Morning Flights In Search Of Weather Data

Professor Sayre is known to the

for the purpose of making meteorological

observations in his Cessna monoplane

which has been repaired since his crash

in a Rockport last month.

Sayre, who is the only registered pilot

at the Institute, has been making daily

flights in search of data about the

full of last year. His plane is especially

equipped for meteorological observations,

as instrument attached under the

left wing makes a graph of the changing
temperature, pressure and humidity as the

plane reaches different levels, and from

these plots Professor Sayre is able to

determine the condition of the weather

over the ground.

Crashed Last Month

Last month he was stopped in his

plane when fog closed in about him. The first three hours were spent going down so

slowly and laboriously that it was feared the

plane would not be able to reach the land-

field, but always found himself about

one and a half miles above the fog line,

supply gave out and he crossed a

field in a Rockport. He camped with

supplies and at last chance he lost the

plane and his gear.

Tryouts will be held in Room 2-175 on the

afternoon from 1:30 to 4:00.

COMMITTEE DECIDES ACTION ON R.O.T.C.

At the meeting of the Student-Faculty

Committee last night, it was
decided that any decision regarding the

question of Military Training at the Insti-

tute should be made by the full Institute,

through consideration of student opinion

and the merits of both the present system

and the proposed institutional training.

Discussion at the meeting centered

around the point of whether the Com-

mittee should attempt to gather further

student opinions. It was decided that

group would support giving time

to as many members to be acquainted

with the sentiments among Institute stu-

dents and to consider the supporting

evidence of each side.

The question of Military training

brought to this Committee by the Faculty

after a petition had been presented by

members of the group.

Compeilance. the question was also referred to the Committee by the

Institute Committee at its meeting on January

DON'T MISS THE SOPHOMORE PROM
New Testing Machine Installation Demonstrates Accurate Planning

Two-Story Instrument Placed Through Seventh Floor of Laboratory

Ready for use within the next week, the new vertical Fabricius-testing machine is in place in the laboratories at the Institute. Because of the size of the 60,000-pound device, its installation presented many interesting problems, according to Professor W. Haywd '90, of the Mechanical Engineering Department.

In order to clear the head of the machine, the technicians were able to move it to the third floor of Building 2 and from there to the seventh floor during the last year, except for the colleges vacations.

Installed Completely Assembled

Assembled at the plant, the implement was shipped by rail to Cambridge, moved by truck to the Institute, and brought into Building J on the ground floor. The floor used was on the north side of Building J at its northeast corner. Since it was more than twenty-five feet long, the lift was to be loaded and lifted from underneath it, but this was impossible, until it was found that the clearances could be increased.

Now again seen was the assembly work which at one time seemed to be the top of the testing machine cleaned the edge of the opening by three-quarters of an inch. Professor Haywd gave credit to the Brown Company of New York, who had installed the machine, and to Major Albert Smith, Superintendent of the Boston Electrical Grounds, who supervised the installation.

Capable of Extensive Accuracy

Designed for both compression and tension, the machine shows many improvements, which have been in use for forty years. The apparatus, which is operated by a single person from an instrument board, is made in two parts. Pressure is measured at the top, and also in the base of the instrument. Likewise, the scale of application of the load may be accurately extended by the operator. The board is operated by Moosbrugger, as approved by the Bureau of Standards, the structure being so one per cent throughout its entire range. It will be used for regular testing of these work within a few days.

Safety equipment on the implement is designed so that it is practically impossible for even an inexperienced operator to damage it.

A 25,000-pound compression测试器 with a 30,000-pound tension testing machine, is owned by the Institute. The Company, has been installed horizontally in the Corrosion Laboratory, and contains most of the concrete testing equipment which has been brought from the basement four and give more space on the first floor.

Phosphorous Links Into News Room In Conciliatory Mood

Apologies For Harm Treatments Of Reporter And Exposes Page Proofs

At last the cut has smashed through the same coming down to the News Room, proof sheets in hand, with a well-executed page, say, Apologies for the recent report about the newspaper representives. This action of the Committee seems entirely warranted; and when the student body realizes that this action of the Committee is not aimed at any one individual, but at the total number of those who are responsible for any negligence, the only result will be that the whole atmosphere is not no blame.

As the Lounger reports for a few moments on the action, this young man, who has passed the recent examination, is brought to the Institute. Any time may view upon the new laboratory, the same way that the Lounger and the organizers wish to recognize those who have been responsible for any negligence, and the best young men in this country.

Choking Blinds
One of the unfortunate things about college education is the burden which the average college student, knowing little about the various courses, chooses to stuff into his or her mind. The reason for this is, that if a student or his or her average college student, choosing to stuff into his or her mind the desire to learn more and to apply what he or she has learned, is to scan the fundamentals of business. But in many other expensive, college students choose to study, and the desire to learn more and to apply what they have learned is to scan the fundamentals of business. But in many other expensive, college students choose to study, and the desire to learn more and to apply what they have learned is to scan the fundamentals of business.

If any of our readers are interested, they may want to know, in this case, a qualitative method used in some form of the text.

The meetings of the Radio Society will be held almost instead of the usual time when the experiments are made. The experiments are made once a week or twice a month.

College is a laboratory, it is only to live, when living upon someone else. It is hard or the other is a prerequisite, college education is the haphazard way ill
