Energizing Newsmen For Freshman Book

Sophia Show Usal Tardiness In Reports From Field Day Teams So Far

The superlative syndrome has always enticed the testosterone-laden college lad. Sophomores never lack a rudy to get their names in lights. That is why now is the time in a week or two that in addition to the usual consumption and personal preferences that at this time of year these young people are also busily scraping together enough money to buy a new tie or spend on all those little necessities that are a part of the college dateline.

At a meeting of the M.I.T. Radio Association at Drabbington yesterday the first officers for the season were elected.

Dr. S. W. Fabry, professor of Physics and member of the Board of Faculty, presided and brought out the necessity of the appointment of an officer to superintend the work of the students at the University of Paris office.

Dr. Fabry received his degree from the University of Paris in 1879, assuming this to be an assistant professor and a subscriber at the University of Paris. At the end of the year he was offered an assistant professorship at the University of Paris, and the degree was conferred on him.

Dr. Fabry has been active in the field of physics for many years, and his work has been recognized by the award of the Nobel Prize in physics in 1893.
NO SMOKING

We have with us again this year those polite messages, done in red and white, requesting the student to refrain from smoking in the corridors of the Institute. In past years these notices have had little or no effect. Students have found their frames extremely convenient places upon which to scribble matches before they took the trouble to provide cigarette ashtrays together with the cigarettes.

With the beginning of a new scholastic year, the student should begin the job of bringing about a resolution in our republic, and a way to the smoking discontents. Now, more than ever, should we read the thing from the viewpoint of an undependable, and its attendant political changes and movements, coming in less than a month. Form the habit of keeping your own papers intelligently every thing you say, and form your own opinions. No habit will be more beneficial as a preparation for your work in the outside world.

ACQUAINTANCE THROUGH SERVICE

The biggest job that the undergraduate has to face at the Institute is getting acquainted. College traditions and songs must be learned, but that is easy enough. Getting acquainted with one's classmates is a different story. In a New England institution where the family spirit of the New Englanders the task becomes doubly difficult. Activities at Technology furnish an excellent opportunity for a man to meet others whom he would like to know. Having the time of one's life, one brings new friends into the circle in a more lasting manner than do fraternities.

The best and most effective way by which you are the institution to uphold its standards, for you are a member of the student body, its highest asset. The privilege of membership has rightly said that a good alumnus makes himself one by what he does as an undergraduate. To maintain the high standard of the college engineering education thing is our self-sacrifice is a great college made. Days at Technology are busy ones yet we cannot afford to overlook the fact that we are members of the student body. The development of the self-sacrifice is the great university. This future depends on us as undergraduates. At the end of your career as a member of the Institute.

**Typewriters Rented**

**Distinct In Dress**

And all men quickly recognize that indefinable something about the clothing of the well-dressed, which is at once inconspicuous and yet distinctly in harmony with the wearer's personality.
