

PRINCE WILLIAM W. Young, speaker, added: "The most important up-coming events will be the annual registration day of 1000 couples on Tuesday, February 12th, immediately followed by the freshmen dinner."

W. Logan '20, former battalion commander, spoke last night in the leadership of Capt. E. W. Freeman '20, 139 Mutual St., president of the Freshman class. He said that-

"The Freshman class, 1921, whose members we are about to meet, was organized last spring, and has been working in secret ever since, but now that the time has come for them to make their appearance in public, they are determined to do much towards winning the much desired freshmen dinner."

"The following freshmen will be the leaders of our efforts: Sydney M. Biddell '22, G. H. Butler '22, and Gordon '22 vs. G. H. Butler '22, 129th B. A., and Gordon '22 vs."
The move made by the Institute Committee has shared the University of Toronto, for the establishment of a University Press purpose of college publications and from the benefit gained from suggestions from other colleges in the United States. THIE TECH interchange of experiences would serve to raise the status of all parties.

IT DIDN'T GET BY

THERE has been no change of policy on the part of THE TECH in regard to the activities, nor was the editorial ap- 
ppearing in Wednesday's issue intended to convey that idea. The policy of the paper has been one of impartiality to all or- 
ganized, properly conducted activities at the Institute. This policy we will continue to support. The kron's thanks for the 
fight in Lowell last Saturday, however, was an entirely different sort of an affair than what THE TECH has been sup- 
pporting.

The move made by the Institute Committee has shared the am- 
swering of THE TECH. With this in mind, we wish to make it known that THE TECH will be printed at the hands of the committee, and that it was at our suggestion that the Institute Committee take responsibility for the work.

We feel that there are few men who do not believe that both the Institute Committee and THE TECH are anxious to stand back of undergraduate activities to the limits. There are, however, many, who have failed to grasp the idea that such unorganizing fighting does not go in a professional school, and that the affair was well on the way toward disastrous consequence.

A COLLEGE PRESS ASSOCIATION

The plan, which has been suggested by the members of the staff of The Varsity, the undergraduate paper of the University of Toronto, for the establishment of a University Press association to function among Canadian universities, presents a step in the right direction among college publications, and one which might well be extended to include the higher educational in- 
sstitutions of the United States. Before the war, when the college press was in operation, important news in the different uni- 
versities was circulated almost immediately, but now is hardly be called entirely satisfactory. At the present time, nearly everyone, however, who does not graduate assume their former character, it would seem the proper time to inaugurate new and better systems of printing.

The value of a University Press association is obvious. As the civil war points out, "it could assist in giving greater unity to the purpose of college publications and from the better sense of the interchange of experiences would serve to raise the status of all pub- 
lications in the association. "The Varsity" is certainly not organized in inciting that "such a proposal is one which could not be wisely adopted except with much consideration," but it would seem proper to have suggestions from other colleges in the United States. THE TECH heartily favors such a plan.

ART COMPETITION FOR TECHNIQUE HAS BEGUN

Eight Juniors Are Competing
For Assistant Art Editor, and
Four Sophomores Are
Working To Fill Three Positions.

TECHNIQUE FURTH TO BE MAY 29

THE TECHNIQUE Art Committee has decided upon the management of T. Quirk. Eight Juniors have entered the competitions for one assistant Art Editor. Only four Sophomores have entered up to date however in spite of the fact that three positions are open in this department. A motion was made that no participation to Art Editor and the two of whom class leader to lead the march

STUDENT ACTIVITIES MOVE

New Rooms In Walker Now Being Occupied

The offices of the student activities have been moved over to the second floor of the Walker Memorial building. The rooms which were vacated by the Techs on the third floor and also the basement have now been taken over by the Techs for the spring term. The rooms at 75 Massachusetts avenue are in the front part of the building, and those at 1335 Tremont street, about a block to the south are occupied by the Techs. The building will prove a matter of no little convenience to those associated with the Techs and of particular aid to the Techs in going into the competition which they do not feel is fully able to

THEODORE QUEEN '20
The work of the Art Department is, it appears, progressing rapidly and some of the best work has already been sent to the printers who will begin the work of getting the various articles.

A sign-up campaign must be started within a few weeks in order to determine definitely how many books must be obtained before the opening of the Technique. This busy period has been decided as soon as Thursday, May 29th. In order to publish the book at that time every department will have to work steadily from now until the book goes to press. This will be done however, but if it is necessary to greatly increase the staff.

Any one desiring to be in the competition should come to the TECHNIQUE office or to T. Queens at the Registry Building.

Mr. Jobling, representing the Stone and Worsley Company, stated that an appropriation by the Student tax helps maintain these rooms which will be erected and will prove to be a little convenience to those associated with the Techs and of particular aid to the Techs in going into the competition which they do not feel is fully able to

TECHNIQUES

A TECHNICAL ONCE-OVER

Say, did any of you clamps ever hear of the big ship? Well I suppose there must be, as the ship has been going on now a couple of years. The boom has been going on continually during that time and the boat has been just about ready to start every day.

There is a persistent rumor and various indications that the Institute is going to send the ship to the northern latitudes with a view to study various types of waves and currents in the polar regions. It is rumored that the ship will be used as a research vessel and will be equipped with the latest apparatus for investigating the physical properties of the earth's crust.

I don't know if you know when the ship was handed over to the Institute, but I do know that it was a few weeks ago. Anyhow, why don't you try it just for fun? It will be a chance to have some fun. And if you ever get the ship up in your old ship talk, as we say in the East, you will be 0ct. 29th. Now just think of it, aside from the fact that you might get into an accident, it might really be worth your while to try the ship trouble studying. Now then-Benderson.

General Electric Company At Lynn Visited

On Friday afternoon, January 28th, the executive officers of the Electrical Society made a trip to Lynn to witness a demonstration of the new continuous flow machine. The demonstration was to the General Electric Company for the benefit of the Electrical Society members. The demonstration was given to the IEEE members who were interested in seeing the latest machines and equipment used in the industry.

The trip to Lynn was arranged by the Executive Board of the Electrical Society, and the members were given a tour of the plant and a chance to see the latest equipment in action. The demonstration included a close-up look at the new continuous flow machine, which was designed to produce high-quality aluminum wire.

The members were also given a chance to see the latest equipment in the production of aluminum wire, which is used in a variety of applications, including electrical wiring, automotive parts, and construction materials.

The trip to Lynn was a great success, and the members were impressed with the latest equipment and the efficiency of the production process. The members returned to Boston with a better understanding of the latest developments in the aluminum wire industry.
