**NEW HISTORY COURSE**

**HOMER ALBENS TO SPEAK TO CHEMICAL SOCIETY**

Dr. of Boston University will Talk April 9

Mr. Homer Albens, Dean of the Boston University, is to be the speaker at the next meeting of the New England chapter of the American Chemical Society. The meeting will be held in room 219 and is scheduled to begin at 7:30 sharp.

Although Dean Albens has not announced his subject or given any hint as to what it will be, it is conjectured by the affairs of the Society that the talk will befounded on the history of various organizations. This attempt will be made in this talk, the services of Professor Albens, who is also a member of the organizing committee of the New England chapter of the American Chemical Society, will be available.

SPRING CONCERT SALES OF TICKETS TO START TUESDAY

Limited Number of Tickets to be Sold.

The Musical Club management wishes to announce that the sale of tickets for its spring concert began today at the Club office. Tickets for the concert on the evening of April 17, 1918, will start on April 15. All tickets will be on sale at 8 a.m. at 9 a.m. In view of the fact that the capacity of the Fourth floor ball room is not very great, early applicants for tickets are urged to reserve their tickets to the best advantage. Those names will be listed on the whole list. Tickets may be purchased, but no tickets will be given for sale at the Club office. At last year's spring concert, tickets were sold at 50 cents with minimum war tax. The management hopes to pay the war tax. With every ticket sold there will be a donation to the Red Cross. The proceeds from the sale will be used to pay the war tax.

COURTESY AND THOUGHTFULNESS

A DAY or two ago an old lady boarded a street car in Central Square. She was very feeble, so much so that she was escorted by two other ladies. Full seventy-five per cent of the passengers were gallant Technology students, and yet not one of them traded her his place. However, at the farther end of the car sat a foreign student who is doing graduate work at the Institute. He observed the lady's feebleness, and offered his place, although the lady offered her seat to him. The student declined, but he was very glad to give it away.

American students are much more lacking in courtesy and thoughtfulness than our foreign students. Technology men should come to realize that both of these characteristics are necessary to every professional man if he is to be successful. Without them the engineer, for example, will lower himself to the level of the rough gang foreman.

The next time Max Keever calls, "Old Clothes," start rummaging around your closet. Gather up all you can possibly spare and ponder carefully as to how much you can make him pay. Put them all in a nice neat bundle. Carry them downstairs and go to the front door, say in a cheerful tone, "I have a lot of old clothes, but—I'm going to give mine to the Red Cross." Then go to the phone and have the Red Cross wagon stop—chuckling the while to think how you fooled Max and how some "little Belgians" will think how you fooled Max and how some "little Belgians" will

We are extremely concerned to acknowledge its obligations to its Faith by attending church, it may not be out of place to remind ourselves that that day—Easter—is tomorrow. There is the added inducement that some of the best religious music of the year will be given in Boston, and wonderful musical programs will be given in their churches.

The THECH'S WAR CORRESPONDENT WRITES

VIVIDLY OR ARMAMENT WORK IN AVIATION

Captain R. W. Chandler, '18 Spins Brilliant Yarn of Recreation and Duty in France—Air Service Well Equipped

HAD FUN OVER ENTIRE FRONT

By R. W. Chandler

(Special Correspondent)

The American Expeditionary Force for the first time this morning got the chance to have a kink and put aside for a few hours the hardships and dangers of war. The men in the front lines were guests of a large hotel in this city and were treated to a genuine good time. Theaye were taken to a large room which had been fitted up for a concert hall and a band was played for them. The men were shown the latest and most startling facts that the Kaiser have imposed. Only one of the many other nations which the soldiers of America and many, Belgium, or Denmark. He showed the French in the United States at the beginning of his talk, and from a very wide section of the country, telling of the progress of the war and of the latest developments. He also gave some interesting facts about the Kaiser's war and showed the men that the work is full of interest.

He also gave some interesting facts about the Kaiser's war and showed the men that the work is full of interest.

The High Pressure Hydraulics Pumps

The term "high pressure" is one that is now becoming more and more familiar to engineers and manufacturers of hydraulic machinery. The term is used to describe a class of pumps and cylinders which are designed to operate at pressures of 1000 to 10,000 psi. This high pressure is achieved by using a combination of high temperature and high pressure gas. The pumps are used in a variety of applications, including oil and gas wells, power plants, and industrial machinery.

The pumps are designed with a hydraulic cylinder and piston that are mounted in a cylinder. The cylinder is filled with a high pressure gas, which is then released to the pump. The gas forces the piston to move, which in turn moves the fluid through the system.
