Acting Dean Farnsworth Employs Baker's Policies

by ED LIORAD

At last week’s student convocation, Dr. Kilman announced the formation of a committee to study the advisability of having Baker as dean. Acting Dean of Students, David H. Weisbren, had asked the committee advisor to Dean Baker during the time served in office.

Dean Baker, who is background in psychological medicine, actual participation in the student body, and driven by a deep calling at the academic level. He sees the importance of the faculty and the need for better educational principles, and in the context of educational principles, he feels that the faculty should be engaged in a research project. This year he has been engaged in a research project that involves the study of educational principles. He feels that such a project is needed to improve the educational environment.

Dr. Farnsworth is at present giving serious consideration to Dr. Baker’s advice. He feels that improving the educational environment is a key issue, and he is considering how best to proceed with the task.

Dr. Farnsworth pointed out that while his policy will closely resemble that of the old school, there will be some changes. He believes that the old school has been effective, but he also recognizes the need for improvements. He feels that the new policy will be more effective in meeting the needs of the students.

FREEDOM CRUSADE COMES TO INSTITUTE

Crusade for Freedom, started by a group of students who signed a radio address on Labor Day, is spreading to various dormitories and social clubs throughout the campus. The Crusade is a grassroots movement to oppose Communist. College and university students are signing up in droves, giving hope to those behind the Iron Curtain for eventual return of their freedoms.

You too, can sign up! Just ask around and make sure everyone knows about this important cause.

Dr. Farnsworth, head of the Medical Department and recently appointed to the board of the Massachusetts General Hospital, views student life as an exciting article.

CRUSADE FOR FREEDOM

The Headquarters of the Department of English and History, Room 104, will accept applications until October 1. The charge for the course is ten dollars, payable in the Cashier’s Office, Room 20.

FALL ELECTION OF OFFICERS HELD BY TWO MAJOR STUDENT GROUPS

THE HUMANITIES ARGUMENT

Ever since engineering education moved out of the vocational schools and up to the college level there has been a continuous noise caused by the argument about how much time should be devoted to the humanities. Since the release of the recommendations of the Commission on the Humanities, which stresses the importance of the humanities in all undergraduate courses and the establishment of a separate School of Humanities, the discussion has taken on new impetus. The classic themes of the discussion are familiar to everyone. As a technologist, the engineer should be aware of the impact of technology on all aspects of human endeavor; he should be made conscious of his responsibilities as a citizen and as an implementor of technological advances. On the other hand, four years is barely enough time to train a man in a technical field. A technical education is a foundation for turning out well trained men, and this standing might suffer if technical training were to be decreased to allow more time for general education.

One very important point is often missed in this matter when it is with the premise that an engineering school functions solely as an incubator of embryo engineers. It is quite true, that the great majority of engineering jobs can be handled well enough with great overall world-view, and that one can become a good engineer with no background of general education, but this is the concept of the engineer as the servant of the policy-maker. The Institute would like to see more of its students become politicians, and for whom the social calendar. Since they know what they want to do, and upon graduating from the school they are off to attend Yale, Harvard, or Princeton. This is the typical scene. An appreciable number of alumni will be determined by the sequence of events, and the Institute has been operating at 50% efficiency; it was a good standard for the school. But in the current program of the character and the student's talents. By contrast, the Institute has been operating at 50% efficiency; it was a good standard for the student's talents.

There is another fact, not too widely known, which has a place in any discussion of general education or the establishment of a school of humanities here. On several occasions we have asked Dr. Pauli, the President of the Institute, to state that on the staff of the Institute there are 50% of the students graduating in the fields which they studied as undergraduates; the rest are doing everything under the sun. And they have pointed out that the career of the student who does not make the grade, for among them are some of Technology's most illustrious alumni. It is very well to point out that Technicians have done well in fields other than engineering, but why not? The student has the problem of being a successful engineer, not without facing the sticking question: did the Institute really do right by these men? Did their schooling here help them to success in their chosen fields, or would they have been much better prepared by another kind of education? To conclude that another educational method would have been better for them is to confess that the Institute has been operating at 50% efficiency; and to say that a good stiff training in some technical field has prepared them for success, is to confess that the Institute has been operating at 50% efficiency; it was a good standard for the student's talents. But in the current program of the character and the student's talents.

SOPH FOOTBALLERS MEET

NORTHEASTERN TOMORROW

53ers To Battle Strong Huskies On Briggs Field

Footballers will meet their first opposition tomorrow at 2:30 p.m. when they tangle with the Huskies of Northeastern on Briggs Field. The prospect of melee reserves will haunt the small squad of Engineers, but not the large squad of Huskies, by the mighty field won in battle.

Coach Marc Pearlman will have virtually the same squad he had last year, which last to the 53ers a losing 21-0-10 defeat. On the basis of last year's experiences with Northeastern his squad is apparently in for a tough battle. The 53ers were crushed by the Huskies last year to the tune of a 25-0 score. With their added seasoning, however, the Beavers should be tougher this time.

Tackle Is Problem

One of the foremost problems facing the 53ers will be that of filling a big hole at tackle left. Two of Pearlman's regular tackles from last year have been injured, although not in football, and hence are not available for duty this year.

One of last year's returning stars will be Karl Jippie at the end position. Co-starting with him is Larry Gleason at the other end. The pairing will be made purely by chance, instead of the usual method of seedling which tends to keep the favorites from being eliminated. Once eliminations are finished in the tournament, Thirty-two doubles matches will be played, the remaining being singles. Captain Jerry Coon, who is not a member of the varsity, will anchor the strong side of the Soph team. As a result of filling a big hole at left tackle, however, the Beavers should be tougher this time.

The entire starting Soph team, under Coach Marc Pearlman will have the strong side of the Soph line at right tackle, but the other tackle is still a dilemma mark. John Muir will team up with Chuck Abbott at the guards, and over the hulk will be veteran nose, Roy Piper.

Quarterback

The backfield will have Hall calling the plays from quarterback. Co-ported by Dave Treadwell and Mort Friedenthal at the halfback line, they will be ably assisted by Chuck Mullen. The backfield will have Hall calling the plays from quarterback. Co-ported by Dave Treadwell and Mort Friedenthal at the halfback line, they will be ably assisted by Chuck Mullen. Aviators Now Fly For Less At Club Rates

The M.I.T. Flying Club announced last Monday it is lowering its rates by 50c. per hour on all types of aircraft. Flying Club dues are also being lowered.

The announcement was made at a rally of the club on October 2. Other features of the meeting included Professor Roppen of the Aeronautical Engineering Department, who discussed some of the advantages of his new 4-place helicopter which will soon appear on the market.

Flying rates are now $3.20 per hour for the club's instructional ships and $3.60 per hour for the bigger planes. Because of the advantages of his new plane, the club will be able to purchase a new airplane, thus modernizing its equipment.

In addition to his present posts at Technology, Dr. Farnsworth is a consultant in psychiatry at the U.S. Naval Hospital in Chelsea, Associate Physician at Maimonides General Hospital, a member of the Boston Society of Psychiatry and Neurology, the American Psychiatric Association, and the group for the Advancement of Psychiatry.

Through various statements, including a full report of M.I.T.'s Psychiatric Service in the forthcoming Tech Engineering News and an address delivered before Freshman Convocations last Wednesday and today, Dean Farnsworth asserted the meaning of student freedom. His unique interest in the application of these principles in educational institutions provides fresh reasons for the existing and proposed policies of the office.

An excellent chance to see these principles in operation is provided through the examination of the Institute's revised probation system. Formerly, a student who committed a serious breach of Institute rules was called into the Dean's office, severely reprimanded, deprived of many privileges including the right to participate in extra-curricular activities, and sent from the office. Under a program working out under Dean Baker and Dr. Farnsworth, the entire program for handling such cases has been revised. The student's problem is now intelligently discussed among the student, the dean, and a psychiatrist or psychologist. From information gleaned at this meeting, suggestions are made with respect to participation in extra-curricular activities, setting of scholastic goals, and adjustment of the individual to a normal college life. Each student is required to make progress reports, and it is through such reports that the success of the program has become evident.
