The Rev. Mr. J. A. Richards in his talk given at the Union yesterday, spoke of "The Spirit of Adventure," both in a scientific and a religious sense. He pointed out how the spirit of adventure did not originate from Columbus. The discoverer of America was not the first man to conceive the idea of arriving at the Indies by sailing west, for he was the first who had the courage to test the value of his ideas. As a result, the dreamers who have proved their theories have been forgotten, but the practical men who did the work will be remembered always.

Mr. Richards said that the conquest of the field of knowledge required as much as the feat of Columbus. The thinkers who have discovered the world of knowledge have been with the pioneer instinct, men who have had the courage to follow their hunches and paths of thought. He likened this work to the exploration of the American continent. The explorers worked separately but all with the same main idea, the same spirit of pushing out into the unknown and adding new regions to the old works.

He cited examples of the spirit of adventure in the discovery of the inconsiderable electric light by Edison and in the building of the Panama Canal. In both cases something was being done that had never been done before and, the pioneers were exploring fields others dared not.

The speaker said that the same spirit of adventure is found in the field of music and of athletics. Many men who are not bound by old habits of thinking are the men who succeed and who are remembered afterward. Abraham was an adventurer of thought. Many of the ideals in religion and morals, he attempted consistently to live up to them. It was this spirit that made him a great man of his day.

Mr. Richards said that there are many men who fail merely because they have not the spirit of adventure in morals. They are not strong enough to think for themselves in religious things or else are not strong enough to carry out their own ideas. They follow the crowd and do things they do not really care for, thinking what others do them. It is not enough to accept the decisions of others on moral questions, because that is merely following tradition. What a man should do is to think of his problems and reach his own conclusions; he should find for himself the best possible ideals and live true to them in spite of all other influences. Finally, Mr. Richards said that the course out of a man attains the highest life, for "To the adventurous spirit and no other will God show His face."

The Freshman tug-of-war team showed up well in practice yesterday.

C. E. SOCIETY HOLDS MEETING TONIGHT

Prof. Breed to Give Illustrated Lecture on Lynn Grade Crossing Work.

The first regular meeting of the year of the C. E. Society will be held this evening in the Union at 8 o'clock. All members and guests belonging to the three upper classes in Courses I, XI and IV, Option 2, are eligible to join the Society and are invited to come to the meeting. The speaker of the evening will be Prof. Charles B. Breed of the C. E. Department who will talk on "The Abortion of Grade-Crossing at Lynn." Arrangements are now being made for the future meetings and trips, the plans of some of which will be given out at tonight's meeting.

The work which Prof. Breed has charge of at Lynn has been in progress for several years and has been recognized as one of the greatest feats of engineering work of its kind that has ever been done. The principal feature of the work is the entire nailing of the structural steel in concrete. The cost of the work has so far amounted to over three million dollars. In the course of the construction Prof. Breed has taken numerous photographs illustrating the different phases of the work, and he has had these made into lantern slides which he will show in connection with his talk. All the men who were at Summer Camp know what an interesting talker Prof. Breed is, and President Merrill of the Society hopes that they will all be present to hear Prof. Breed.

Refreshments will be served to all present. It has been decided to give each member a single upon payment of the initiation fee of $1.00, instead of charging extra for them as has been the case in past years. The dues of the Society are 75 cents a year.

TUG-OF-WAR PRACTICE

Freshmen Not Afraid of Mud - Light Anchor Men.

Although the ground was extremely muddy yesterday afternoon, about twenty men turned out for 1917 tug-of-war practice. After pulling against the post for some time, sides were chosen with a coach for each side. All the men pulled with a will and showed a fine spirit.

The tug-of-war teams this year are considerably lighter than the 1916 men who turned out for that position last year. They pull strong but the manager would like to see some heavier men out for the end of the rope.

WEATHER

Probable rains; brisk to high northerly winds.

MR. RICHARDS TALKS ON SPIRIT OF ADVENTURE

T. C. A. Speaker Gives His Ideas On Pioneer Work In Science and Religion.

The Rev. Mr. J. A. Richards in his talk given at the Union yesterday, spoke of "The Spirit of Adventure," both in a scientific and a religious sense. He pointed out how the spirit of adventure did not originate from Columbus. The discoverer of America was not the first man to conceive the idea of arriving at the Indies by sailing west, for he was the first who had the courage to test the value of his ideas. As a result, the dreamers who have proved their theories have been forgotten, but the practical men who did the work will be remembered always.

Mr. Richards said that the conquest of the field of knowledge required as much as the feat of Columbus. The thinkers who have discovered the world of knowledge have been with the pioneer instinct, men who have had the courage to follow their hunches and paths of thought. He likened this work to the exploration of the American continent. The explorers worked separately but all with the same main idea, the same spirit of pushing out into the unknown and adding new regions to the old works.

He cited examples of the spirit of adventure in the discovery of the inconsiderable electric light by Edison and in the building of the Panama Canal. In both cases something was being done that had never been done before and, the pioneers were exploring fields others dared not.

The speaker said that the same spirit of adventure is found in the field of music and of athletics. Many men who are not bound by old habits of thinking are the men who succeed and who are remembered afterward. Abraham was an adventurer of thought. Many of the ideals in religion and morals, he attempted consistently to live up to them. It was this spirit that made him a great man of his day.

Mr. Richards said that there are many men who fail merely because they have not the spirit of adventure in morals. They are not strong enough to think for themselves in religious things or else are not strong enough to carry out their own ideas. They follow the crowd and do things they do not really care for, thinking what others do them. It is not enough to accept the decisions of others on moral questions, because that is merely following tradition. What a man should do is to think of his problems and reach his own conclusions; he should find for himself the best possible ideals and live true to them in spite of all other influences. Finally, Mr. Richards said that the course out of a man attains the highest life, for "To the adventurous spirit and no other will God show His face."

The Freshman tug-of-war team showed up well in practice yesterday.

TECH MEN ATTEND UNION CHURCH SOCIAL

Nearly a Thousand Students Present At Informal "At Home." Nearly a thousand college students, many of them from Technology, attended an "At Home" in the Union Congregational Church last night. After a reception by Rev. and Mrs. Stockdale, Rev. and Mrs. Scott and Rev. Carl G. Badger, a brief program was given in the auditorium.

The students then descended to the banquet hall, which was decorated with over 150 college banners. A series of fires and the social became very informal, college songs were sung and the yells of the various colleges represented were given. The percentage of Tech men present was large.

MANDOLIN CLUB

First Concert November 11th—Large Crowd At Rehearsal.

The Mandolin Club held its first rehearsal yesterday afternoon at 4:15 in the Union. There was a very good attendance and the club room proved to be larger and more satisfactory than this year than ever before. Rehearsals will be held Mondays at 5 and Wednesdays at 4:15. At the rehearsal yesterday two selections were played with great success considered to be the fact that it was the first time that the members had played together.

In accordance with a new ruling of the Executive Committee all men will be fined 50 cents for cutting rehearsals and one dollar for concerts. The Combined Musical Clubs will hold their first concert November 11th.

WRESTLING TEAM

Jack Butler Practicing at Gym with Team.

The wrestling team this year will undoubtedly be greatly benefitted as "Jack" Butler, the former middle-weight champion of the world, is going to work with the men on the team for a short time. Butler has not been engaged as a coach for the men, but is working out with them in order to keep in good form and in good practice. The men on the team will probably be able to get a large number of good points in this way and good experience.

ELECTRICAL ENGINEERS VISIT POWER STATION

First Section Went to Lincoln Power Station Yesterday—Best Go Today.

About twenty members of the Electrical Engineering Society went on the first trip to the Lincoln Power Station yesterday afternoon. The men were accompanied by Asst. Prof. W. E. Wickenden, who explained the details of the various appliances. One of the chief operators of the plant acted as a guide and answered the many questions that were fired at him during the visit.

The generators in this station are of the old-fashioned reciprocating type which is fast being replaced by the more modern turbine engines, which take up about on-tenth of the space occupied by the older type. The five generators here have a capacity of about 15,000 horse-power. The men were not permitted to stand in the main switch board, but the chief interest centered on the various wheels, gears and shafts that make the modern generators possible. The trip ended in the afternoon and the men returned to their dormitories after a most interesting and educational visit.

SOPHOMORE FOOTBALL

Captain To Be Elected This Afternoon at 5:30.

Sophomore Football practice has been tremendous this week due to the poor weather. Field Day is only three weeks off and Manager Buttons was to see every candidate out regularly from now on until the end of the season. This afternoon the choice of Captain will be held and every member of the team will be allowed to vote. The meeting will be held at the close of the regular practice and any football questions brought up to take a request to report at the Gym, at 5:30 if they are unable to report for practice at 4:00 o'clock.

CALENDAR

Friday, October 17, 1913.

1.00-1915 Governing Board—at Rogers.
2.00—Electrical Engineering Trip—Leave Lowell Building.
4.30-1916 Tug-of-War—Gym.
4.40-1917 Football—Field.
4.45-1915 Relay—Field.
5.00—Glee Club Rehearsal—Union.
6.15—Civil Engineering Society—Union.
Saturday, October 18, 1913.

2:30—Hare and Hounds—Leave North Station.
3:00—Preliminary Meet—Field.
4.00—Glee Club Rehearsal—Field.
5.00—Mandolin Club.
THE TECH

The death of a student at Morrisville, in Missouri, from the effects of knife wounds inflicted by a fellow-student whom he had just assisted in hazing, and the hospital experience of a Dickinson College freshman who had had the word "fresh" burned with acid into the skin of his forehead, represent a lingering and sporadic adherence to a sort of barbarism not uncommon in American colleges less than a generation ago, but happily fallen into disfavor in all the more important of them within the last few years. Not that all forms of hazing have disappeared from college life; perhaps that were not altogether desirable. Such forms, however, as branding and other mutilating and life-endangering devices, are, for the most part of the past. College sentiment, as well as general public sentiment, is intolerant of them; and whereas forms which were not altogether desirable, so far as they did not amount to a lot of a dozen such cases to have been reported by this time in the college year, two and two would be added up to attract country-wide attention—and in one of these (the one which resulted fatally) the stabber was a hazer and not a hazee, and published accounts of the affair contain no indication that the stabbing was done in defense of the stabber's life.

There appears to be considerable difference of opinion among college graduates as to whether every form of hazing is an unmitigated evil, but all seem inclined to agree that the most active and confirmed hazers are apt to be those who, in their fresh-man year, received—if such a thing be possible—too little hazing; for it has long been a matter of observation and comment among college upper classmen that the sophomores who were let off earlier as freshmen committed the most ardent deviations of hazing.

Statistics show that for the past two years the technical schools throughout the country, in general, have reached their maximum in the number of students enrolled and in a few cases are even showing a slight falling off. At first glance this might seem to indicate that the demand for technical schools is decreasing. The assumption has proven erroneous, however, by the records of the employment bureaus in the schools affected, which show that the demand greatly exceeds the supply. A significant fact is that all connection is that the greatest demand comes from the large companies. Looking further for the true cause of this condition, we find it to be due largely to two facts—a higher standard of entrance, and the stimulus which the agricultural courses have received lately. The enrollment in the latter is now increasing in leaps and bounds just as that in the engineering courses did a few years back. This may be attributed largely to the agricultural schools being, for the most part, recipients of state aid and having less exacting entrance requirements.

The temporary blip in the number of students in the engineering courses is not to be deplored, however, for the smaller classes can be handled more satisfactorily and given closer personal attention, improving the quality of the product of the engineering schools. Moreover, from a purely economic point of view, the greater ratio of demand to supply makes the more the technical graduate will command.

Junior Class Notes

The Junior Class will be due Wednesday, October 22d. No ballots will be received after that date. If a candidate is in accordance with the class constitution no voices will be counted unless the voter has paid his dues.

Junior Council

The Council will be due Wednesday, October 22d. No ballots will be received after that date. If a candidate is in accordance with the class constitution no voices will be counted unless the voter has paid his dues.

ACCOUNT

It gives us pleasure to advise our customers and friends that a complete assortment of the most popular Fall and Winter fabrics awaits their inspection.

Good workmanship, exact fit, the best possible workmanship and prompt service are the points upon which we do business.

THE TECH, BOSTON, MASS., OCTOBER 17, 1913.

Activities At Tech Field—Exceptional Opportunity for New Men.

Tech Field is unusually industriously used this year by the many candidates for the various teams. Coach Johnny O’Brien, aided by members of last year’s victorious team, is fast whipping the promising freshman candidates into a winning combination. Coach Kanaly is daily increasing his list of candidates for the class relay teams. The regular track men are showing up in preparation for the handicap meets on Oct. 18 and 25th.

Nevertheless, it is strange to note that there are a few events which are comparatively neglected. During the fall, weight men are often busy with gridiron and football, which leaves an exceptional opportunity for new men in these events, particularly in the fall handicap meets.

Here is a chance for men who have never competed before to start with every encouragement for success. Fully two-thirds of the requisites for a good weight or field event man is simple perseverance and enthusiasm.

Captain Guething would like to see more candidates report at the Field and enter the Fall Handicap Meets.

SOPHOMORE RELAY

Indifference Shown—But Few Out Regularly.

The Sophomore Relay Team is not showing up in such good form as was the case last year. But few men in comparison to the number that could come out are showing up. There are about fifteen men that are practicing and some of them only with indifference. The average number turning out every day for practice is about ten. There are twelve places on the team that have to be filled, and besides two substitutes. The small number to choose from cannot result in as good a team being picked as was the case if there were more out.

There are quite a few of last year’s team that are not back at the Institute and so there is a good chance for a few men to make good. Management desires that all the men that can come out to the Field and practice do so at the earliest possible time as Field Day is only a short way off. The most promising of the candidates that are out are Loomis, Hine, Dean and Reed of last year’s team. These men have been practicing quite regularly and are in pretty good form. Others who are out are Comiskey, Pach, Goldstein, Hayes, Kittredge, and Lieber.

FRESHMAN FOOTBALL

Practice Daily At The Field—Sound Working Hard.

The Freshman Football Squad is holding practice regularly at the Field. Considering the unfavorable weather conditions which have been prevalent during the last two weeks, there has been a comparatively large number of candidates on hand at every practice. The squad has shown a great deal of class spirit and enthusiasm, and are working their hardest towards victory on Field Day.

Manager Atkins wishes to see a large squad out for practice this afternoon at the Field at 4:15. Coach O’Brien will be on hand to drill the men.

Slides rule lectures are being held every Thursday at 4 in 11 Eng. B.

FRESHMAN RELAY
Trials Monday - Possibility of Meet With Andover.

In spite of the unfavorable weather conditions and the poor condition of the track, Freshman Relay practice is being held daily at the Field. The squad is working hard and with enthusiasm. Manager Friend reports that the outlook is very favorable, and that nothing short of a clearance may be expected on Field Day. The Preliminary Trials will be held Monday, October 20th, and the Finals October 30th. Friend is trying to arrange for a meet with Andover soon after Field Day.

GLEE CLUB REHEARSAL

There is to be a rehearsal of the Glee Club this afternoon at 5 o'clock in the Union. Every man whose name in yesterday's TECH is expected to be present. They should call at the Cage to get the new music which they are to learn, and should know the words of "Take Me Back to Tech."

1915 GOVERNING BOARD

There will be a meeting of the Sophomore governing board today in 21 Rogers at 1:00 o'clock. All the members are urged to come as important business is to come before the committee.

SCIENTIFIC AND ENGINEERING NOTES

The first gold mining in Alaska was done in the so-called Jumang gold belt, where operations were begun over 30 years ago. The value of the gold produced in this region is more than $50,000,000. Most of this gold has been taken from the famous Trendwell and other mines near Juneau. The auriferous belt is, however, known to stretch for some 50 miles to the north and includes the Treadwell and other mines near Juneau. The auriferous belt is, however, known to stretch for some 50 miles to the north and includes the Treadwell and other mines near Juneau.
