Students and Faculty of Technology Are Consistent Air Travelers

The students and faculty of Technology are the most consistent air travelers of all the colleges in the country, according to W. A. Patterson, president of the United Air Lines. Within the last three years over one million miles at a total cost of $1,000,000 have been flown by Institute faculty.

Mr. Patterson announced Technology's supremacy in the field of air travel at the 38th annual New England College Radio Conclave last month.

"21 Fly As Group"

To save money a group of 21 male students last night headed for Boston and chartered a special plane, a United Mainliner, for their trip to Chicago for Christmas. This was the first of its kind ever to use a charter plane for vacations travel in this country.

"The Chicago-bound group, however, was limited to the equipment of its air travel. Since then many Tech men have improved tremendously and have saved money by traveling in this country.

STUDENTS and CHARTERED PLANE

Crested Butte has been the favorite birthday trip of many students who have traveled here since the college radio station began on the air. The station's success is due in part to its location in the Colorado Rockies, where the mountainous terrain is perfect for flying.

T.C.A. Reopens Ticket Service For Xmas Travel

Ticket reservations may be obtained from Office starting today.

In order to aid students seekingXmas travel, representatives from different railroads will be at the ticket office of the T.C.A. (11:30 to 11:35 P.M. at 11:45, 12:15 P.M. at 1:15 P.M.) daily until the beginning of vacation.

The railroad representatives will be in the ticket office from 11:00 to 11:30 P.M. and from 1:00 to 2:00 P.M.

A large number of detail lines are available. An open house of business will be expected this year. To aid students who wish to drive home for the holidays, the A.T.C.A. is sponsoring a passenger-driver service. Also, with the use of the T.C.A. office, they will be in the eighth or a seven-day service that the Student Travel Association can offer.

A NEW VIEWPOINT

It is to be hoped that the hundreds who will file into 10-11 this Thursday afternoon will not be disappointed with the enthusiasm expected for which a small boy opens a box of fireworks. Men are prone to blow- ing their own horn on little pastimes, but the current Hopkins' address is not intended as a provocation, and should not be regarded by any thinking person as such.

Mr. Brooker is a mode of political thought of which Institute students, among others, have heard an increasingly large amount of, but of which they have little actual knowledge.

This is our chance to learn about the theory and practice of Communism, and the Communist viewpoint on world affairs, from the man who is the acknowledged leader in this country on that subject. At the same time we will hear this viewpoint contrasted with an opposing viewpoint as expressed by a well-recognized representative from the Harvard faculty.

It is actually a rare opportunity for all of us to learn a little about an ideology which is commanding the world's attention more and more in recent weeks.

It is not a rare opportunity for a free-all, for most of us are more interested in the truth of things than taking it as such.

A LITTLE SELF SUPPORT

Rumor hath it that the T.C.A. Drive this year was not quite a big hit. This is necessarily going to require some pinching and belt-tightening on the part of those organizations which might be affected.

The strain of relying on the rather uncertain charity of the students might be alleviated if they would, at least for a few days, cut a few of the non-social service departments on a self-supporting basis. For instance, much of the large amount of equipment casually leased by Freshman Camp could be removed if the price were jackinned up a dollar or so. In most cases, if a freshman camp were to be opened and operated by him he pays seven or eight dollars for the privilege, but it would matter a great deal to the T.C.A.

The ticket service, also, costs the T.C.A. a good healthy bunk of dough each year. It could be made self-supporting if the price were raised to a small service charge on the price of each ticket. By using this department the student saving enough in time, energy, and travel- ing expenses that he would not object to such a charge. Likewise, by shipping a small fee onto parties using the Tech Cabin, the cabin might begin to return a small amount on its cost and upkeep. Consideration of the average party using the cabin, it would take only an unnoticeable fee to put an appreciable dent into the average cost of the Tech Cabin.

If these proposals were to be put into effect, the T.C.A. would be compelled to cut such a large chunk of its budget. They, no doubt, pocketbook, and thus would have a far better chance of obtaining its quota. Probably, we need not question their contributions to the organization, but, from the way they seem to walk under the impression that they are helping a charitable organization.

It is to be hoped that, with the elimination of non-charitable departments from its drive budget, the T.C.A. would largely revert to the aims implied in its name—The Technical Association. The money which it received from the students would go to charity alone, as is the intention of the donors.

DOCTOR KNOWS BEST

Institute students are growing taller and bigger, according to statistics released by the Medical Department. However, the strain of science and engineering is also becoming more evident for the Homberg Memorial Infirmary has been left but 21.2% more bed patients during the past four months period which ended on October 31st than in the corresponding period in 1938.

Anthropologists have been telling us for many years that the human body, together with our civilization which fosters it, is expanding. Analysis of measurements made on college students in recent years show that little by little, centimeter by centimeter, they are beginning to tower over their forefathers.

Here at Technology it is not necessary to wait a generation to observe this phenomenon. For statistics show that the Homberg Freshman is five feet, ten inches tall, and gains at Technology's wonders from the average of two inches higher than his Sophomore rival. In the Field Day glove fight, the younger men were the average, substantial beef on their side, for on the first hundred and forty-six points they outweigh the second year nearly exactly 13.14 grams.

One conclusion that happy-go-lucky students should draw from these statistics is that there is, besides the strain that the harder the heart is to the students, for during the months of July, August, September, and October, nausea batters and increases every year, and that only 39 men, they are beholding perhaps to which are Homberg's pride. It should be unnecessary to emphasize to men imbued with a technical portion of the laissez faire medicine is the most effective offense against incapacitating disease. Tech has a splendid Medical Department; don't be afraid to use it.

IN THE MAIL

Killer, The Tech.

It is to be hoped that Mr. Browder's recognition on Thursday will be a precedent to the suggestion that Mr. Browder's recent editorial so gleefully implied a wish for. It is too bad that when the meeting is discussed on the same day, it is no less necessary to remember his advice, but untenable trends that pervade the atmosphere of the day before a dime is required. The ritual of the exchanges of a dime is not entirely out of place at a meeting of the Student Press Association. As he believes, Mr. Browder is neither sufficiently discerning nor sufficiently одним to object to freely expressing any avenues of thought, he is in his question, it might be well to take along a grain of salt with the effects of the T.C.A. would not be compelled to cut to the cost of the T.C.A. for rent.

Mr. Browder is no menace to the peace of America, but besides having the qualifications for a particular form of government it might be well for it, is expanding.
