

**EDIToRIAL**

Our statements, printed a week ago have evidently been continued to be disproved in a great many cases, where they were most useful.

The benefits that every student receives from the T.C.A. activities are enormous, and the greater the number of students that are assured of these benefits, the more they will be acknowledged.

There is no reason why students should withhold their support because of one small difference of opinion. There are many cases where the opinions of the majority are not followed because the minority have not been heard. The benefits that every student receives from the T.C.A. activities are enormous, and the greater the number of students that are assured of these benefits, the more they will be acknowledged.

Results of the poll tabulated in this issue show the present student attitude towards the "Tech-in-Turkey" Drive Methods. It is a consensus of student opinion that the "Tech-in-Turkey" Drive Methods are the right way to go.

The T.C.A. Drive is to be continued Tuesday of next week, and it is the duty of the student body to contribute to this worthy cause. It is our fortune that our discussion has appeared to have turned some of the students who were not aware that they have done had we not intervened, and that it has crystallized opinion of two main issues and we sincerely hope that these will have been held out with some success.

It is often easy enough to find reasons for not doing things, but all ideas have a validity. It is for expressing them and for seeing that they are carried out to their logical conclusion. The "Tech-in-Turkey" Drive is not only a financial benefit to the student body, but it is an educational one as well. It teaches us how to organize, how to budget, and how to sell.

In view of the above, we feel that the "Tech-in-Turkey" Drive is a success, and we hope that the students of the Class of 1944 will join in and help to carry it to a successful conclusion.

**Bids For Field House Due Soon; Work Now Begun on New Track**

With bids on the new field house to be submitted in the near future, and with the track in the process of being laid, the planning for the campus's newest and finest structure continues.

The plans for the new facility include a 200-yard straightaway, with an oval for field meets. The field house will be equipped with a number of facilities for the convenience of the students and the visiting teams.

The new track will be used for a variety of activities, including track meets, field meets, and intramural sports.

**Prof. Allis To Lead Climb By M.I.T. Outing Club**

Outing Club members will climb the Black and White Cliffs in Maine on Sunday, November 12. All members have acquired enough skills, and will be made to work together.

The climb will be a strenuous one, requiring careful planning and preparation.

**C.P.S. Refused Program Money**

Junior Treasury Board

Allowed To Attend

Meetings

At the shortest meeting of the year, the Faculty Board voted to deny the Finance Committee request for a grant of $200.00 for the purpose of paying for the cost of the program at the annual Banquet. The Finance Committee had requested the money in order to pay for the cost of the program at the annual Banquet.

The motion was made by Stuart Paige, president of the Junior Treasury Board, and seconded by Professor W. A. R. Smith.

The motion was carried by a vote of 11 to 0, with the following students being present: Michael L. Herasimchuk, Richard S. Leghorn, Richard C. Casselman, Gus M. Griffin, and Walter H. Farrell.

THE GLORY OF WAR

In the past, THE TECH has attacked compulsory Military Science as many students were forced to drill when they did not want to. That situation has been satisfactorily remedied.

There is no more ghastly or dirty job than the one that the soldier has to perform. However, modern measurements only come to the right direction.

Not all soldiers enlist because of the honor and glory they imagine belongs to military life, culture, and ideals from his country, but it has a huge effect in changing their attitude. The necessity for having some permanent belief is supported by research which postulates that the men who join, to train long, and to give up their civil rights.

THE SCIENCE IN BRIEF

By ARTHUR S. YOYK, '28

Scientists see a story behind the story of Germany's recent annexation of the Sudeten territory of Czecho-Slovakia. Although Hitler has gained control of a number of desirable munitions works by the annexation, he has assumed a new problem of food supply, because the Sudeten area has not been producing nearly enough food for its own consumption and has been depending on the Sudetenland which will hereafter be an international boundary. Furthermore, there are textile plants in Sudetenland which will have to import cotton and wool if they are to continue producing real, not artificial, fibres.

As the result of observations during the World War, physicians have been able to devise a new method, employing "surgical maggots," for curing various types of chronic infections which can be made to yield to no other methods. Serving in 1917 in France, Dr. William S. Baer observed that wounded soldiers who had lain on the battlefield for several days often had wounds filled with maggots but were not infected and that, as soon as the maggots were removed, a speedy recovery resulted. Subsequent developments of the idea by Baer and others in the United States has resulted in a method for introducing sterile maggots intentionally in certain types of "surtarptive infection," and especially in cases of bone infection. The types of maggots used to eat only the dead tissue, and when the infected part has been entirely eaten away, and can finally be washed away with a salt solution.

Laboratory measurements have proved that bread made from a mixture of cereals is more nutritious than that made from a single cereal. Now it is known that the additional benefit is linked with what is known as the "protein factor," because mixed cereal protein has an increased nutritive value. However, modern measurements only confirm the beliefs of many of the farmers of North America who millions of people have been on a diet of 95 per cent vegetable, the crude diet of centuries.

Archaeologists believe that the Babylonians will outlast us in history because they wrote the story of their civilization on durable clay tablets whereas we are content to leave our records on flimsy paper.

Referee's Decision Means Crimson Victory In Overtime Thriller

At Harvard Stadium yesterday, the college football season was blackened by a fierce sleetstorm, but the game was not. The Harvard team, under the leadership of Captain John Alexander, led by技术水平 and executing a well-coordinated defense, defeated the visiting Tech team, 13-7, in what many sports analysts consider one of the most exciting games of the year.

Tech, led by its new coach, John Witherspoon, had a strong season, but they couldn't overcome the Harvard Crimson's defensive strategy. Harvard, on the other hand, had a solid performance, with key players like John Halstead and school record holder William E. Wood leading the way.

The game was marked by a series of dramatic plays and intense competition, with both teams displaying their best efforts. Harvard's victory was a testament to their teamwork and determination, as they pulled off a miraculous comeback in the last quarter to secure the win.

The game was attended by a large crowd, and spectators were treated to an unforgettable performance. This victory solidifies Harvard's position as a preeminent college football team, and sets the stage for an exciting season to come.
