ELECTRICAL SOCIETY HOLDS SMOKER

Mr. B. A. Behrend Addressed
Course VI Men in the Union
Last Evening.

Last evening the Electrical Engineering Society held a very successful smoker in the Union, at which occasion Mr. B. A. Behrend spoke on "The Historical Development of Electrical Engineering." Mr. Behrend is a very important figure in the electrical engineering world today, and the society was very fortunate to secure such a well known speaker. Mr. Behrend not only spoke of the historical development of electrical engineering, but also of the latest engineering projects which are now interesting the public.

Of the engineering marvels now before the people, Mr. Behrend mentioned the building of the Panama Canal. The building of the Canal was abandoned by the French because it would be of no use to them, but the Americans are continuing it because they think it will be of advantage to them. Whether the Americans are correct in this theory or not, the speaker said that the basis on which the Canal is being built is that the many rivers in the region surrounding Panama are to serve as an essential factor in its working. These rivers, however, may serve, not as an aid to the Canal but as a destroyer. Nature is bound to conquer the engineer's work at some time or other, and when it does it will destroy the Panama Canal in the same way that the middle western regions were destroyed a short time ago.

When Mr. Behrend took up the original subject on which he was scheduled to speak, he entered into a very detailed account of the development of electrical engineering. He mentioned the names of all the men to whom the electrical engineers were indebted, and among the most notable were George S. Ohm, Lord Kelvin and (Continued to Page 2, Col. 2.)

ALT WINS DUPONT CUP.

Sophomore Takes All-Round
Championship—Teeson 2nd.

The Dupont Cup, the competition for which closed Wednesday, was won by Edward E. Alt, of the Sophomore class. E. A. Teeson, '15, was second, and D. B. Baker, '15, third. Alt made very fine records in all the events in which he had trials, and showed clearly his right to the all-round championship. He was closely pressed by Teeson. Baker was many points behind these two.

The Dupont Cup is competed for annually by members of the two lower classes. All the events are divided into three classes, and each man selects three events, one from each class. Each competitor receives a certain number of points in each event, the number depending on the excellence of his performance. The trials are made in the Spring and Fall, and the points made each time are totaled. The one making the greatest total is the winner.

The events selected by Alt for his Spring trials were the broad jump, discus throw and hundred yard dash. Coach Kanaly has not yet computed the exact scores of the men, but will do so in time for Monday's issue of THE TECH.

REV. MR. STOCKDALE ANSWERS QUESTIONS

Speaker at Last T. C. A. Talk
Conducts Question
Box.

The last T. C. A. talk of the season was given yesterday, in the form of a question box, conducted by Rev. Allan A. Stockdale of the Union Congregational Church of Boston. The Rev. Mr. Stockdale spoke for the T. C. A. once before when he conducted a similar question box.

The first question was: "Frequently a man with high ideals goes to bed at night with the feeling that he has not lived up to those ideals during the day just past. Will religion help him to realize his ideals?" Before answering this Mr. Stockdale said that his talk was merely an expression of his opinions, and that he did not pretend that he was infallible. He then said that a man should not expect to live up to his ideals in one day, or to do so at all. The ideals should be so high that it would be a practical impossibility to live up to them. By placing the standard so high men will be constantly improving and will not reach a point where they feel able to stop. The important question is, has the man made an honest effort to live up to his ideals? Mr. Stockdale believes that the greatest help religion can give a man in this is in enabling him to keep his ideals clearly before him. The task of right living is made easier by con- (Continued on Page 3.)

M. E. SOCIETY TRIP.

Tour Made of International
Engineering Works.

Wednesday afternoon the 1914 men in the Mechanical Engineering Society took a trip to the International Engineering Works, formerly the Rob Engineering Co., at South Framingham. A complete tour of the plant was made, and everyone derived a great deal of benefit from the visit.

Mr. J. W. F. McDonald, who gave a talk here last Friday before the society, conducted the party around the plant. They started in the drawing room, going through the pattern shop, the stock and supply room, the large floor where the boilers are laid out, the punching and cutting room, and through other parts of the plant where the small details are carried on.

The men who took the trip were very much pleased with the pains taken to show everything of interest to them, and the fact that they were given practically the free run of the plant.

FRESHMAN TRACK MEET.

A dual track meet has been arranged between the Freshman team and a team representing the High School of Commerce of this city. The entries for both teams will be unlimited and the first four places in each event will be awarded 5, 3, 2 and 1 points, respectively.

The events which have been scheduled include the 100, 220, 440, 880, mile, 120 high hurdles, 12-lb. shot-put and the high and broad jumps.

Admission to the event is to be free and a large number of entries is expected at the Field on Tuesday, May 13, at 4 P. M.

REPORT ON NEW CO-OP. PRESENTED TONIGHT

Result of Investigations to Be
Announced at Open
Meeting.

The report of the investigation of the Technology Co-operative Society which has been made by Comber, Hammond, King and Sampson of the class in Argumentation and Debate will be presented at a meeting to be held in the Union tonight at 7.30. This subject is one which concerns every student inasmuch as the investigators claim that their plans, if carried into effect, will secure lower prices at co-operative stores than are available at present.

The meeting is open to all who are interested. Professor Pearson, who has been instrumental in arranging this meeting, feels sure that all those who attend will be well repaid for their time. Some interesting comparisons have been made by the investigators between the prices which are charged for various necessities of the students at Harvard, Tech and some of the Boston stores.

FRESHMAN TEAM LOSES TO B. L. S.

Three Freshman Pitchers Were
Unable to Hold
Schoolboys.

Wednesday afternoon the Freshman baseball team went down to defeat at the Field before the hard hitting Boston Latin School team. The final score showed the Latin School in the lead 14 to 5. The Freshman team showed a woeful need of practice, but, nevertheless, played a fairly good game. Three pitchers went into the box for 1916, but were unable to overcome the lead which their opponents piled up in the early stages of the game. Smart, who started as the Freshmen's twirler, showed great lack of condition, and was very wild. Burkhardt, who succeeded Smart on the mound, was a little better, and lasted until the ninth, when Lovejoy (Continued to Page 3.)

TENNIS TOURNAMENT.

Many More Entries Desired at
Once—Insignia Awarded.

A short time ago the management of the tennis team issued a call for entries for the annual Spring tournament, but up to the present time only two teams have entered in the doubles and five individuals have signified their intention of participating in the singles. The management wants ten or fifteen more entries in the singles, and six or eight teams more for the doubles before starting the tournament. All who are intending to enter should leave their names at the Cage today for J. M. Beale, so that if a sufficient number of entries are secured the drawings may be made at once and the tournament started in full swing on Monday. The management is anxious to start at once, in order that the tournament may be finished before the end of the term.

The entry fee is fifty cents for the singles and seventy-five cents per team for the doubles. It is to decide the Technology championship, and the winners of both singles and doubles will be awarded a I.T.T.

ELECTRICAL SOCIETY MAKES EVENTFUL TRIP

First Section of Society Views
Telephone Exchange
Yesterday.

The first section of the Technology Electrical Engineering Society made its trip through the Milk Street Exchange of the New England Telephone and Telegraph Company yesterday afternoon. At the building the men were divided into squads of four each, led by one of the company's employees. While each squad traveled a different route, they all saw the whole and were at liberty to ask any questions they might wish.

The first section visited was the new exchange on the fourth floor. Here the squad was initiated into the mysteries of a telephone call. The boards are divided into two kinds on opposite sides of the long room, the "A" boards for calls coming from or through another office. In the modern system, when a subscriber desires to be connected with another exchange, the girl answering the call pushes a button and connects with the main operator on the other side of the room. The main operator instantly assigns her a disengaged trunk line and the girl slips the plug into the "jack." The main operator at the same time that she assigns the "jack" has called the desired subscriber in the other exchange. The two operators do their work almost simultaneously, and by means of this team work the time required to complete a call is reduced to a minimum. Not only can three girls answer each call, but each line is connected to the multiple or section on each side of the prin- (Continued to Page 2, Col. 2.)

TECHNIQUE ELECTIONS.

Alt Chosen Athletic Editor—
Fulton Societies' Editor.

The Technique, 1915, Electoral Committee announce the election of Edward E. Alt for the position of Athletic Editor, and Francis F. Fulton for Societies' Editor.

Both of these men are in Course IV. Alt belongs to the Sigma Alpha Epsilon Fraternity. He tied in the election for class president this year, has run on the class relay team, and has been prominent in track athletics.

Fulton is a Delta Upsilon man. He has played on the class football team and was secretary of his class last year. Both men are serving on the present Electoral Committee.

WEATHER.

Forecast for Boston and vicinity:
Fair; moderate to brisk winds.

CALENDAR.

Friday, May 2, 1913.

- 2.00—E. E. Society Trip to N. E. T. & T. Co.—Milk Street.
 - 4.00—Institute Committee Meeting—8 C.
 - 4.10—M. E. Society Meeting—11 B.
 - 4.15—Biological Society Meeting—43 Pierce.
 - 7.30—Plans for Co-Op.—Union.
- Saturday, May 3, 1913.
- 8.00—Chauncy Hall Club Smoker—Union.
 - 1914—Cambridge Game.
 - 1916—Tufts Game.
 - Handicap Track Meet—Field.

FRIDAY, MAY 2, 1913

The banquets and elections now being held by the various professional societies call to mind with more than usual vividness the numerous virtues of these societies, and cause us to advise all students not now members to join the organization in their own course before leaving for the summer, in order that they may start the year already a member when they return in the fall.

The function of these societies is by no means confined to increasing one's professional knowledge, or to providing speakers for smokers, etc. The social side of the society is perhaps the more important to a great majority of the fellows, for it offers an opportunity of meeting one's fellow students and for a general mixing that is hard to surpass at Tech, where a very great want in this line is apparent. This social intercourse is a very important part of any college life, and because of the difficulty in securing a sufficient amount of it here, every opportunity in this line should be immediately grasped. In addition to this social life these societies offer splendid opportunities to hear and meet some of the big men in the profession, to learn how the big jobs of the day are done and to keep in touch with the most up-to-date methods of the day.

With these many advantages offered the Tech man who wishes to get all that is possible out of his school life he cannot afford to neglect this opportunity.

POWER PLANT LECTURE.

The Mechanical Engineering Society is to hold a meeting this afternoon in Room 11 Engineering Building, B, from 4 to 5 o'clock. An illustrated lecture on the new power plant of the Pacific Mills at Lawrence is to be given by Mr. Charles T. Main, a prominent mill engineer. The meeting is not confined to the members of the society, and any who are interested to hear Mr. Main are cordially invited to attend the lecture.

BIOLOGICAL SOCIETY WILL HEAR MR. KERR

Talk on Artificial Clam Culture to Be Interesting and Instructive.

This afternoon, at 4.15, in 42 Pierce, the Biological Society will hold a meeting, at which a talk by Mr. Andrew Kerr will be given. The talk on "Clam Culture" should prove to be very interesting, as Mr. Kerr is especially fitted to present his original idea in an original way. Mr. Kerr studied Biology at the Institute from 1902 to 1904, and has since been making a careful research study of clam culture. He has leased a number of acres of sea bottom from the State and planted clams there; in this way he was enabled to make a special business of the artificial culture of clams. The talk will be illustrated with lantern slides showing the production of the cultivated shell-fish.

ELECTRICAL TRIP.

(Continued from Page 1.)

cial "jack;" in this way it is possible for any one of nine girls to answer, and so it is seldom that one needs to wait more than a second or so. The rear of the boards, with its mass of complicated wiring, was carefully explained in detail.

After the examination of the switchboards the students were conducted to the eighth floor, where the main cables enter, and are distributed. Careful provisions are made against the entering of lightning or power current. An ingenious fuse grounds the dangerous current immediately. The relays and the meters were explained fully. The power is supplied from storage batteries, which are constantly being recharged. A very interesting object on this floor was the ringing machine; when the subscriber called does not answer the machine rings two seconds and waits four, rings two and waits four. This machine furnishes the "busy" sound and the "howler" to notify the subscriber that he has not hung up his receiver.

The main exchange on the ninth floor was next inspected. This is the largest exchange but one in the world. It is operated on the older system, but a new "up-to-the-minute" one is soon to be installed there. As in the exchange on the fourth floor, the whole system was gone over and explained minutely.

On this same floor are the rest rooms for the girls between their three-hour shifts. These are very attractively furnished and every provision made for the comfort of the operators. There is a dining room in the building for the employees.

The neatness, rapidity and general efficiency made a very favorable impression, and one can see here the last word in modern management. All members of the Electrical Society who did not go yesterday will miss a treat if they do not make the trip scheduled today at 2 o'clock. The society should feel very grateful to the telephone company for the courtesy tendered them. All questions are fully answered and the men were requested to ask them rather than leave without a full comprehension of the system.

E. E. SMOKER.

(Continued from Page 1.)
Tessler. In conclusion Mr. Behrend cautioned the men not to accept the traditions handed down by the preceding generations without questioning them. The meeting was then thrown open for general questioning, and during the interval before adjournment many pertinent questions were asked.

The Junior class has a baseball team which is likely to keep up to the record made by its basketball team last winter.

If Curtis continues to improve Tech seems sure to win points in both hurdles at the N. E. I. C. A. A. games.

Fast work was given all the men yesterday.

1916 DEFEATED.
 (Continued from Page 1.)
 went in and struck out three men. In the third inning the Latin School piled up enough runs to capture the game. Six runs, the result of hard hitting on the part of the schoolboys, and a series of bad errors on the part of the Freshmen, crossed the plate in the B. L. S. half of this session. The game, as a whole, was poorly played, although the Latin School showed a fine hitting ability. The lineup for the Freshmen showed DeMerritt at first, Morse at second, Tapley at short, Petit at third, Ross in left field, Krigger in center, and H. R. Stewart in the right garden. The battery consisted of Smart, Burkhardt and Lovejoy, pitchers, and Captain Murphy, catcher. Captain Murphy starred for the Freshmen, catching a great game, and helping his pitchers wonderfully. Krigger and Ross also played a very creditable game.

Tomorrow afternoon the Freshman team battles with Tufts' Dental School at the Field. The management is expecting a large crowd of supporters from the class of 1916. The probable lineup is as follows:
 Smart, p.; Murphy, c.; Drake, 1b.; Morse, 2b.; Tapley, ss.; Petit, 3b.; Krigger, rf.; Ross, cf.; Connelly, lf.

T. C. A. TALK.
 (Continued from Page 1.)
 stantly keeping the ideals before one by prayer and the study of the Bible.

The next question was: "Can a man be a Christian without believing in Christ in the same way that church members do?" The answer to this was: Yes. Mr. Stockdale said that many men who do not believe in churches lead upright and useful lives, helping their fellow men. Such men, he said, are true Christians in the broadest sense of the word, regardless of their theological beliefs. But he said that he believed churches are a good thing because they organize the upright people into an active body which has more power for good than the separate individuals could have themselves. For this reason he advised every person who desires to lead a Christian life to join some church.

Then he took up the third question, which was, in substance: "Should beer be served at Technology banquets?" He said that only one argument occurred to him in favor of serving beer at Technology. This was that if the men could not get beer at the Institute functions they might go to worse places for it. On the other hand, he said there were several reasons why a public institution, especially a college, should not encourage drinking in any way. At college dinners or smokers there is usually an outburst of school spirit, and this in itself acts as an intoxicant. The men are usually in a high state of excitement, and consequently are more likely than at other times to take too much if beer is served.

If beer is served a man is liable to be called a mollocoddle if he does not drink it. A man can be manly without drinking or indulging in any bad habits, but if his fellow students call him a mollocoddle he is likely to forget this and drink to prove his manliness. The serving of beer at Technology tends to put such a temptation

T. C. A. TALK

(Continued from Page 3.)

in the students' way.

Mr. Stockdale said that the minds of many men are not mature when they come to the Institute, and they are liable to contract habits which they could avoid if they were older. If the men need beer let them get it on their own responsibility, but the Institute cannot afford to be responsible for subjecting them to temptation or wrong influences. The Institute will get the blame for bad results of its student banquets, hence no liquor should be offered at these functions.

Another question was: "Can a man be a Christian if his studies do not allow him to go to church?" Mr. Stockdale said that a man could be a Christian without going to church, but that the Institute courses should be so arranged as to allow time for religious duties. He said that no other educational institution in Boston pays less attention to the physical, social and religious welfare of its students than Tech. The courses here are so hard that many men do not have time to attend to these sides of their development. He said that every student requires the necessary time for work outside his school courses, and that the Faculty should make a point of so planning the courses as to allow this time.

The last question answered was whether the old supernatural religion of fear would not disappear before the progress of science. Mr. Stockdale replied that it had already disappeared. The present world no longer believes in the superstitious religion of the unknown and awful, nor in the flames of hell. Present-day religion is practical. It manifests itself in cleaning up cities, in seeking to improve the condition of the poor and delinquent, in studying the labor question, and in bettering the world by every means. The old narrow questions of dogma and theology have been abandoned.

Next week there will be a meeting of the men interested in helping next year's Freshmen in the small room of the Union. Dean Burton will speak to the men.
