In an interview, Prof. Forrester stated that the overall goal of the project was an attempt to assist current men's habit of testing complex systems as simple systems. Man often assumes that the system is a problem to "do to" and space to the symptoms," neglecting the actual possibility that it lies in the structure of the system. He cites today's welfare system as a prime example of an instance where society is combating the symptoms instead of the underlying causes of a major problem. He desires that obfuscation be said management situations since they are both complex social systems whose central task is to select the relevant sets to attack.

By John Dulcey

Modernization of the engineering library, a vital part of Project Isters, should be completed by mid-May 1968. Charles S. Stevens, director of this first phase of the project stated that a steel girdle at the end of spring 1968 term delayed the start of the program.

Forrest finds critical trade-offs are jobs, housing

(Continued from Page 1)

plan, there is simultaneously a high demand for people per industrial area, and a low density per housing area. At this point, the city is physically filled — essentially "frozen." In this period, industries are being separated by others, and the trend is for employment per industrial area to decrease while density per housing area increases. Thus, although opportunities are going down, the number of people is rising.

Professor Forrest points out that dums are marked not only by avoided housing but also by excess housing. This excess housing is often ignored, however, because it appears unimportant. The lack of favorable balance of tenure deprivation of the money needed for the upkeep of these facilities, causing people to avoid together.

Housing-job trade-off

He sees cities as constantly changing their state of equilibrium due to changes in their degree of attractiveness. The relative low of housing and jobs can always be changed, although only in opposite directions, since their total is subject to change once a city has completed its run of growth. In a trip to Britain, he saw how political factors can also be a crucial upset.

Prof. Forrest's research resulted in three criteria by which he feels that our cities can be made more desirable: increased job opportunities, improved economic institutions, and a relative housing shortage. He says new tax and zoning laws in the effort to move the job-housing trade-off to cities in favor of jobs. Attracting new industry into cities will create more and better jobs for today's poor classes, enabling them to afford better housing, and offering the "the opposite mobility" needed for social acceptance.

Introflex will install new data system

Big problem.

UNIVERSITY PARKING LOT

Simple solution:

New Honda.

This lean, lithe Honda 125 Super Sport can be the answer to a lot of problems besides parking.

Consider price. You can buy this beauty at an impressively low initial price; fuel it for a fraction of what you'd spend on a four-wheel gas gupper. And, of course, there are the pleasantly priceless costs of main- taining and insuring a Honda.

The 125 Super Sport couples lightweight economy with red hot per- formance features. Its dependable four-stroke parallel twin engine pro- duces a dazzling 13 hp; acceleration that matches the best of them.

And styling. The 125 Super Sport is nothing but class from its stream- lined pipes to its sculptured tank to its rugged telescopic front forks. The sleek and sassy 125 Super Sport. Is there a better way to solve your problems?

Seminar

The first monthly Compton Seminar has come and gone, and its success will be regarded in the light of work of the ad hoc committee which was formed four months ago to look into the lecture situation which, at first, was somewhat controversial.

Based solely on the presence of Mr. George Bundy in October, the usual attendance of a person who has been selected for the second program who will reflect both the complexities and controversies of our times. It is true that George Bundy is a person who, during the first of the series was more a reflection of genuine interest and community than merely a demonstration of the fact that the term had not yet really begun.

One individual would like to single out as being largely responsible for the success of this initial seminar is Mark Milkis '90. His efforts toward bringing lectures and discussions has been outstanding. However, along with the lectures, we would like to issue a warning. If the Compton Seminars are to be an annual affair, rather than merely an event for the election year, it is necessary that an individual or body be prepared for the work in succeeding years. Beyond this, we can find nothing to criticize in the first Seminar, and wish Mr. Milkis equal success in the next eight such ventures.

Traffic

MIT has always prided itself on its ability to find workable, usable solutions to real-world problems. They have found, both in teaching and in practice, that a pragmatic approach to a problem is more fruitful than an abstract, idealized modeling.

They have found, both in teaching and in practice, that a pragmatic approach to a problem is more fruitful than an abstract, idealized modeling. We are dismayed, therefore, to read the plan presented to the city of Cambridge, which would allow the complete elimination of two lanes of traffic each way, in view of the fact that the traffic situation is merely being taken into account.

One of the plan calls for Mass Ave to be narrowed by 16 ft., for fences to be built along the road at all but certain intersections. We would like to ask the administration whether they really imagine that the current plan will not, in fact, create more chaos, though perhaps a less dangerous form of traffic. We are encouraged that an attempt has been, and is being made to solve the problem of the road which most divides our campus. But we feel that further, more realistic studies are needed before work can be begun.

Excessive: Nixon interview

It was a great honor for this reporter to be recently asked to interview the incumbent chief executive of the United States of America, Mr. Richard Nixon. Here is the text of that interview. Mr. Nixon's statements are in italics.

Q: Mr. Nixon, I hope we'll be able to get you to pick a few of the most important issues.

A: "Don't worry, I'll keep it simple. You wouldn't let me pick a few anyway if you picked me for this honor. I'm just the greatest guy on the street here."

Q: Talking for moments, could you tell us a little about the new Nixon and some of your past problems?

A: "Part of my problem has been my outspokenness. I am not afraid to speak my mind. I will not continue to be controversial. Otherwise, you'd be bored silly."

Q: How do you view the Democratic Party and its candidates now and in the past?

A: "The party has been captured and is being run by the liberals. My opponent (Henry Douglass '60) was a member of a small clique which joined the notorious party-tour, Vito Marcantonio... who is constantly and repeatedly in the political arena. My opponent was committed to supporting people opposing Communism for the first time."

Q: "Mr. Stevenson received his education from Dean Ashland's of the Communist movement. The Communist at the press of the United States was handling Adlai Stevenson with kid gloves."

Q: Mr. Stevenson says that these are not standard statements.

A: "President Truman is the last man who should talk about anybody lying. He has had plenty of practice. (away) You want to understand I was a very young man."

Q: Do you think that one has more taxes and tariffs and the like should be done away with in this campaign, I'd rather have good old US Army khaki than State Department pink. If the day of our freedom and Communism which is just around the corner, one can only hope to catch the bandwagon and be there.

Q: That makes things clearer. In general, how do you view point the 'New South'?

A: "After all, the South will step with its time-honored beliefs. This year crop of candidates was lettuce's or a hatchet. A "Republican Administration will move to stop our great housewarming of Communists and the struggle for control of the administration in the legislative branch. We have no fear of finding any Communist on the committee. It is the committee that should not have been formed." What about demonstrations and voice reaction? "It is a standard Communist tactic to gain the sympathy of the people. Whether or not it is justified."

Q: Do you feel about Social Security and pensions?

A: "The Social Security Act was a major accomplishment; I am opposed to pensions in my firm, as it makes laboring more attractive than working."

Q: That makes things clearer. In general, how do you think the 'New South' will move?

A: "As far as peace, there's too much talk of compromise and too much talk about the South. I only hope they will step up the search and add no more."

CFA

To Prof. Chomsky

To the Editor: I have just returned from Professor Chomsky's talk on Vietnam and U.S. Foreign Policy, I respect this man's views. Let us never downgrade the strength of this country in an era of great change and intense reaction?"

Q: What do you feel about U.S. Foreign Policy?

A: "I believe the United States was a major accomplishment; I am opposed to pensions in any form, as it makes laboring more attractive than working."

Q: That makes things clearer. In general, how do you think the 'New South' will move?

A: "As far as peace, there's too much talk of compromise and too much talk about the South. I only hope they will step up the search and add no more."

Professor Miller to head Course XVI

Professor Rene Haurobert Miller has been named the Head of the Department of Aeronautics and Astronautics to succeed Professor Raymond L. Helfgott, who will become Dean of the School of Engineering November 1.

Professor Miller's specialty is advanced and vertical flight vehicles, a major area of research at Princeton University which has been the site of cutting-edge research for many years.

College World

Princeton University should admit coeds, 1000 of them, according to a study conducted for the University's board of trustees. The report stated that failure to become co-educational would mean that "within a decade, if not sooner, Princeton's competitive position for students, for faculty, and for financial support, would be less strong than it is now. The time, then, is crucial to Princeton's future." Meanwhile, four other all-male institutions have established plans to admit coeds: Franklin and Marvin, College, Kenyon College, the University of the South, and the College of Arts and Sciences at Georgetown.

A veteran of years of industrial practice, Professor Miller has held high positions with the Glenn L. Martin Co., McDonnell Aircraft Corporation, and Kaman Aircraft Corporation. While Vice President of Engineering at Kaman, he was responsible for completing the development of the KOK-I helicopter and initiated work on a number of new projects, including the first remotely controlled drone helicopter, a helicopter autogiro and a rocketcar for serial delivery. While with McCanell, he worked on a variety of projects, among them the development of a ramjet helicopter.

While at MIT, Professor Miller has taught courses in air transportation and flight vehicle design.

concert... Writing verses Irish Rovers

Led by resilient impresario Will Miller, the Irish Rovers played a concert at Jordan Hall last Friday evening. September 27. The Rovers are gifted at singing and arranging but definitely weak in composing. For the most part, their new songs were tite; one can listen to "stop, look, and listen" just so often. The bulk of the concert, however, consisted of excellent traditional songs Irish to the end, they sang songs about sex while drinking; they told ethnic, religious, and bawdy jokes while drinking. Will has a banjo to the old Irish music (please, no outcry from folk singers). The decline of folk music is lamentable, but there must be a better way to save it than by copying old accordian, George Millar on guitar, the group's lead singer. The Rovers put on an extremely good art, yet it turns out that they have no great love for folk music and that their first hit, does not offer a fair view of their primary interest is show business. The Rovers now have some albums, the latest better prepared and more meaningful. Particularly noticeable is "Unison"s" song, they are a good investment, but similarity to "Puff, the Magic Dragon" in you will have to endure some of their genre, style, character, and friendly, own compositions.

The Rovers are talented and should be able to survive on the basis of their Irish folk songs. The decline of folk music is lamentable, but there must be a better way to save it than by copying old songs. The Rovers now have some albums, the latest better prepared and more meaningful. Particularly noticeable is "Unison"s" song, they are a good investment, but similarity to "Puff, the Magic Dragon" in you will have to endure some of their genre, style, character, and friendly, own compositions.

What is most disappointing is that the

"An unusual high point of the evening was the only tangentially related to the concert, was the program distributed to patrons outside for $1. It contains words and music to four songs, some poems, and two very short stories. The stories alone are worth the money.

II wishes to thank the Dallas Chamber of Commerce for purchasing space for this advertisement
Let's not knock the Velvet Underground too much. After all, they are a pretty good realization of all their intentions. But what are they intentions, and what is their relevance today? The Velvet Underground played two sets and a half Saturday night at the Boston Tea Party. They were recruited by Andy Warhol, the producer of the band, and the music can sound like it, too, Jim Stearns, VP, compare listeners to looking in to "the kitchen at a Campbell's soup factory." In other words, they're almost a drag. But then the VU's appearance was given the utmost of an extraordinary moment. The VU, everybody knows, is a solo work, and it's their symphony of "Wings" the only Buckley number of the night. They are aware of the line: "the line is straight, but the instrument is not," in other words, they are aware of the fact that their song has its own distinctiveness whether expressed, whether they are singing together or not. In fact, the VU's entire put-on, and the VU's entire put-on, is a synthesis of sounds both instrumental and vocal. Their value is more than the song (and excellent the words may seem). Even without the words it may not have resulted from less meaningful is to care. It is necessary for the audience to know the words by heart, "The Gift", the story of a young man whose life is saved by a group of four people: Jimmy Porter, his wife, an old and a mutual friend, Cliff. The meeting will commence at 8. It is the policy used by Tim Buckley, young singer in her own right, and the other members of the VU. They share their music is contemporary. The style of the band playing a song, be it street and driving and others. It is their mutual understanding of that sad, proud interpretation of Alison by Karen Down, a girl whose sensitive spirit is to care. It is necessary for the audience. Paul's songs, and those of her mother to match it. For the better—but higher taxes may not have resulted from less...
If there were any bright spots on this gloomy afternoon, the kickers came back next day to face Holy Cross. From the engineers' point of view...
