Dormitory Board Votes Permanent Open House

Open house for women will no longer be limited to specific occasions in the permanent dormitories, but will be from 3:00 p.m. until 12:30 a.m. the Christmas enjoyment, and from 1:00 p.m. until 9:30 p.m. on Sunday evening, according to the decision of the Dormitory Board.

Permanent open house will be on a trial period until the Christmas vacation, to determine a permanent policy that may be decided. Hereafter open house has only been permitted when special affairs, such as dances, took place on campus. Approval by the Dormitory Board was necessary for each individual case.

Last year a group of students "protested" that most applied for and were given permission to have open house Friday and Saturday days in the senior houses, but because of frequent abuse of this privilege it was discontinued during the spring term, said Professor L. P. Hamilton, chairman of the Dormitory Board. At one time, when the undergraduate dormitory rooms were open, they were refused because of the "construction of the buildings."

Professor Hamilton pointed out that it was only a short time ago that the Institute was off-limits to women, and that took away a privilege they were refused because of the Institute was off-limits. She reminded that the Burton Room and Crafts Lounge are open to all women. Should these rooms be made open to women visitors any day of the week until midnight.

Flying Club Gets Another Cessna For Night Flying

Open Ground School To Show Action Films

"Bedford Tower, this is Cessna 384U requesting clearance for take off," barked through the control tower's loud speaker, as the Tech Flying Club's new Cessna 140 passed before the runway. Xavier, Thomas Crotty ('50), President of the club and Leonard O. Nipp, '39, tested the ship and closed the deal. It is provided with a calibrated 90,000 operations marker, was taken as the ship has been not a great deal. Now, back through the telephone, comes, "Cessna cleared into position and hold." And a moment later "Cessna 384U clear for take off."" After using one of the most popular manners of a laboratory for heat which was decided that the Institute was off-limits because the construction of the building's third plane.

Two Make First Solo

In the forenoon we watched William H. Enderly, '50, and John H. Dawson, '50, solo for the first time. As most of you have heard, by the way, the plane has never been free for that first flight. The first solo藏着, the other members of the flying club, all of whom have been. They are open to women visitors any day of the week until midnight.

Mon-Shoos'

Demand Obeyed

J. P. Committee Plans Additional Ticket Sale

The J. P. Committee has decided to sell additional tickets for a day, "shmoo" party because of the large demand for tickets. This marks the first time that such a change has been followed by the Committee. Ray Jenkins, in charge of ticket sales, announced that tickets for this party will go on sale Wednesday, November 19, at 8:30 a.m. per person.

Options for the Prom will be determined from Tuesday, November 19, to Friday, November 19. Table reservations will be made at the same time according to the procedures outlined in the mimeographed sheet handed to all purchasers of options. The following are the table accommodations available: 16 tables in the big room, seating 7 couples each; 24 tables on the floor room, seating 6 couples each; 5 doubles in the floor room seating 1 couple. Options may be made on a first come, first served basis.

A slight readjustment of the J. P. Committee was necessitated when Jim Baker resigned from the offices of Publicity Chairman and Editor-in-Chief of the J. P. magazine, his duties were assumed by Harris B. Stone. The other members of the Committee are Robert C. and Oscar Miller, Chairman; Tom Eggert, Alan Vort and Hasso Erickson.

Nomination Forms Will Be Due Nov. 10

The full elections for the Senior Week Committees for the Class of 1949 (24th), the Senior Ring Committee, and the Junior Prom Committee for the Class of 1949 (23rd) men, will be held Tuesday, November 19.

All nomination forms must be made on a first come, first served basis.

Steel Stretched, Ruptured By Prof. In Basement Lab

Professors have often been described as a humorless lot. This season, however, two educators have shown the world another side of their characters. Mr. Robert Beattie, the history professor, has found the strain of teaching too much for his constitution. Mr. Fred Williams, the physics professor, has stretched himself to the point of being critically ill. The two men, who have been the focus of a great deal of attention recently, have been the subject of much speculation among their students. The cause of this unusual behavior is believed to be the strain of teaching too much.

What's A Creep?

Introductions: Twenty years ago, creep research was being conducted by Professors Gregor and N. Norton. The Creepers Department, as it was called, has employed an established Creep Lab in Room 247 in the basement of the Physical Science Building. The lab is the site of a new experiment that aims to discovery the nature of creep.

Rivalry Lives Only In The Frosh-Oeph Rivalry

In past years, the frosh-oeph rivalry has been a major attraction on campus. The two groups have been known to compete in various events, including tug-of-war and basketball games. This year, however, the rivalry has been greatly diminished due to the decrease in the number of commuters. In addition, the two groups are holding separate meetings to spur their class spirit.

In conclusion, the futuristic vision of a utopian society in which the freshmen and sophomores classes are the dominant groups on campus is not only unrealistic, but also unlikely to occur. The current state of affairs is more likely to be a result of the decreasing number of commuters and the increasing emphasis on individualism.
PLACEMENT INFORMATION
You may sign for interviews in Room 7-111 with the following companies. Be sure that your folders are in the Placement Bureau prior to your interviews.

Kaiser Service, Oakland, Calif., Nov. 6 & 9; II.
General Electric Co., Schenectady, N. Y., Nov. 6; II, XVI, V.

Acros, Project, Oak Ridge, Tenn., Nov. 6; I, XVI, II.

Linde Air Products Company, Tonawanda, N. Y., Nov. 6, II, XVI, V.

ilibro Corona of Americas, Camden, N. J., Nov. 9 & 10; II, V.

R. J. du Pont De Nemours & Co., Wilmington, Del., Nov. 10 & 17; II, V.

CARS FIRE HAZARD
Near Grad House
The M.T.I. Safety Council has an- nounced that a serious hazard has been created by double and triple parking on Amherst Street at the rear of the Grad House. The Council has heard that officers have stated that, in case of fire, it would be difficult or impossible to get fire apparatus into effective position.

Check-up shows that much of this parking is done by students who have not been given sufficient time to get to class and thus find it inconvenient to drive. The police warn that this practice is unsafe and may endanger the safety of others.

According to the Metropolitan Police Department, parking in front of the Grad House Gate and along East St. is allowed, in front of the Graduate House Gate to Medical Drive. This department depends upon this space only in case of fire, in which the police warn that this practice is unsafe and may endanger the safety of others.

The metropolitan police are therefore calling for a change of this parking rule, which is the only one on campus.

While the manager of the Cosmopolitan Hotel on Amherst Street double parks daily with impunity, cars of Senior House residents have been tagged by the Cambridge Police for parking between 2:00 and 4:00 p.m. Police say students should give businesses a break.

12 M.E.V. Generator Will Use High Pressure Insulating Gas

Construction of the twelve million electron volt generator used in the swimming pool is well under way, with the baikav Instrument Company driving piles and laying insulation to a depth of 10 feet. The generator will be built into a steel tank which will insulate the terminal by enclosing it in an envelope of nitrogen or carbon dioxide under 27 atmospheres of pressure. The gas will presumably be released from the pressure by increasing the flow of the superior insulating gases such as aron or fluorine, and enabling voltages to be built up which will be powerful enough for the problems inevitably generated in space lighting.

Earl's Summer Operation
According to Dr. John G. Trum, designer of the machine, it is expected that voltages will be produced by early summer, and the machine will be able to begin its operation after a few months. The heavier metal portions of the gen- erator are being made at the Navy Yard, the lighter metal at the Naval Air Station.

Research on the atomic number, including biological studies of the medical properties of radiation, will be done with the generator, which will work on parallel lines with the old Van de Graaff on Vassar street. The highest voltages in the world will be available with the new electrostatic generator, up to four times as high as have ever been produced with the old generator. The generator, in particular, is probably the most important in that this particular type can be used to accelerate positive ions of masses one and two to extremely high velocities, where they can be magnetically separated out for different energy levels and used to bombard atomic nuclei.

Flying Club
(Continued from Page 1)

The first stage has not yet been even in a small plane before, I believe. Brightly colored, it was described by the manager of the club as "another plane."

Examinations.

M.I.T. Sailors Win From 13
Only Princeton Trio

On Sunday afternoon, Tec's sailors were victorious in the Brown Cup challenge race, a continuation of a tradition of boat races between Varsity and Yale. This year's race was held near the bridge at the end of the broadwalk at the SEAS. The boats raced for almost an hour andPEAT, with the Tec boats winning. The Brown Cup is awarded to the winner of the race in memory of Thomas A. Brown, class of 1924, who had been a M.I.T. sailor of prominence in the years before the war.

**AWAY FROM THE GRIND**

BY JOHN R. STYER

Every week we hear at The Tech office, we have to clear away some of the toxic of the usual stuff. In the last race, Greenwald answered for Brown with a little more than a minute which was only a few seconds behind the track. Despite this, he was still very high. Finally he cruised the line in a sec-

**EXAMPLE CASE**

The University of Massachusetts has already surpassed its early-day Day, or at least the Tig-Yow-Way load of it. The B. M. T. Tig-Yow-Way is a little different from Tech's. It seems that there's a pole about sixty yards wide that the leading team must weave through, and then lead on by the savagery of his own. Underhandedly entered the contest this year, however, when the freshmen secured their own end of the rope to a nearby telephone pole. Confident of their strength, the truth lost interest in the whole affair and failed to notice the sopho-

Veras Captains Soccer 2 Years
A.A. Head Received All-America Mention

By Dave Uline
Jim Veras, outstanding Tech athletic. Veras is now entering his second year as captain of the varsity soccer team and is president of the M.I.T. Athletic Association. For his exceptional soccer playing last year, Jim received honorable mention on the All-America soccer team.

Although born in Brooklyn, the 1981 soccer captain has been here but a few years of the tree. After playing three years of soccer and putting the shot at the High School in New York, Jim entered Tech in June, 1943, and finished one term before entering the Army.

While in the Philippines, Jim played soccer with the Manila Gl.I. Jim reentered the Institute in June, 1946, and started playing soccer with the Manila Gl.I again. The team of Mr. Geiger and Anopheles, to become acquainted with the Anopheles mosquito, and, likening the tactics, they nicknamed him 'Anopheles.'

Veras has been an All-America soccer player and is now entering his second year as captain of the varsity soccer team. He was elected soccer captain and is president of the Athletic Association this year. He tried out for the United States Olympic soccer team last year and was selected to the semi-final team, in which he placed 6-4-6, and the game last Saturday with M.I.T. Union Preparatory School went on for a 14-4 tie. The game against Westchester Institute, which was scheduled for an 11-4 tie, was cancelled.

Over in the upcoming spring the freshman team will represent the A.A. in the annual soccer tournament. The team will consist of three singles positions, and they will be followed by Glisch, Geisser, Coll, and Speigel. All of these men, with the exception of the last, are leading the Freshman Tennis Tournament. They will be backed up by Bucker, Bigby, Crocker and Olney, last year's team, plus Eilert and Skaff.

Mystery

There is an air of mystery about this field. The Freshman team in that no one outside of the players themselves or the coaches has seen the team line up. The squad has had two practices, one with the Northeastern Freshmen, and the other last Saturday with M.I.T. Union Preparatory School, which went on for a 14-4 tie. The game against Westchester Institute, which was scheduled earlier this week, was cancelled because a sizable group of friends were having a party at the time.

The freshmen's two stars, Bucker and Bigby, will take part in the first two singles positions, and they will be followed by Glisch, Geisser, Coll, and Speigel. All of these men, with the exception of the last, are leading the Freshman Tennis Tournament. They will be backed up by Bucker, Bigby, Crocker and Olney, last year's team, plus Eilert and Skaff.

For the Freshman team, Bucker and Bigby are the stars, and the only men missing from last year's squad are Jerry Austin and Bucker, while playing for the soccer team. The freshmen's two stars, Bucker and Bigby, will take part in the first two singles positions, and they will be followed by Glisch, Geisser, Coll, and Speigel. All of these men, with the exception of the last, are leading the Freshman Tennis Tournament. They will be backed up by Bucker, Bigby, Crocker and Olney, last year's team, plus Eilert and Skaff.

Late Dorm Returns And Pledges May Meet Goal

The increases in operating costs of materials has required a combined goal of $6750 last year. The goal of TCA and W&SSW totals $8100 this year compared with $800 shy of its $5400 goal. The campaign totals as of Wednesday noon, according to Donald Halliburton, will now be on duty during the week to help alleviate the often crowded conditions at the Coop.

With only six hours to go in its fund drive, the TCA is reportedly $650 shy of its $5400 goal. The campaign has come through to pledge a sum pay-able anytime before January.

There is still time for dorm residents and commuters to add to the total. According to General Secretary Wallace Ross, the TCA prefers cash contributions until their VA checks may have been withholding their contributions.

Fashions

The Harvard Cooperative Society has announced that, beginning in the near future, the Coop will no longer open on Saturday mornings. The volume of business has not been sufficient to justify keeping it open, but the clerks who have worked on Saturday will may be on duty during the week to help alleviate the often crowded conditions at the Coop.

The exchange recently added to the Cambridge telephone system will not be for the convenience of the students residing in the dormitories. The telephone company admitted that the exchange, University, is somewhat misleading. According to the Telephone Company, a University exchange existed some time ago, but it was discontinued by exchanges like Eliot and Town-bridge. The overcrowding of the present facilities has made the old University exchange essential for efficient operation of the telephone network of Cambridge.
