It is expected that a number of anonymous letters and petitions appear from both the Institute Community and outside sources. A student group, which will be announced as "Blackbird" for MIT, applied for Class B status as an activity sponsored by the Student Senate. President Killian had initiated the process of establishing a student senate without tenure. At the week of May 9, 1951, the Middlesex County Grand Jury brought forth an indictment against A. Herbert A. Hildreth, a controversial insurance man and undercover FBI agent. His activities included evidence by the picture, and one had to fight to get to the dance floor.

Quadrangle Drops Hazing; Urges Class To Follow Suit

Last Sunday morning, one of Tech's oldest and proudest traditions, hazing, officially disappeared from campus when Quadrangle Club, the sophomore honorary society, voted to no longer support or participate in the hazing of freshmen. Since last year, when Institute Committees passed the Quadrangle Club Resolution, it has all been wondering what Q-Club's sophomore society for the last five years has led the Quadrangle Club to the threshold.

The Quadrangle Club, in recognition of the fact that hazing has been outlawed by the Institute Committee, has resolved that it will no longer participate in the hazing of freshmen, and strongly recommended that the Sophomore Club follow its example.

Statement of Policy

The Quadrangle Club herewith declares its entire support for a service organization, inexpressing the spirit and unification of the student body.
I Zimmerman, Jaimie Glottmann, Barry Rutter, Joel Shoobe, Don King, havt not been lost.

Sailing At MIT Provides Diversion And Competition

The Nautical Association of the Massachusetts Institute of Technology (MIT) has a long tradition of sailing excellence, both in college and national competitions. Founded in 1897, the Nautical Association has consistently shown its prowess in sailing, particularly in the Olympic Games. The MIT sailing teams have competed in various classes, with the Finn class being a notable one.

In the 1948 Olympics, Edward A. Olsen '41 and John Marvin '49 were the representatives from MIT. Olsen won the Finn class competition in 1948, marking a significant achievement for MIT. John Marvin also competed in the event, although he did not win.

The MIT sailing team has not only excelled in Olympic events but has also participated in other international competitions. The team has been part of the Inter-Collegiate Yachting Association (ICYA) and has competed in various college sailing events.

The MIT sailing program is well-resourced, with facilities at the Cambridge Yacht Club and the Sailing Pavilion. The program is open to both men and women, offering a rich reward of sailing on the Charles River and Lake Woburn. The program is vast, with 350 members and 26 sailing classes.

The MIT sailing team has a rich history of achievements, with wins in various collegiate and inter-collegiate races. The team has contributed to the growth of sailing in the United States and has been a significant part of the international sailing community.

MIT Represented In Olympics

C. Eric Olsen '41 and John Marvin '49 were the MIT representatives in the 1948 Olympics. Olsen won the Finn class competition, while Marvin competed in other classes.

MIT's sailing tradition continues to this day, with the team participating in various college and international sailing events. The program at MIT is one of the most respected in the United States, and its contributions to the world of sailing are significant.

The Problems of Observing and Recording an Engine's Performance in the Air are legion. Most recently, a Boeing B-50 and a North American B-45 were readied as test beds for Pratt & Whitney Aircraft's J-57 and J-75 turborotors. The experimental power plant, contained in a retractable pod in the bomb bay, can be flown to locations where atmospheric conditions permit most efficient testing. The prototype is then extended into the air stream for actual flight work with the regular engines idled, and the job of observing and recording in-flight performance begins.

From the first shakedown flight to the test engine's eventual acceptance, invaluable information is gathered. Perhaps the most vital contribution made by P & W's flying-test bed program is the great reduction in time between initial development and quantity production of engines. Important, too, is the open access and diverse range of talent involved in such a program, for it spells out remarkable opportuniy for today's engineering student.

What's Doing...

at Pratt & Whitney Aircraft

Test Lab "Upstairs"

Even in aviation's earliest years, it was axiomatic that "proof must come in the air." Out of this, the flying test bed was born ... and slowly grew to its present-day stature as an indispensable engineering tool, implemented by an extensive variety of engineering skills.

The annual Freshman Acquaintance Dance sponsored by the Freshmen Coordinating Committee for the first year men will be at 7:00 p.m. Wednesday, Sept. 26, in the Library Lounge at 5:00 p.m.

Miss Day has written several books and holds some rather unorthodox positions concerning labor, which she will express.

VFC MEETING
The next meeting of the Inter-
V'arsity Christian Fellowship of MIT will be at 7:00 p.m. Wednesday, Sept. 26, in room 10-280, Mr. Weyden, who has counseled for the Billy Graham team and who has traveled extensively in Europe will be the guest speaker.

FRESHMAN ACQUAINTANCE DANCE
The annual Freshman Acquaintance Dance sponsored by the Freshmen Coordinating Committee for the first year men will be in Moris Hall, Wal-
ter Hall, and Ffrench Hall, Sept. 26, from 8:00-12:00. The music will be supplied by Jerry Bourn.

FOREIGN STUDY APPLICANTS
Students who are Fulbright appli-
ants, Rhodes scholarship applicants, Bureau of Area Convention scholar applicants, Marshall scholarship appli-
cants, and any other students inter-
ested in foreign study are invited to a discussion meeting at 5 p.m. on Thursday, Sept. 27, in the Library Lounge 10-280.
