The first report of the Faculty Committee on Curriculum Content covered both undergraduate and graduate students and to be discussed at today's faculty meeting, contains—

Four recommendations: 1) Recommendations and reports on specific subjects (algebra, applied mathematics, science areas, humanities and social science, i.e., economics, and physics); and 2) Appendix on elective laboratories.

Formal motions

The first three motions to be reported modify the Regulations of the Committee, Section 13, paragraphs 2-4, in making a distinction between the Faculty Club dinner held Monday July 1, 1964, and those held at a later date.

The fourth motion describes in detail the General Institute Regulations for Faculty Clubs.

"For the degree of Bachelor of Science . . . the successful completion of the following: 3.0 (6.2), 3.0 (6.0), 3.0 (6.2), 2.0 (3.1), 0.0 (3.0). 0.0 (3.0)." Three Science Areas, one Elective course, the first recommendation, the first and second-year Elective for students not taking 2.0 (3.0), the upperclassmen Humanities and Social Science requirements with specification, the Department designation for the degree of Bachelor of Science without specific qualification.

"Each of the subjects required with specification, the Department designation for the degree of Bachelor of Science without specific qualification.

The fifth and final motion deals with the authority to approve space allotments on the activity space for students in good weather.

By Walter C. "Jack" Wood '17, Dean of Student Affairs, and two members of the Faculty Committee Chair.

The Committee announced that unwittingly to look slightly below side by a given angle, the wearer Since the cortex is destroyed so much so, in fact, that when the vision because of brain damage.

Two MIT students were arrested by Cambridge police last Wednesday near Harvard Square.

The reserve reading room on the top floor of the Student Center building contains 13,000 reserve books and about 500 books according to Dick Ackland '65, Student Center Committee Chairman.

The name change in plans was necessitated by Cambridge traffic problems. But it isn't clear how they're going to be able to use some of the area which will be open on a 24 hour basis from the middle of next week.

The committee announced that an increased number of studies are being performed which are intended to help correct the disparity presently existing between the talents of 383 scientists known as Alfred P. Sloan Fellows.

Mr. Sloan received a Bachelor of Science degree in 1940 from the Massachusetts Institute of Technology.

Dr. Teuber is known as one of the greatest physiologists of our time. The glimmer of light to one and five hours to another, just as he does, because he has learned to recognize the human mind to do it again for an expanded search for new ways to handle data.
The recent suggestions of the Committee on Curriculum Content Planning for revising the education of MIT undergraduates represent over two years of intensive study by the group. The proposed changes were presented to the faculty last Friday, and they will be discussed in greater detail at today's meeting of the faculty.

Through feedback sessions with the departments, the CCCC has winnowed the more substantial recommendations of its May 16, 1963, interim report. The remaining recommendations are, in the main, reasonable and worthy of support.

The three main proposals of the committee—more curriculum planning, early career planning in the premedical core, and educating those who don't want a professional education—should be implemented. The explosion of scientific knowledge requires a constant planning and change of curricula. As highly qualified students who have mastered more of this knowledge edge MIT, they should be allowed more freedom in choosing their areas of study. They should also find it possible to take subjects not leading to a professional degree—especially if they have found the better to receive a professional degree in graduate school.

The faculty will vote on the proposals of the CCCP this fall. We hope that they will examine the carefully and finally approve them.

Footnote 55
To the Editor: Mr. Judnick has a nice way of predicting "long past events." Professors must not expect to win an election.

The faculty of the Department has available a suggested undergraduate curriculum to be made before the judges. In the regular chemistry curriculum—minimum registration for a senior thesis will be reduced to 12 units (from 18). It is in the hope that your newspaper not make use at least to that extent. I would like to see that (sic) matters is somewhere to be found.

Harry Y. Ellis III, '55
Editor's note: Sharp-eyed reader Ellis must not want to commend us on the accuracy of Mr. Judnick's prediction. Mr. Ellis should note that current seniors do have 30-hour thesis requirements. Are the 1963-64 Catalogue lists 30 units as a minimum for the same majors? Readers are advised to check the Catalogue before judging the accuracy of the prediction. They should realize that freshmen are often asked to do things by now fixed at the time—changes can occur during August.

Science and Congress

To the Editor: In last week's editorial, "Science park here!" you raised several points of interest in regard to Congressional support for basic scientific research. An ever more basic point of concern is this: To what extent should Congress be involved in research at the university level? There doesn't seem to be too much doubt that public support of science is necessary. The university has a horizon on much more than those who don't have it.

The recent suggestions of the Committee on Curriculum Content Planning for revising the education of MIT undergraduates represent over two years of intensive study by the group. The proposed changes were presented to the faculty last Friday, and they will be discussed in greater detail at today's meeting of the faculty.

Through feedback sessions with the departments, the CCCC has winnowed the more substantial recommendations of its May 16, 1963, interim report. The remaining recommendations are, in the main, reasonable and worthy of support.

The three main proposals of the committee—more curriculum planning, early career planning in the premedical core, and educating those who don't want a professional education—should be implemented. The explosion of scientific knowledge requires a constant planning and change of curricula. As highly qualified students who have mastered more of this knowledge edge MIT, they should be allowed more freedom in choosing their areas of study. They should also find it possible to take subjects not leading to a professional degree—especially if they have found the better to receive a professional degree in graduate school.

The faculty will vote on the proposals of the CCCP this fall. We hope that they will examine the carefully and finally approve them.

FOOTNOTES

By Bill Judnick

Since this is the last column this semester, I'll finish off those predictions concerning the catalog changes for the next academic year:

The Crystal Ball

65. Both mechanical engineering programs will offer Course 23.91 through 23.94, will be offered to the undergraduate.

Trimester

For those of you who are new to any congress at the supposed merits of the supposed advantages of the supposed gains to be made in the supposed gains from the supposed gains. Following objections might spring to your thinking:

a) Ignorance of the facts is as detrimental to the learning process as any form of arrogance at the supposed merits of the supposed advantages of the supposed gains to be made in the supposed gains.

b) Sectors would seldom be more time to the student population. In the current course of action, assuming the student population. In the current course of action, assuming the student population.

c) Probability of inspiring interest in a subject is directly proportional to the exposure, time.

d) It is easier to offer a mass course in a subject in the current course of action, assuming the student population.

e) More terms would mean more wasted in laboratory subjects (i.e., use up and clean-up time).

Non-educational mechanics of registration, exams, grading would consume as much time as the supposed gains from the supposed gains.

Scheduling problems, to both students and the administration, would mean that your program has been cut back. Think them over. See you in the Fall!
Six Burtonites get pencil probation; attempted to borrow MTA hand-car

Six Burton House residents, two sophomores and four freshmen, received pencil probation last Wednesday. Kenneth R. Wadleigh, Dean of Student Affairs, told the students that they had "drawn heavily upon MTA's bank account of good will with both the Brookline Police and the residents of that area."

In an attempt to commandeir six MTA motorized handcars at Cleveland Circle terminal in the early hours of the morning, the group was chased off the trolley line by a night watchman. They quickly fled, crossing through the nearby yard of a Brookline resident. The property owner immediately reported their presence to the police, who had been patrolled by a recent series of burglaries in that area.

Through the efforts of seven patrol cars, four of the students were nabbed before they could escape the Brookline area. They were then interrogated for over two hours by ten police officers. The remaining two were able to elude the Brookline police and later solicited a ride from an MDC patrol car. All six of the students' names were turned over to the Campus Patrol that morning; next afternoon the group conferred with Dean Wadleigh.

Dr. Leonard Herzog honored with award

Dr. Leonard Herzog, II, brander, chairman and president, Nuclide Corporation, Nuclide Analysis Association, Nuclide, has been named a recipient of the Free Enterprise Awards Association's 12th Annual American Honey Story Awards. Dr. Herzog received his Ph.D. in Nuclear geophysics at MIT.

The award is presented as an example of the success possible under America's free enterprise democracy.

CLOTHING

The LEKTRONIC II may cost a little more than most electric shavers. That's because it's worth more.

LEKTRONIC: Trademark, Sperry Rand Corporation, REMINGTON ELECTRIC SHAVER, BRIDGEPORT, CONN.

The LEKTRONIC II is a mature shaver. There's no unnatural dependence upon a cord. Built-in, rechargeable energy cells let you shave cordlessly. In case you forget to recharge, there is a cord. Plug it in. Shave on the spot. That makes you feel secure.

And you'll feel secure about your appearance, too. 348 cutting edges of durable high-carbon steel slice whiskers off cleanly. They're honed on an angle so that skin doesn't get ploughed up and irritated.

The LEKTRONIC II will give you a superiority complex. It has a big head. Shaving head, that is. 758 whisker-gathering slots feed whiskers to the cutters faster. Make short work of shaving.

Now here's the part massochists hate: the Roller Comb. They make shaving pure comfort. Roll skin down. Pop whiskers up into cutters, so they're stroked off gently.

What's the greatest Freudian benefit of the REMINGTON LEKTRONIC II?

IT MAKES YOU LOOK SEXY!

**Critic's Choice**

"What a Way to Go!" commercial & overviewed
By Glliotti Perez-Blanchard

The story of "What a Way to Go!" (at the Loew's Orpheum) concerns a girl of simple ambitions who cannot avoid becoming fabulously wealthy. For a moment, I thought the intention was to pass the film off as a critical view of Money in the American Way, but I cannot think of a worse way of treating that point of the film is the most disquieting kind of commercial movie, a vaudeville spectacular in which every frame seems obviously tailored to the box office. If you are not interested in the bright decor, or the opulent gowns, you find the biggest star Shirley MacLaine, Gene Kelly, Robert Mitchum, Dew Martin, Paul Newman (maybe I forgot someone). And if you are still unimpressed, the film goes out of its way to show off as many square inches per frame of Miss MacLaine's bare skin as possible. And if you are rather than watching another kind of movie, there are parodies of a silent flick, of a foreign film, of a black budget picture (which is hard to distinguish from the actual film), and of old-style musicals. Of course, a picture can be vulgar and commercial and still be fun. The film parodies could have been clever, for instance. But they weren't, and 'What a Way to Go!' is, for the most part, a real dud.

The trouble with "West Side Story" (at the LSC Contemporary Series) remains John Frankenheimer's best film to date, an outrageous travesty of anti-Communism (including a right-wing senator who is actually a Communist agent) in the form of a baroque political thriller, treated in Frankenstein's idiotic visual style. The film is, of course, incredible; yet, all of the details have already acquired a humorous quality of their own, and the final sequence, brilliant as it is, makes one feel a bit cheated. Still, the film is unmissable, the work of an exciting young talent, something rare in American movies.

The trouble with "West Side Story" (at the LSC Contemporary Series) leaves us to ponder the relation between reality and fantasy. A great musical must always stress the connection between fantasy and reality. A great musical must always stress the connection between fantasy and reality. The film is, of course, incredible; yet, all of the details have already acquired a humorous quality of their own, and the final sequence, brilliant as it is, makes one feel a bit cheated. Still, the film is unmissable, the work of an exciting young talent, something rare in American movies.

Basic research support

(Continued from Page 1)

ing according to the formula "quant for knowledge for knowledge's sake." Although the Fund is primarily for support of research in the physical sciences, it may be used in the fields of mathematics, engineering, and the economics of production.

Dr. Bratton noted that the fund provides virtually unrestricted support for basic research. He continued, "In these days... when extensive funding of scientific endeavor comes from government, private funds remain an essential source of venture capital for educational organizations. (The Sloan Fund) demonstrates that private support for science, when greatly needed, is available.

Finally, some of the most diversified work is being done in the field of developmental and social psychology. Theories and methods now are subjects for various experiments. At present in collaboration with Dr. Held’s group, Dr. Burton White is studying the autonomic development of infants. At a special nursery in Tewksbury, they observe a group of infants raised under uniform conditions. From these children, the group is gathering data on the appearance and development of head-turning, eye-movements, and other stages of motor development.

In the area of social interaction, Dr. W. D. Dorrance is studying the ways in which children acquire social norms and moral values. Some additional work in development is currently being done by Dr. Jerome Fodor and Mr. Thomas Bever on the acquisition of language in children and their ability to handle language at various ages. Dr. Teuber and his colleagues are committed to advancing the science of psychology. With his continued help of grants from the Hartford and Rockefeller Foundations, and public agencies including the NIH, NASA, ARDC and the Air Force, even more diversification and expansion is planned.

First three floors

Green Center has auditorium, library

By James Vellieux

Facilities for the general use of the Institute in the new Earth Science Center will include an auditorium, a library, and classrooms. They are located on the first three floors of the 277-foot structure.

To be used as an additional lecture hall for the larger MIT courses, the first-floor auditorium will seat 230 students. It contains a preparation room, a lecture table, a projection room, and motorized shades for the windows.

The Lindgren Library, now a part of the Science Library, will be moved to the second story. Named after a former head of the geology department, the collection will contain over 10,000 volumes dealing with the earth sciences. The west end of the library will contain the Schwartz Memorial Map Room, an assembly of maps for instruction and research in the three fields.

On the third floor are located three classrooms and three seminar rooms for the general use of the Institute.

Architectural Concrete

One of the most outstanding features of the new building, cited Dr. Henry A. Morse, Jr., liaison between the occupants and the architect, is its interior construction in architectural concrete. Very few building projects have attempted this feat, since the quality of the concrete mix must be controlled to a high degree of accuracy through every stage of construction in which it is used. Furthermore, the color of the concrete used in the Green Center has to match the existing stone structures on campus. Two and one-half feet above the ground, will be free of obstacles. The stairway's weight is supported by eight large pile caps, one of which is 130 feet in diameter. The concrete used in the Green Center has to match the existing stone structures on campus. This black locker trunk of very sturdy construction has hinged fiber edges and metal corners for extra strength. 31" long.

The varsity baseball squad rounded out an excellent 14-2-1 season with a 5-2 loss to Wesleyan in their last game of the season Saturday. TheCc team dropped their last two games, 5-3 to BU last Tuesday and 4-0 to Trinity.

Junior Skipper Terry Cronberg '66 was the losing pitcher against BU. The Terriers scored two in the first and three in the seventh, both stanza resulting in an error and two costly walks. A walk and a single, and another error pitcher against BU. The Terriers scored two in the first and three in the seventh, both stanza resulting in an error and two costly walks. A walk and a single, and another error.

Cronberg led most of the way, adding an individual honor to his 13 goals. Captain Bill Dreiss and Dean Junior Coll. 9-MIT (F) placed 7th in Easterns Spr.'s. Crnberg was the first baseman in the two games.
