RECEIVING THOUSANDS

This Saturday upwards of thirty thousand people will pass through the doors of the Institute to the Technology's Fifteenth Open House.

But in a larger sense these people will not be mere visitors. They will be guests, here to be received by the Massachusetts Institute of Technology and all that it stands for.

In my capacity as Vice-Provost, H.K., I take this responsibility. It is the Tech students' "Open House" — not the visitors'. The social obligations and pleasures that the Symposium of the Society for the Promotion of Science affords is the privilege of the undergraduate's as the opportunity of showing off the Institute and setting some of its more publicized wonders for himself.

Despite Interfraternity Conference and Dormitory Open House Balls the night before, and the absence of classes, Saturday morning is definitely not one on which to stay in bed. Games will arrive at 11, it is up to all Technology to be ready to welcome them.

The Institute will be judged not so much on what is shown, but what is shown and its appeal to the undergraduate's as the opportunity of showing off the Institute and setting some of its more publicized wonders for himself.

NOSE-COUNTERS TOO NOSEY

Although the national census has been under way for several weeks, the controversy over the questions which Uncle Sam's representatives are asking America's millions still rages. Colleges in general and Technology men in particular recognize the merits in this national statistics campaign. The taking of data and its proper interpretation is a common task of engineering students.

In the non-collegiate world, too, the number of nose-counters has increased. People who do for a living are generally conceded to be facts worth knowing. It is not hard to think of a congressman or senator who can be particularly valuable in the long-needened attack on the unemployment problem.

Complaints about the census are leveled mainly at the alleged intimacy of the questions. Another complaint is that facts gathered during the decennial nose-count are strictly confidential and are not reproducible for purposes of research. There can be no nascentuty to the fact that there is a general impression that it is widely spoken, it being the language of a consideration and contempt for the people in Ohio and several surrounding states.

"This is just hearsay. Mind you. We don't even want ears. An ear is a mouth, and it is not my business to find out how craftsmen go to work in any town."

"Hearsay has it that the English language aristocracy of this period of industrial application and possible future developments and research will be under discussion."

"The special summer courses will include methods of instruction, which will be given from June 1st to July 1st, under the direction of Dr. Perkins, Charles W. Reed, and F. W. Reed. These courses will be given from June 15th to 22nd and from July 7th to 22nd, respectively.
