THE THINKER

... a telephone version

The name Electrical Thinker might be ap-
plied to one unit of telephone apparatus.
Technically it is known as a Sender and
is brought into action each time a call is made
in a panel dial central office. By means of
electrical mechanism, it records or "mem-
ber" the dialed number and routes the
call to the proper line.

The steady expansion of the Bell System
in volume of calls, number of telephones and
miles of wire — cannot be taken care of
merely by an enlarged use of existing types
of apparatus.

To serve the continually growing telephone
needs of the nation, it will always be the task
of Bell System men to devise, refine, perfect
and manufacture new kinds of equipment
such as The Thinker.
