Tallman, Parkins, Blakely, and Tubbs, rendered several selections and were encored again and again. Tallman's song, "The Little Irish Girl," was well received and he was encored to sing "In Spains" before the audience.

The Banjo Club trio, consisting of Rankin, Brown, and Sherman, played Bacon's "Troopers," and for the encore, Rankin and Sherman played a gnostic duet, tossing their banjos into the air while they played.

The Glee Club then rendered several selections and the Banjo Club its final appearance, playing Lewis's "Darkie's Dream." As an encore they played a lively onestop, "Bean Club Mocassins." The harmonious artists had everybody marking time with their lively tunes, and they were obliged to repeat them several times.

The concert was a great success and it will probably be repeated in the near future.

 TECHNIQUE PICTURES BETTER THAN EVER.

SOUTHERN CLUB DANCE TONIGHT

Everything in Readiness for Event in Copley-Plaza at 8 O’clock.

This evening at the Copley Plaza the Southern Club will give its second dance of the year. An attractive program of eighteen numbers has been prepared, and from all indications the affair will be even a greater success than the preceding one. Dancing will begin at eight o’clock and the floor will be open to everyone present at 7:45, so that the dancers may be introduced in the opening of the evening to be followed by refreshments.

The patrons and patronsesses are Dean and Mrs. Alfred E. Burton, Professor and Mrs. Frank Vogel, Dr. and Mrs. Harvey B. Phillips, Professor and Mrs. W. H. Wickenden, Major and Mrs. Edwin T. Cole, and Dr. Joseph Blackstein.

A. B. Williams, President of the Club, in Chairman of the Dance Committee.

MUSICAL CLUB CONCERT

(Continued on Page 4.)

HARE AND HOUNDS

Leave Trinity Place Station at 2:05 for Newton.

The runners in the Hare and Hounds Club chase will leave Trinity Place Station this afternoon at 2:05 train for Newton, where the chase will be held.

The course at Newton is one of the most popular among those visited by the club. It consists of a good deal of road work and easy field running with a few rolling hills. There will be two squads, one starting several minutes before the other, so that they will finish at about the same time. The slow squad will set a slow enough pace so that everybody will be able to keep up and nobody should hesitate in coming out. Captain Kelly has done no running this year, and the slow squad will set a slow enough pace so that everybody will be able to keep up and nobody should hesitate in coming out. Captain Kelly has done no running this year.

The men will take the 5:30 train back to Boston. Chase Captain Best will have tickets on sale for the round trip for 25 cents at the station before the train leaves.

This will enable you to receive a good suit at a very low
price. Every Tech man should take advantage of the above.

PRICES $55.00 up.

L. PINKOS, Tailor
Large Force of Men Start Work with Advent of Good Weather.

During the month of February the weather permitted much progress at the buildings of the Massachusetts Institute of Technology on the Esplanade, Cambridge. Since the melting of the snow, however, activities have been resumed and today there are three hundred men employed. The principal activity at the moment is in the group of buildings forming the three sides of the central, minor court. These are the structures that are to be devoted to general studies and Biology and Public Health. There has been some delay in the planning, well established as they were a while ago, for the cooperation with Harvard University, whereby the numbers at Technology will be increased by some Harvard men, both students and professors, has made some rearrangement necessary.

Within the east court, which is in its foundations about three hundred feet square, there are now five pile-drivers at work, and this portion of the piling is likely to be completed first. As you all know, the buildings there have been driven about five thousand piles, about one-quarter of the whole number required. It is important here to note that the demand for piles has been quite important as such demands go, and instead of buying from a single dealer no less than fifteen different sources of supply have been sought.

The little Venice that is to be a part of the hydraulic laboratory is now one of the important features that is being considered. There is to be a great portion well which will have a capacity of twenty or thirty thousand gallons, for the testing of pumps, while a number of canals of different sorts for testing different kinds of water flows will run beneath the basement of the building. It is important to determine on whose the piling for the foundations can be driven.

The wall itself is surrounded by 2000 square feet of steel street piling within which the concrete walls of the well will be set. The excavation is now completed and the concrete mat for the bottom will be placed early next week.

Stone & Webster have their own locomotive on the grounds and the tracks in place which give access to every portion of the grounds. The system is connected with the Boston & Albany R. R. and already 750 car-loads of material—the piles not included—have been received and distributed to the different sections. The locomotive is the forty-ton one that was very busy building the Kentucky dams. It will be working 60 to 80 miles a day backwards and forwards over the mile of track in the grounds.

The number of men at present in the vicinity of the constructions and here there has been unloaded more than a million feet of lumber. This is for concrete forms and is to be handled in a shop that

COMMUNICATION

The Editor of this TECH,

Dear Sir:

I see by the paper that Miss Pendleton, President of Wellesley College, says that owing to the fact that all laboratory facilities were destroyed at the recent fire work cannot be resumed for some time. This means that the number of students will be enormously reduced. As engineers we should consider what effect this will have on the H. A. E. R. Its Saturday and Sunday evening earnings will fade away to the vanishing point causing depreciation of the stock and tremendously reducing the dividend. This will bring starvation to thousands of widows and orphans; the giant wolf will grow fat.

This calamity is avoidable. After much thought I have evolved a plan, which I offer through you, to prevent this great catastrophe. This plan will be adopted, no student will be forced to cut lab for money, and even though it were crowded what true Tech man would be so discourteous as to refuse the half of his desk right next to mine; and instead of throwing the profits of the supply room could be enormously inflated by adding candy and hairpins to the stock in trade. The adoption of this plan would increase the interest of the students in their work. I will wager everything I have saved for Junior Year that, if it be adopted, no student will cut lab for the next eight weeks. Since of late we have been prone to co-operate with everything at the slightest provocation, I see no reason why, when the benefit to be derived are so general, that we can not embrace this particular opportunity.

It behooves us to act quickly in this matter lest another institution, recently absorbed by us, whose students have been our rivals in this field before, should beat our time. I am, sir,

Respectfully yours,

GALBEE SHIND, Jr., '14.

THE SMOOTHER TOBACCO

SEE the singer full of sleep piping up? See the pipe full of Velvet helping out! Velvet, the finest of leaf—aged over two years—down—mellowed—fit for "Fizzy" himself. Time alone can eliminate all harshness—bring about real smoothness and develop the taste that's good. When exams, boom up and uncertainty is rife—a box of Velvet will help concentration and study—it's smooth! At all dealers.
