Institute Committee Votes to Permit Extra Activity Point Rating

To the accompaniment of a little discussion, the Institute Committee on Student Affairs voted that Richard L. Fossett 33, he made President of his class, to fill the place left vacant when Edward O. MacDonald, '32, resigned, due to the demands of his law course last spring. Mr. MacDonald resigned from the Committee to carry the surplus points which would have been available to Richard L. Fossett '33, chairman of the Institute Committee, announced last night that the sign-up drive was meeting with success up to that time. In order to give the students ample opportunity to make reservations, the Committee has voted to continue the ballots until after Tuesday.

**Westinghouse Research Engineers Promote Safety by Steel Discovery**

Laboratory finds that the presence of strands in any type of steel can promote safety. In an attempt to extend the existing research to open new avenues of work, a special group of engineers was formed, under the direction of Dr. C. H. Hauck of the Westinghouse Electric Company, and it is this group that has been credited with the discovery.

Out of the research laboratories of the company, engineers have been working on the advancement of a new step forward of great importance in the field of electrical and mechanical induction. Engineers have endeavored to find a method of reducing to light pictures of the effects of strains on the structures of the steel, not knowing themselves whether or not that case, but bringing practically the entire amount of steel into the field of concern.

**Effects of Strain on Steel**

Research in this direction is not new, being over a decade old. It was known that every piece of wood has a fault of elasticity, and that if stretched beyond this point, will not return to its former state of tension. The first is translated by Hunter Rouse '20. Investigators found that a piece of overstressed steel shows very fine lines or ruling of metallic steel reveal additional lines. These years ago, a Few, a German physicist, discovered that if a steel sample was subjected to a relation containing hydrochloric acid, a patina of the specimen appeared in black relief, against the white metallic portion of the inclosed marks. Although this discovery was of great importance, its application seemed limited, because only small with the proper metal content could be successfully etched. Such steel, it was determined, would not amount to only 13 per cent of all the steel produced.

**FRESHMAN RIFLEMEN APPROACH MATCHES**

Under the leadership of Sergeant John R. Fitzgerald of the Air Antilop Corps, the freshman riflemen are approaching matches. From the beginning of the year, the men have been shooting three days a week, but the arrival of R.O.T.C. drill has slightly decreased the amount of practice. As the placement of the accuracy of the men has been somewhat reduced, the men have continued to practice. This practice is the last step before examinations cut the men off from the equipment.

**INSTITUTE LEADS IN POST GRADUATE WORK**

Registrar MacKenzie Reveals Developments Since War

One third of all graduate degrees in engineering given by the Technology, versus Registrar Joseph C. MacKenzie '13, half of all the advanced degrees in academic, chemical, and electrical engineering are also given by the Institute. When information was made available, graduate students went to Europe for study, the present is now that, the American engineers taking their advanced degrees in the new technology's rapid advancement in graduate study is explained by the aid of several graphs in this interesting article.

*What Do You Think?*

To the Editor of *THE TECH*:

Another bulletin catalogs houses on the campus. When the time is right for a "Four Years" and "Intramural" houses. Just now, the "Intelligent" people from overseas are being trained for the service of mankind. The requirement for success of the American student is a combination of good and MacGregor: the material must have a sharply defined yield point, and must be made with an exacting percentage of a nitrogen content between fixed limits. When the strain is above the yield point, the material is said to be "yelling." Currently, it must be correctly defined.

"That extra-curricular campus activities of a managerial nature are a desirable adjunct to undergraduate experience is proved by their correlations with higher salary ratings." - From a report by the Department of Business and Engineering Administration
Basketball season took a sudden drop this week, when the Institute decided to do without the presence of Menos, Rihm and O'Flaherty. Danny Ennet has been playing all over the court, and his absence will give Coach McCarthy plenty to worry about. While only one defeat recorded so far of the varsity, the Technology boxers will have plenty to do to keep up that slate, especially against New Hampshire a couple of weeks away.

That can defeat at the hands of Rhode Island still hurts. But for the benefit of other schools, they did reestablish what terrible form was after the sliding exhibition on the night of the Technology games. Wonder what would happen now in a return game.

In spite of the loss of Rihm and substitute Oldham, the Lowell Institute games still appear to be not too to keep any sleep about. Last year's game was no cinch, but this season the Lowellians have more or less hit theickets, while the Engineers seem to be to or better. All of which should mean that the Lowellians will go home without having taken over the local talent.

More unhappy tidings come from the wrestling team, for it, too, has suffered another loss. The young man in the case is Capt. Joe Waskett, whose pitch has been performing so as to extent that it looks as though he is definitely out. Last season Joe did all his point getting for the marines, so it is tragic indeed that he will be lost for the remainder of this season. Hockey prospects do not look good, even the prospect of playing games does not look promising. Next week's schedule includes Brs. Babs, New Hampshires, Dartmouth, and Northeastern, all to be played supposedly on outside rinks. The Dartmouth game is the most probable to come off, but others may not come off, on account of Boston's indifferent weather.

Track enthusiasts will welcome the BA.A. games at the Arena tomorrow night, with special attention going to the various relay teams. Likewise the Navy gym team tomorrow afternoon will give the Beavers some real competition, perhaps too stiff for the local boys to handle.

BAD CHECKS

Seventy-five bad checks are passed each day at the University of Minnesota, con- duced a recent survey.

BEAVER BRAWN

Basketball Minus Two Stars in Game

Three Engineers Entering Squash Intercollegiates

McHugh, Newman and DeGive Make Trip to Trinity for Squash

Technology will send three varsity squash players to Trinity College, Hartford, today, to compete in the Intercollegiate matches. All the players are expected to click this afternoon and tomorrow afternoon. The matches will be played on the third floor of the Litchfield Institute Gymnasium.

Burler Twists Bags

While the men are playing at Trinity, all the Institute squash teams will be engaged in matches. The varsity "A" team will play the University of the Institute, the varsity "D" team will play the Harvard Club; the Faculty-Graduate team is scheduled to play the Massachusetts Institute of Technology and the Freshman team will play an outside team.

Chairman E. W. Roberts

Because the men who are going to the Intercollegiate matches are members of the varsity class "A" team, they played their matches yesterday afternoon and their matches which are not completed will be played this afternoon. The following men represent the Institute, Saturday, following the American Legion:

Varisty "C" Varsity "D"

J. J. McHugh H. Y. Martin
L. DeGive, Capt. J. H. Wood
E. P. Newman N. R. Harris
D. Johnson J. Rieke
G. J. Murphy P. A. Burchett

Faculty-Graduate Team

J. J. McHugh H. Y. Martin
L. DeGive, Capt. J. H. Wood
E. P. Newman N. R. Harris
D. Johnson J. Rieke
G. J. Murphy P. A. Burchett

Faculty-Graduate Team

J. J. McHugh H. Y. Martin
L. DeGive, Capt. J. H. Wood
E. P. Newman N. R. Harris
D. Johnson J. Rieke
