BOSTON, MASS., FRIDAY, MARCH 27, 1914.

PRICE TWO CENTS

MOVING PICTURES FOR LADIES' NIGHT

Civil Engineers' Extend General Invitation To Attend The Talk.

The feature meeting of the year of the Civil Engineering society occurs tonight at eight when Mr. G. H. Perkins gives his illustrated talk on "Road Building".

Mr. Perkins is the superintendent of Refineries of the Warren Bros. Co., who are well known road builders. The talk will be fully illustrated by lantern slides and moving pictures that the speaker brings with him. A general invitation has been issued by the society to all members of the student body to attend. In addition to this the committee in charge has decided that the affair shall be a ladies' night.

Mr. Perkins will deal largely with the construction of modern country roads and will lay especial emphasis on bituminous concrete mixtures for these roads. He will illustrate his points by lantern slides showing the difference in grades of the mixtures and the different makes of various contractors.

The actual process of paving will be shown by the moving pictures. These were taken while certain roads were being constructed and illustrate the method clearly. Pictures will also be shown of some of these

(Continued on Page 4.)

TECHNIQUE BAND MEET

All Popular Tunes Are Being Well Rehearsed.

The Technique Band met yesterday in the Union and diligently rehearsed all the latest popular music. A large number were out for the band and at the present rate of interest, the band will be a great factor in making the parade to be held on the day of the Technique rush a success. Under the leadership of Sousa Brooks and with Anderson at the base drum, the band will surely make an impression on Boston people when they hear the music.

The course of the parade this year will be the same as that of last year, starting from Rogers' steps, down Newbury Street to Dartmouth, along Dartmouth Street to the Copley Plaza. The parade headed by the band will then proceed around the Copley Plaza and will finish its course at the empty lot in the rear of the hotel. It is the plan of the Technique Rush Committee that every student shall meet on Rogers' steps at noon on the day of the rush and take part in making the parade a success.

IMPRESSIVE TALK ON "TRUE MANHOOD."

The Four Cornerstones Outlined By Rev. A. T. Kempton At T. C. A. Meeting.

Yesterday at 1.30 in the Union, the Rev. Austin T. Kempton gave a very straightforward talk on "True Manhood." Mr. Kempton is the pastor of the Northampton Baptist Church of Cambridge, and this was his first appearance here.

In introducing his subject, he compared manhood to coins, saying that some men were like counterfeits,—very fine to look at from a distance, but found to be absolutely worthless on closer inspection. True manhood, on the other hand, is genuine and pure through and through, to the last analysis.

There are four cornerstones, Rev. Mr. Kempton said, on which the whole structure of true manhood may be said to depend. The first of these is health. Young men who are in good health never seem to realize what a valuable asset it is, and neglect it until they have to suffer the consequences. While not a faddist, the pastor believes in resorting to all possible means to keep in "the best fighting trim", so that one may successfully cope with nerve-racking problems which are constantly confronting him.

The second cornerstone is governed largely by the first, and may be stated briefly in one word Personality. A man should make himself "delightful, winsome, and strong, a leader among men." One great factor in accomplishing this is in presenting a uniform good appearance. Slovenly men, even if they are brilliant, often impress prospective em-

(Continued on Page 4.)

OUTDOOR TRACK

Field Will Be Opened Saturday Afternoon.

The spring outdoor season commences Saturday afternoon when practice will start at the Field. All Freshmen who are substituting track work for gym are required to report and all varsity men are expected to show up. With the opening of the Field held over for a week, track work was set back that far, and in order to overcome this handicap it is expected that a large majority of the men will report. It is necessary that they do this as the interclass meet and the Bowdoin meet are only a short way off.

The ground keepers have been busy the last few days getting things in readiness for the season, and the track from all indications will be in very good condition.

SHOW APPLICATIONS DUE TOMORROW

Large Number Already Received —Distribution To Be By Lot.

Applications for seats at "A Royal Johnnie" should be sent in by five o'clock tomorrow afternoon. All applications that are received up to this time will be divided into the classes A, B, C, D, and E, and then seats for each class in turn will be distributed by lot. Any seats that are left after this allotment may be obtained at the Show office next week. All men who have ordered seats for the evening performance in Boston are reminded that they can get better seats by changing to the afternoon.

Up to the present time a large number of applications have been received, but these will be shown no preference over those that come in between now and tomorrow afternoon. Care should be taken in filling these out, as any that are not properly made out will either be discarded or filled arbitrarily by the management. Particular attention is called to the fact that only members of the faculty, patrons and patronesses are allowed to apply for more than four two dollar seats. If more are applied for the application will be placed under class E.

Those who pay for their tickets before tomorrow night will receive them by mail. All other tickets will be reserved until five o'clock, April 4th. If the payment is made by check, this should be made payable to Tech Show, and not to any individual.

Applications sent by mail should be addressed to Arthur T. Munyan, who is treasurer of the Show this year. They may also be left at the Tech Show office in the Union.

FRESHMAN WRESTLING

At 1.15 on Saturday in the Union there will be a meeting of the Freshmen interested in wrestling, to elect a captain. More Freshmen are needed for the team which is to meet the Sophomores a week from this Saturday, in order to make a successful exhibition against the second year men.

PROM COMMITTEE

There will be a meeting of the Junior Prom Committee at 5 P. M. today in the Union.

GLEE CLUB REHEARSAL

There will be a Glee Club rehearsal today at five o'clock in the Union. The coach will be in charge and it is absolutely imperative that every man be present. There will be a double fine for absentees.

INSTITUTE COMMITTEE HOLDS MEETING

Committee Appointed To Arrange A General Convocation Or Smoker.

The report of the Union Committee to the Institute Committee stated that a picture had recently been given to the Union by H. D. Kemp '12, who talked before the Mechanical Engineering Society a short time ago. The Committee also reported that Major Briggs has purchased a glass case for displaying the trophies. The Major felt that many of the valuable cups that are now above the fireplace and in other parts of the Union could be shown to much better advantage if they were collected in a suitable place and kept in better condition.

The petition of Technique to be reinstated to membership on the committee which they had lost by absence brought forth some comment. It was felt that attendance at the committee meetings must be emphasized strongly, and that in order to get the attendance lax methods must not be used. After a little discussion the petition was granted.

Among the new business to come before the meeting was the matter of a general convocation, or smoker, for all the classes. It was proposed to make the program consist of a little entertainment, the singing of Tech songs, talks by members of the Institute activities, and a report to the undergraduate body by the Institute Committee. Considerable discussion took place as to whether the affair should be a convocation or a smoker. Much was said favorably on both sides but no definite action was taken. The matter was left to a com-

FRIDAY, MARCH 27, 1914.

IN CHARGE OF THIS ISSUE.

Editors: H. P. Gray, '16; E. F. Hewins, '16.

Assistants: J. G. Fairfield, '16; A. D. Nute, '17.

The late disregard of the tradition which forbids the wearing of hats in Huntington Hall would seem to indicate ignorance on the part of new men rather than lack of respect for the hall which, by virtue of its long connection with Technology's history and its intimate association with the life of every student, should be held particularly sacred.

The reinstatement of Technique 1915 to representation on the Institute Committee seems entirely justified under the circumstances, yet this policy should certainly not set a precedent. Absence from meetings, without a reason of the first magnitude, indicates lack of proper interest in the Institute's affairs, and should be summarily dealt with, a considerable term of exclusion being none too heavy a punishment.

Our new relations with the Harvard Engineering school should open our eyes to some of the educational advantages that are free to all within reach of the University. The library, fourth largest in the country, is perhaps the least interesting to Tech men, due to our proximity to the even larger one on Copley Square. The Fogg Art Museum contains some treasures well worth familiarizing, and the other museums are equally interesting. The Ware-Blashka collection of glass models of flowers, perfect even under the microscope, is absolutely unique. In addition to all

ENGINEERING AND SCIENTIFIC NOTES

Power From Compressed Air.

A novel and what is claimed to be also an economical method of transmitting power in mining districts is to be carried out on an enormous scale in South Africa. A German factory has recently completed the first of three huge turbo-compressors which are being built for the Victoria Falls and Transvaal Power Company. It is capable of delivering over three and one half million cubic feet of free air per hour at a pressure of 140-170 pounds per square inch. The 12,000 horsepower input is supplied by a high pressure turbine driven by superheated steam, fitted with automatic nozzle regulation and built for a speed of 3000. The air is compressed progressively in three separate cylinders, each of which is water-cooled. It is the intention of the company to transmit this large amount of power by pipe lines over a radius of at least twenty miles to supply power for drills and other apparatus in a large number of mine shafts.

Transatlantic Telephony Coming

William Marconi did not receive radio-telephonic signals from Canada in the course of experiments on board an Italian warship, but that conversation across the Atlantic will soon be within the range of possibility is indicated by an interview with the inventor: "The problem of the wireless telephone or radio-telephony," he said, "has been practically solved. This has been proved by successful experiments on board the Duke of Abruzzi's flagship, the Regina Elena, off Agosta, Sicily. With ordinary apparatus radio-telephonic communication was kept up between several warships, including torpedo boats three-fifths of a mile apart. When new apparatus of my invention was used communication was possible between ships eighteen to forty-three miles out at sea. We also succeeded in communicating with a ship twelve miles distant, despite intervening land. Unlike radiotelegraphic, wireless telephonic communication, instead of diminishing in effect, becomes clearer with increased distance. Hence, if sufficient energy is used, radio-telephonic communication will be quite possible at the longest distances. My conviction is that the day is not far off when the human voice will cross the Atlantic. In the meantime my new radio-telephonic apparatus has already been adopted by the Italian Navy, and will shortly replace entirely all other kinds of signalling."

these are the public lectures frequently given in connection with the University.

given, so as to give the underclassmen a chance to learn the Tech songs by the time of the performance the sixteenth.

Representatives of the Technology Monthly were present and read a proposed constitution for the publication. The matter of the acceptance of the constitution and the recognition of the paper was referred to a committee which is to report to the Institute Committee in the next few days. The representatives of the Monthly were anxious that action be taken as soon as possible in order that they might go ahead and complete their arrangements with the Harvard Engineering Journal.

A motion was passed that the executive committee of the classes elect men to fill the vacancies now existing in the M. I. T. Co-operative Society. The elections will hold until the end of the term. Next year the members of the society will be elected in all probability on the regular ballots of the classes.

Just before adjournment a letter from Major Briggs was read acknowledging the receipt of five hundred dollars from the committee which was given by them for the support of athletics.

The following men were absent: P. H. Duff, H. B. Redmond and R. E. Wells.

**ANNUAL SPRING RUN
AROUSING INTEREST**

Train Leaves Back Bay At Two-Forty—Large Number Expected.

The spring run of the Hare and Hounds Club that comes off on Saturday is expected to turn out a larger number of men than usual. Already many that have not been doing any running have signified their intention of coming out and getting in the game. The close proximity of the Freshman-Sophomore race that comes the Saturday following has induced many to consider taking the run as it will be excellent training for the men that intend to enter the class run. This trip Saturday will probably be the only one that will take the men over the course before the interclass run and will therefore be their only opportunity to become acquainted with the way and the peculiarities of the country.

The spring run itself is attracting considerable attention as it is to be an annual affair from now on, taking the place of the intercourse run. The choice of captains by lot and the choosing of teams, where every man running is to score, will give two evenly balanced teams that should make the scoring close.

The men will leave the Back Bay Station Saturday at 2.40 for Highland, where the run starts. The course is about four and a quarter miles long, being considerably shorter than the distance covered in the two runs this spring, and will probably allow the men to finish by four o'clock. The fare for the trip is twenty-five cents.

SHOW REHEARSAL

A full rehearsal of all the departments of the show will be held in the Union this afternoon. The pony ballet will meet in the dining room of the Union with Mrs. Adams.

SOPHOMORE BASEBALL

All candidates for the 1916 baseball team are to report for practice at the Field tomorrow. A few of the men have been working out daily at the Gym, but it will take some good hard practice to round the squad into shape. As the first game will be played in a few weeks it is important that every man be present.

CLASS DAY COMMITTEE

The first meeting of the Senior Class Day Committee will be held today at 5 P. M. in Room 8 Eng. C. It is essential that all members be present as the marshals for Class Day are to be elected at this meeting.

One hundred and fourteen co-eds are out for track at the University of Washington, according to a Seattle newspaper.

The Mask and Bauble Club at Illinois will present a new farce-comedy, "Higher Up" on Saturday afternoon and evening.

Twenty men received a "B" in track at Brown, the other day.

roads after ten years time pointing out the deterioration that has taken place and the speaker will explain the cause of the decay.

Full details of the paving plants will be thrown on the screen allowing the men to get an idea of the first steps taken before actually beginning the road construction. Pictures of the laying out of bitulithic roads such as are commonly seen in the larger cities will also be shown.

Professor Breed has seen the pictures before and heard the talk and thinks that it would be of advantage to all the men that can be present to do so. The committee in charge expects a large crowd to turn out as this is a feature meeting of the society and a ladies' night.

"TRUE MANHOOD."

(Continued From Page 1.)

ployers badly, and are thus at a great disadvantage. He cited a case where an expert in a certain line was discharged, and a less capable man was employed, merely because the former made his chief "sick at his stomach." Besides, good bodily care counts in the third cornerstone, which is the efficiency so heralded of late.

Efficiency is the one thing which the world is demanding more than anything else in these days of marvelous accomplishments and keen competition. It is therefore evident that no one should indulge in practices which would in any way lower his abilities. Mr. Kempton expressed a strong aversion to the cigarette evil, saying that the unscrupulous manufacturers used dope to develop the habit. He also said that an even more important question was that of intemperance, giving several examples of the injurious effects of liquor.

The greatest necessity of all, however, is a strong, firm faith in Christ,—a faith unshaken by ridicule and unaffected by misfortune. Rev. Mr. Kempton had to make his own way in life, beginning at the early age of thirteen; and he emphatically states that without a firm belief in the friendship with the Saviour he would have gone down as did several men he knew. He kept this belief in the face of doubt, argument, and ridicule, and is completely convinced that faith is the foundation stone of all foundation stones of all lives.

The Cadet Corps was really excited yesterday over the notice about "No Drill."

CHEMICAL SOCIETY HEAR PROF. COMSTOCK

Talk Tonight on Relation of Physics to Chemistry—Plan Trip.

Prof. Comstock will speak to the Chemical Society in the Union at seven forty-five tonight. Dr. Comstock is a graduate of the Institute, class of 1904, and then went abroad to study, receiving the degree of Ph. D. from the University of Basel in 1906. He is now Professor of Theoretical Physics in the Institute.

Dr. Comstock's subject is "Modern Physics and Chemistry." He will point out the effect of several of the most recent discoveries in Physics, and will show how these have aided both Physics and Chemistry. Prof. Comstock believes firmly that these

two sciences help one another very much, and that many of these new researches in Physics will throw considerable light on some of the Chemical theories. Prof. Comstock is well known as an authority on the constitution of matter.

President Dickson will make an announcement in regard to the trip which the Society plans to make to Worcester on the first of April. The members expect to visit the plants of the Norton Alundum Company, the American Steel and Wire Company, and a large tanning and leather belt manufacturing company. The Pin and Shingle Committees will probably also make a report.
