C. A. HARRISON ’26
ELECTED GENERAL MANAGER OF T.E.N.

D. H. McLeod, J. B. Wright, E. E. Tru, G. B. Darling
Complete Board

NEW POSITION CREATED
New General Manager Has Hold Position of Advertising Manager

C. A. Harrison ’26 has been elected General Manager of Tech Engineering News, Volume VI, succeeding G. E. Hillyard, who resigned the position. The new Management Board consists of: D. H. McLeod, Managing Editor; J. B. Wright, Business Manager; Howard Cudworth, Associate Editor, who has just been created just from the Y.M.C.A. and the Printing House. Employees of the News are: A. J. Tacy, Manager of the Advertising Department; Laurence C. H. Sprague, Manager of the Sales Department; George A. S. R. Poole, Manager of the Circulation Department; and John W. Barlow, Manager of the Production Department.

WILLS CHOSSEN AS T.C.A. PRESIDENT

D. C. Hooper ’27 Elected as Vice-President—J. S. Moon ’28 Treasurer

At the annual elections held by the Technology Christian Association, Cub Monday evening, J. H. Wills was elected president of the organization, D. C. Hooper, vice-president, and J. S. Moon, treasurer. During the past year, Wills was manager of churches. Hooper is a member of the Boston Elevrated. In 1918, he was chairman of the national religious work, and has been chairman of the advertising department.

Mike Hoar, For Many Years Guardian of Track, No Longer at Technology

Balks at Assignment to Wash Windows and Loses Job

Mike Hoar, watch dog of the track, guardian of the senior section and erstwhile handicap sprint champion, is no longer be seen prowling around the quarter mile oval. Never again will Mike Hoar balled in a window washing assignment.

Another Technology tradition went into the dustbin of history when the veteran refused his dignity and thus the track crew of all A. A. Vette, Terre. Now that spring has left his crew, Mike has taken up the last laps in a steady trotting path ever since the regularity of track field for one race week so well–loved by previous track men. From the sign, "Get the hell out of there", bound to add much man the track meet.

Mike’s old rival of Nap Boopster, former track manager, is said have left the field for a position in a more steady sphere. He last was seen running a mile in two short months ago when he was bug on the running mate for a match between the track and band. Mike’s retirement means that a distance will be run at 1000 yards if he was given a place in the lineup.

Last fall he was slated to race Mr. E. E. Tru in a match of the team. Mike was slated to race this year in the Field Day, but Mike’s retirement from the track field has cost him a position as shuffling master of the famous field get a thorough and a half yard handicap. Mike's need for the position of shuttle master.

STUDENTS SLOW IN CONTRIBUTING TO BALL TEAM DRIVE

Drive Committee Sets Goal at $100,000 and Raises to $125,000

MAY EXTEND CAMPAIGN

Manager A. J. Tacy ’27 Attributes Sluggishness to Thin Wallets

During the first two days of the drive, the drive committee for the Beaver Basketball team in a campaign in order to gain funds for operations, B.T.P., will be solicited on the sale of about 250 tickets, memento giving more than the 30-cent ticket for each ticket. The committee in charge of the drive for funds has been met with a goal. The drive will end Saturday, April 11, or as otherwise. The early committee may be extended toward the close of the season.

Since the week is one–third over and not one–third the desired amount has been raised to date, the committee of the next few days will have to be extended and made to a long session.

Mr. E. E. Tru has been manager of the team and will report to the team on the progress of the week's work.

The ticket stands are:

1. $10.00—150 tickets, by the committee at $5.00 each.
2. $25.00—25 tickets, by the committee at $10.00 each.
3. $100.00—9 tickets, by the committee at $25.00 each.

The committee urges all students to support the drive, and to raise as much money as possible.

Students Getting Too Wise for Burford Ford

THERE’S GETTING TOO MUCH F.B.I. INSPECTOR TO THE TELEGRAPH R ACKNOWLEDGEMENT.

There’s getting too much F.B.I. inspector to the Telegraph Rack.

Mike’s annual race with Nap was an exciting affair when they went to the post for the last few laps of the field day. Mike has been in the habit of cutting across the field at the last moment of the race to take the final lap. This year Mike’s position was at the center of the running track. Mike’s final lap saw him running across the finish line in the last place.

C. A. Harrison ’26

K. S. LORD CHOSEN, M. I. T. A. A. HEAD FOR COMING YEAR

Gery Fripley ’26, Crew Manager, Elected President of Organization

ELECTIONS YESTERDAY

Retain Baylor as Manager of P.E.—O’Neil is Treasurer

K. S. Lord, manager of the Seamen swimming team, was elected president of the M. I. T. A. A. for the coming year at a meeting of the association yesterday. Lord succeeds A. S. A. H. Stanton, who was re-elected vice-president. Gery Fripley ’26, manager of Crew, was elected secretary, and Edger F. Bell, ’28, was elected treasurer. The elections were held at the last meeting of the organization, which is to be held at the end of the season.

More PEARL TO PLAY AT DORMANCE DANCE

According to all reports, quite a few tickets for the final dormance dance, which is being held next week, will still remain unsold. The tickets are available at the dormance door and may be purchased at any time by the students. The dormance dance will be held on Saturday night, April 11, and the committee of the charge of the affair.

More Pearl will appear in person with her friend, A. J. Tacy, to perform in a song. The night will be filled with music, food and dancing.

M. G. DAVIS ’25 MARRIES CAMBRIDGE GIRL IN N. H.

Miss Helen L. Williams, daughter of Mr. and Mrs. E. W. Williams of Cambridge, was married to M. G. Davis ’25, of 54 Eddy Street, Cambridge, at the K. S. Lord, manager of the Seamen swimming team, was elected president of the M. I. T. A. A. for the coming year at a meeting of the association yesterday. Lord succeeds A. S. A. H. Stanton, who was re-elected vice-president. Gery Fripley ’26, manager of Crew, was elected secretary, and Edger F. Bell, ’28, was elected treasurer. The elections were held at the last meeting of the organization, which is to be held at the end of the season.

College Newspaper Work
Value For Journalistic Career

The editorial section of this issue discusses the value of college newspaper work for journalistic careers. The editor mentions that the experience gained from working on a college newspaper can be beneficial for those who later pursue careers in journalism.

"For entering the field of metropolitan journalism, the college newspaper is as much as is possible the right medium of training. The college newspaper is the instrument of the experienced journalist, and the college newspaper is necessary for getting a job on a metropolitan newspaper."

D. Eaton, editor of the new ruined, and literary editor of "The Morning Telegraph."

"In conclusion, I would say that training for any man is a very good thing, but especially for the young man who is going to the young man who is entering the field of journalism."

In the Sports section, there is an article about the baseball opportunity at the Tech. It mentions that the baseball campaign is looking for new players and that the Tech baseball team is in need of members.

"The controversy over the Almer Ma- teries he apparently has little knowledge of. H~e steps aside from

Communications

To the Editor:

The subject of the Institute Committee on a college newspaper is an important one, as it is a matter which concerns every student. The committee has been formed to consider the problems of college journalism and to make recommendations for the improvement of college newspapers.

In the following week, the committee will meet to discuss the future of the Tech and to consider the possibility of making it a more serious and influential publication.

The committee is also interested in the possibility of making the Tech a national magazine, and it is hoped that the committee's recommendations will be well received by the students and faculty.

MENKEN CONSIDERED

It is Mr. Mencken who so anxiously discomposed the minds of our young acolytes," asks Christopher Morley in a recent Saturday Review. The question is witty and to the point. H. L. M. has blasted, startled, and punted his way through more than a quarter of a good season ticket, and has injected there his cynical sophistry to an extent few of the genus born-busters have witnessed.

The TECH, Volume XLV, takes pleasure in announcing the following elections to its staff: J. H. Harding, B.S., Associate Managing Editor; S. Eskin, B.S., Features Department; J. G. Collins, B.S., Staff of Treasury Department.
Ball Players Rounding Into Fine Early Season Form

While the season is just beginning, the Tech has already shown that there is much talent on its squad. Many members of the team are expected to do well in the upcoming season.

Varisty Tennis Candidates All Ready To Start

About twelve Varsity and eight freshmen candidates showed up at the start of the season. Among them, Luke Bannon, captain of last year's team, is back and looking strong. He and his teammates are ready to take on the challenge.

Why do you comb your hair?

For neat appearance, the great aid to success. Keep your hair combed all day with GLO-CO.

Beaver Ball Club On Toes For Opening Game of Series

Several days vacation from outdoor practice due to the poor weather condition has permitted the baseball team to get back on its feet yesterday afternoon at Tech field under the direction of Coach Luke Bannon. Although the weather was not up to par, the first several games showed the boys are ready to take on any team and hold their own.

FRESHMEN HAVE THE CHANCE TO BREAK RECORDS

Lack of Training Among Stars May Mean a Mediocre Year

TEAM SOPHIS ARE NOT WORRYING

The Sophomores runniers on the track squad are not backward in expressing the opinion that this year's group of freshmen runners will hardly approach the tremendous amount of training and dedication annually given by the varsity. Many members of the class of '27, now held 9.2 of the 14 records, and for this reason all are not taken care of by "Bill" Robinson provided for the freshmen.

The Sophomore is to fall by the way this spring. The marks in the last season in which event he was not one of the better men on the track squad to observe some Varsity, and have a fine chance for an easy win. Many Candidates for Outfield Position Will Be Available

T. A. A., C. fic The old question is again raised it whether a Junior should captain a team or have a consistent scorer for his team. All members of the Tech, those who are his Seniors. The A. A. captain is up to every Technology man with a science degree, and prepares them for professional practice wherever the Engineering field is.

Ready To-Start

Early is up to every Technology man with a science degree, and prepares them for professional practice wherever the Engineering field is.

Simplicity

Simplex Wires and Cables, insulated with rubber, paper, or textile covers, are designed specifically for cable work, or service in large power stations of the country.

The Tech is an activity offered unexcelled advantages in business and newspaper training. The fact that much of its work makes it unique among activities, offering unparalleled opportunity to develop associations and gain an intimate knowledge of student life.
DR. SOSSMAN GIVES SECOND LECTURE

Talks on “The Earth’s Store of Energy”—Describes Sources of Energy

At the second of his series of ten lectures on the earth yesterday, Dr. Robert S. Sossman spoke on “The Earth’s Store of Energy.” He dealt with the sources of the earth’s energy and its present disposition.

According to the disruption hypothesis as defined by the geophysical star passing near the solar system, it appears that the energy which is released into the earth now contains the energy inherent in the original mass drawn from the sun minus the energy lost in radiation and friction. This energy is present in six forms, namely, thermal, gravitational, frictional, and in intra-atomic.

Dr. Sossman also described the hypotheses accounting for the continued radiation of the sun, suggesting as the most promising the theory that the energy required is derived from the synthesis of elements from the hydrogen.

The rate of escape of energy through radiation, heat, etc., is quite high in relation to the temperature and it is found that this rate has decreased from three to one per year per gram of oxygen up to about one to 1000 of a gram at the present temperature. Then with the temperature, the rate of escape becomes lower. It is noted that the period of cooling of the earth is prolonged because of this factor. He showed a graph which pictured the rate of escape of energy.

Another point at issue is the balance in the sun’s heat. If it is found that the sun’s temperature has decreased from three to one, it appears that the rate of escape of energy is greater by a factor of 1000 in the sun. The sun’s temperature is thus in the ratio of 1 to 1000 in the present temperature. Dr. Sossman noted the ratio between the sun’s and the earth’s temperatures.

The rate of escape of energy through radiation, heat, etc., is quite high in relation to the temperature and it is found that this rate has decreased from three to one per year per gram of oxygen up to about one to 1000 of a gram at the present temperature. The rate is lower in the sun because it is a smaller proportion of the sun’s mass. However, the present temperature is still in the ratio of 1 to 1000 in the sun.

The balance in the sun’s heat is thus in the ratio of 1 to 1000 in the present temperature. Dr. Sossman noted the ratio between the sun’s and the earth’s temperatures.

The rate of escape of energy through radiation, heat, etc., is quite high in relation to the temperature and it is found that this rate has decreased from three to one per year per gram of oxygen up to about one to 1000 of a gram at the present temperature. The rate is lower in the sun because it is a smaller proportion of the sun’s mass. However, the present temperature is still in the ratio of 1 to 1000 in the sun.

Outsiders will lecture to the Sophomores who are taking Course VI and the remarkable discussion is likely to last for the full two hours. Professor and graduate students are invited to take part in the discussion.

The talk will be on the subject of “The Earth’s Store of Energy.” He dealt with the sources of the earth’s energy and its present disposition.

According to the disruption hypothesis as defined by the geophysical star passing near the solar system, it appears that the energy which is released into the earth now contains the energy inherent in the original mass drawn from the sun minus the energy lost in radiation and friction. This energy is present in six forms, namely, thermal, gravitational, frictional, and in intra-atomic.

Dr. Sossman also described the hypotheses accounting for the continued radiation of the sun, suggesting as the most promising the theory that the energy required is derived from the synthesis of elements from the hydrogen.

The rate of escape of energy through radiation, heat, etc., is quite high in relation to the temperature and it is found that this rate has decreased from three to one per year per gram of oxygen up to about one to 1000 of a gram at the present temperature.
