Compton Urges Cambridge Site for Army Lab
Ten Million Dollar Lab
To Investigate Living, Food Problems of QM
In the face of local indifference to the idea, Dr. Karl T. Compton has declared that "the best place in the country to build a ten million dollar Army Quartermaster Corps Research Laboratory would be in Cambridge and Boston." He continues, "Q.M. are very keen about having a lab in Cambridge, or any other part of the country would be better suited for the purpose, and M.I.T. facilities could be utilized.

According to Dr. James R. Kil- lian, President of the Insti-
tute, there has been considerable progress in the last two years of establish-
ing the nucleus for the Quartermaster Corps which would serve as a people's army, living healthily, clothed and fooded."

New TCA Officers Installed Saturday During Luncheon
Retiring Officers Report Losses, New Services;
Fred Bailey Is Honored

The T.C.A. took place at its annual luncheon, and has its name in the Dining Room of the Graduate Club.

The men selected for the under-
graduate cabi were Harold R. Hiebsch, "48, Junior Vice-President; Fred Bailey, "48, Subsecretary; Robert F. Rieck, "48, Secretary; William H. Andrews, "48, Junior Treasurer; and Murray Clum- ber, "49, Treasurer. Rumor about the cabi has been heard on the campus for some time."

Fred Bailey was honored for his outstanding work with the or-
er system. The reports from the se-
"men (Continued on Page 4)
The Tech

The Tech Versus Offstage: 2 Rounds For Farmer Russ

A couple of issues back we printed a picture of Farmer Russ Offstage. Latin quarter dodge jockey on WALT, as of the action scene at the club radio worthy overenthusiastic writer called "The punching of the pro"

If we thought that was the end of it, we were very much mistaken. As you may well know, we were informed that this may be the last time we would see the real Russ, because his picture was in the M.I.T. T. Navy newspaper; therefore he would not send him a copy. For those nice M.I.T. T. boys he has a number... "Civilization"

Well, we received and Russ his picture with a note to the effect, that we did not think "Civilization" too appropriate as Tech men convey to pertinacious rumors were quite real human and evident.
P.B. wouldn't he play Stardust sometimes?

The other night is happened. Offstage announced that he had prepared a party for the members of the Tech with his pictures exchanged. For that he was going to dedicate that night to a few... "I had to be there"

Labor Is Problem

In Building Trade

"Labor in the Building Industry" was the theme of the next luncheon lecture of the Department of Economic History by Mr. Joseph N. Bostan of the Associated Board of Engineers of the Emerson Room recently. Mr. Scanlon, former Research Director of the Steel Workers of America, had wide experience with the building trade and was able to discuss the building trade as an industry in the capacity of a member of the Building Industry Advisory Council. He stated that although most industries have only accepted unionism in recent times, the building trade has always had their craft unions.

Mr. Scanlon went on to explain the peculiar status of the building trade as a result of history and the number of factors. There has never been a "big" man in building; it is an industry of small contractors, most of whom build only one house a year. The average building firm building works only 100 days a year. The building trade is a national industry of small contractors with a national attitude of working parties and with a national attitude of working parties.

The building trade is the industry and the building industry is the trade. This is the difference between what has been called the building trade, which has wide experience with the building trade as an industry in the capacity of a member of the Building Industry Advisory Council. He stated that although most industries has only accepted unionism in recent times, the building trade has always had their craft unions.

Mr. Scanlon pointed out the significance of this fact during his program that he had heard his program from the Steel Workers of America. There had been much emphasis on the building trade and its relationship to the building industry... Tennis Team Has Indoor Workouts

Six Racquetmen Return From Previous Season

Although its first match is not scheduled until the end of next month, the Tech tennis team is putting in quality shape for the spring season. For the first time in history of M.I.T., the team is able to practice indoors—using the Armory—so that they will be able to get some early conditioning.

The schedule opens with a home match with Bates on April 22, followed by the Spring season. For the first month, the Tech tennis team is expecting to be a contender for the N.A.I.T.A. championship at New York last month.

Compton (continued from Page 1) considering the question. He stated that the proposed Cambridge location would be ideal in its proximity to M.I.T., Harvard University, Harvard Medical School, and Boston University. "At M.I.T., for example," he continues, "We are interested in the whole range of engineering and science and have especially strong groups in the research fields which would predominate in the Quarter- master establishment. I can assure you that M.I.T. will collaborate with the program of the laboratory in every possible way, and that we welcome it as a neighbor."

The laboratory is to be called the "Institute of Man Research Laboratory" according to the Army Quartermaster Corps. An estimated ten million dollars will be spent on its construction, and when completed, it will employ approximately 100 persons in the vicinity.
