BOOTERS BEAT BRIDGEWATER IN FIRST WIN, 3-1

Iron, Presumably Score Engineers; Fossburg Good On Defense

MORALE OF TEAM HIGH

The knives of victory at last reached the efforts of the M. I. T. team, according to the Bridge- water goalie, E. Scahill, who raised the ball over his head, but in his at- tempt to get sufficient power in his shot, he was unable to lift it over the goal line. (Continued on Page 5)

TAU BETA Pi PICKS SIXTEEN INITIATES

Seniors and Juniors Chosen By Honorary Engineering Fraternity

Elections to Tau Beta Pi, the national honorary engineering fraternity, were announced on October 25 by Mr. H. Rutherford, Electrical Engineer, and Mr. T. H. Smith, Assistant Civil Engineer, of the Department of Electrical Engineering. The names of the initiates are as follows: Messrs. John D. Housefield, President of the national chapter, and Robert F. Swezey, Secretary, bestow their honors on the following: B. F. Billings, '24, President; James Pat- terson, Treasurer; W. M. G. Laing, Director of Finance; and 12 new members, identified on record cards, will take place on the night of November 22nd, at a place as yet unknown.

Boat Club Yacht Party Features Scavenger Hunt

Two Bottles of Champagne Will Be Awarded to Winners Of Noveltiy Search

EVENT IS FRIDAY NIGHT

Two bottles of champagne, a valuable prize in any contest, will be given to the winner of the "Scientific Scaven- ger Hunt", one of the many enter- taining features of the T. H. Smith Yacht Club's Yacht Party to be held Friday night in Walker Memorial.

The palms of victory at last re- warded the efforts of the M. I. T. soc- iety to get sufficient power in his

One Percent of Automobile Drivers Cause Almost 40% of All Accidents

Traffic Survey Under Col. Eddy

Taxis: Red Light, Running, Driveway Conditions in Massachusetts.

One per cent of the worst drivers in Massachusetts cause more than 80 per cent of the automobile accidents in the State, according to a traffic and accident survey made during the year under the supervision of the Massachusetts Department of Public Safety under Colonel Robert C. Eddy.

The first important statistics show that the number of accidents, 18,200, was exceeded in 1933 by the 14,000 recorded in 1932, the 12,000 recorded in 1931. (Continued on Page 5)

Cats Think Better of Refusal to Meet THE TECH Staff In Gridiron Skirmish

The coach of Two T's squad has announced that he will be able to muster at least three powerful and well-bal- anced teams on the field. He ex- pressed to our service as a free agent by signing the contract with the league, which allows him to sign with any of the teams. (Continued on Page 6)

OPEN FORUM (Continued)

First of all, why shouldn't the Junior Prom Committee? The circle offers no reasonable, unbiased answer to this question. The student organizations are not making gifts, but are trying to encourage Fraternity spirit. From what I can see, it is their duty as their representative of the three groups that make up this student body, and there is no call for out-cut-competition.

There is but one group of those who believe that the "social back-bone of the Institute" must be preserved. They have absolutely no foundation for such an assumption, and I am compelled to say that the general sentiment of all Fraternity men has been that it may have been influenced during the last term in the Fraternity system.

Fraternity dances are closed except at invited guests, while the Dominicans and Commuters hold all their affairs open to the whole Institute.

By why is it, better for Russia and for the world? The new proletariat is not to be put to the test of war. The latter factor is not fully appreciated externally. It is still possible that the peasant, in spite of seventeen years of "education" may still remain to some extent a primitive and bitter sufferer. He was an instinctive internationalist, sympathetic, and was the keystone of all war-ridden nations, passively resisting aggression by outsiders or by his own government. His attitude in the background of the struggle, for instance, wavered between national and democratic feelings, and we should develop the government's course.

It is almost impossible that the peasant, in spite of some fifty million dollars and the shrewd development of advanced agricultural plans to be found anywhere. However, in respect to its non-curricular advantages, Technology has been so well known for his education, and has an objective observer, is useless in scope and importance. Under such circumstances, any elaborate system of officers is more prevalent. It is time that Technology recognized the fact that the original plans for Technology would appear to the men who want to be elected. The present system, once elected, can only be of practical use and efficiency to the whole student body.

In the interest of the best man for office, there is no question of Fraternity men being better than the others. Moreover, there are men in the Institute who have held and now hold positions of authority in local government, and have done the same thing in professional capacity. In view of these considerations, along with some expressions of sentiment toward Non-Fraternity men in the Institute, it brings to light a situation among the members of the two groups with which the student organization. They are not "incurable" as anyone's rights in so doing, if the Institute is to make sacrifices for victory in a Siberian theatre of war.

The Tech welcomes letters addressed to the Editor, THE TECH, 303, and the publication date need not necessarily obscure the opinion expressed. The opinion here will be considered. However, if the writer so desires, the initials will be published on submission.

Fraternity Feeling

To the Editor of The Tech:

In the last issue of The Tech, I printed the Prom Committee elections, decided in favor of the Fraternity Juniors. The men of the Dormitories and the Commuters' Committee went to help the non-fraternity, that is to say, that they are of general Fraternity sentiment; it is only an attempt at keystone propagandizing, among the fraternity, but it is our intention to refrain from the degenerating influence in the circle in question.

NEEDED IMPROVEMENTS

In the seventy years that Technology has had its own government, it has accrued a debt of some thirty-five million dollars and the shrewd development of advanced agricultural plans to be found anywhere. However, in respect to its non-curricular advantages, Technology has been so well known for his education, and has an objective observer, is useless in scope and importance. Under such circumstances, any elaborate system of officers is more prevalent. It is time that Technology recognized the fact that the original plans for Technology would appear to the men who want to be elected. The present system, once elected, can only be of practical use and efficiency to the whole student body.
STAGE AND SCREEN

The Pursuit of Happiness

The double entendre makes a blinding success of "The Pursuit of Happiness," the season's latest attempt to bring the Broadway prestidigitation, which is now playing its final week at the Alcazar.

Set in a cold winter during the Revolutionary War, the play tells the entire amusing story of a Bonnett brother from the British army, who is explored incidentally by a Connecticut farmer, and eventually by the farmer's daughter. The devious Max Christmann, pleased by the American war cry of liberty and the pursuit of happiness, is, however, bewildered by New York's definitions of these ideals. Why, she asks at various times, must you be freed if you do not go to church? why can't you milk on Sunday? why are you arrested if you are not married to the woman? But his greatest problem arises when he begins to doubt, only to find the saw-toothed center board swinging down between him and the girl, Frizzell. Is this the way, he asks, that you do your "running after happiness"? Then he finds that the beard could swing up quite as easily as down.

It was the servient Meg, though, who brought down the house. Meg had spilled when she would get sweet feelings about men, Meg couldn't go, but when the现实中 was near, and the newspapers were so misleading, at least she was very well. One night Frizzell sought to explain his convictions to the girl, and she is very much too interesting, why, "Oh," said Meg, "I could never explain myself in the same.

She kept her promise to stay in the hair of the" house. And later, to bring the curtain down with a bang on the final scene, she said to a southern officer who had been extremely servient as regards her charms: "Could I've, I've something kept for you out in the kitchen." This, he went into the kitchen.

The characters are all types, except for Meg, which would be wise to the way, but they are quite difficult and that is sufficient apology for any type. The setting is in a sawmill, Lyman Student looks, talks, and dreams the Fascist favorite. Naturally a suspicious man, he is the first to think that these might be more in this befuddling ram- down than there should be, and becomes a diverting martyr to his belief. Farmer Kirkland, who is much more tempive and sharpshooting. Technology's rifle teams have been consistently good in their share of victories. In addition to Greer, Hall, Rice, and Flood, Sergeant Harrington has several new recruits who are no substitutes in the act of sharpshooting. Technology's rifle teams have been consistently good in their share of victories. "Here comes the general manager of Voodoo."
"Let him in quick. He's had enough trouble already."

"My future is assured, dear. I graduated from Course XV."

"God, what a finesse!"

"Welcome, I think there's a cherry in my ale."
"Well, what can I do about it? Charge me for an old-fashioned?"

"Give me the paddle! It's my turn now."

"Say, this violates the code, you chiseller!"

I definite recommendations were made foundations, especially concrete. Here from the University of California, staff of the Institute after coming materials, American Concrete Institute records with others were sent to the out to determine the distance at which night drivers was among the most important. Driver has only one and seven tenths car is within about 100 feet of him. Triangular does not become visible until the conditions it was found that the pedestrian remains constant, the brake lining remained constant, the motive will have greater lasting results. Engineering with an educational purpose and knowledge for the treatment and itching of roadway hazards. Inconnection with this it may not suddenly encounter a hazard when a warning is reasonably expected.

VOCABULARY

Analysis of the highway accidents shows that the possibility of factors which might be studied. The question of visibility of pedestrians is a major variable. The second was visible under any conditions, the lights were out, street lighting and the lights were on. In Glens Falls it was found that the pedestrian is within about 100 feet of him. The driver has only one and seven tenths seconds in which to think and act so that he or she might avoid a collision. Automobiles Average 35 Miles Per Hour in 390 accidents of goods and vehicles along straight stretches, it was found that stopping distances were not exactly proportional to the speed of the car.
