By R.G. Hawbison

A small crowd of onlookers attending a Faculty meeting calling in Kresge Auditorium Wednesday afternoon to discuss the future of the Special Laboratories.

Four proposals were presented and discussed. Three of these were circulated with the call of the meeting and were also printed in The Tech, February 10. The fourth was a motion presented by Professor of Aeronautics Wallace van der Velden.

Surprisingly, although the motions varied greatly, there were few heated discussions and very few disagreements from the disappointingly small turnout of faculty members.

Prof. Jerome Levitin proposed the first motion which had been designed by Professors Edward Fredkin, Electrical Engineering, and Joseph Weizenbaum, Electrical Engineering. The proposal called for the setting up of a self-sustaining independent organization which would support university research. A number of universities would be involved in sponsoring this project with each providing its own special talents to the organization. As stated by Professor Fredkin, the point was to create a new funding basis not related to the Federal Government.

The second motion was submitted by Professor 'Anther Shaprio, head of Mechanical Engineering, and seconded by Professor Jerome Levitin. Shaprio's omission of the Labs and for a committee to recommend suitable guidelines for laboratories in the future. Professor King argued that as an educational institution MIT should deal with such laboratorv. Admitting that divergence would be painful, King submitted that it was inevitable.

At 10:15 am. Krasner stepped into the defendant's dock; the judge said "Attorney has waived the right to enter a plea." Krasner spoke into the microphone "Not Guilty." Attorney Norman Zalkind then requested 20 days in which to prepare a special plea and Judge Lurie granted his request. The whole procedure took less than five minutes.

The case should come to trial in March or April. Zalkind said. Until then, Krasner is free on $1000 personal recognizance. Zalkind carefully instructed his client to speak to no one about the case, so no comment is available from Krasner.

More was learned about the indictment and the Grand Jury's investigation into the January events from sources within the MIT administration. The indictment accusing Krasner was apparently handed down last Friday, but was not entered until state police picked him up at the Armory Monday afternoon.

MIT 'Cooperates'

However, according to Institute officials who asked not to be identified, the investigation began almost as soon as the occupancy of the President's office had ended. Administrators talked to District Attorney John J. Droney the day following the end of the occupation, and he reportedly "wanted to know about the battering ram right away." They said MIT had cooperated "wholeheartedly" with the Grand Jury's investigation, this probably includes testifying, although they will activities for this spring is because, as one official said, "Grand Jury proceedings are secret."

The possibility that there will be more indictments of this sort has been raised, but the only reason is that the Grand Jury is still in sessions and could indict anyone this week if they felt the evidence warranted such an action. MIT will continue to cooperate with them.

Cane-cutters start for Cuba

About 65 members of the Vencenza Bridge, a group of American students going to Cuba to cut sugar cane, assembled in the Student Center before leaving for Canada Wednesday afternoon. See story on page 8.

Professor Jerome Levitin, VI and VII, explains his proposal to set up the special labs on a commercial, non-military basis (Please turn to page 11)
It is time to stop, think and act about the great problem no one can solve but ourselves.

I.

For the last 40 years every President of the United States has faced the problem: how to do what is best for the people when the people do not know what is best for them.

Under universal suffrage good leadership requires intelligent followership which in turn requires informed citizenship.

Where are you going to lead a people who believe that deficit spending reduces the amount they must pay for government?

Where are you going to lead a people who do not know that higher incomes without higher production do nothing but increase living costs?

Where are you going to lead a people who do not know that payroll comes from the customer and that the customer is the worker who gets the payroll?

You are going to lead them into inflation and then take the blame for the high cost of living. You're damned if you do and you're damned if you don't.

II.

Do you remember Dwight Eisenhower's futile fight to protect the purchasing power of the dollar? He wanted it protected but were unwilling to do what had to be done.

Newly-elected John F. Kennedy appealed to the people: "Ask not what your country can do for you, but what you can do for your country," but most of the people, ignorant of the economic consequences, still wanted things done for them.

President Nixon, and all future Presidents, will face the same problem and suffer the same discouragements unless the people can be attracted to a simple self-evident frame of reference that dispels economic fallacies by demonstrating that they could not be true.

III.

Fortunately that frame of reference has become available and has been "packaged" and tested to a point where its effectiveness is beyond doubt.

It is the Do-It-Yourself program of Economic Self-Education that has grown out of The American Economic Foundation's exposure of the Ten Pillars of Economic Wisdom to 50,000,000 visitors in the New York World's Fair. Those basic principles (reproduced below), emblazoned on bronze plaques at the Hall of Free Enterprise, have gained world-wide acceptance and are proving the greatest springboard to mass economic knowledge ever devised, largely because of their instant impact. They were endorsed by Presidents Hoover, Truman and Eisenhower who were Honorary Chairmen of the Steering Committee of that popular exhibit. They have been placed in the public domain and can be used by anyone, anywhere, anytime, in any way...

The purpose of this message is to urge everybody of every political persuasion, to join the rapidly increasing number of volunteers who are working, each in his or her own way, to help speed and expand the already astonishing momentum of this self-education program.

Participation can range all the way from getting individuals or campus organizations to reprint this advertisement in spreading the "Ten Pillars" by hand and by word of mouth. Write for free information about how to become an economic detective and expose the fallacies of our times. It will include various ways in which to initiate or accelerate the spontaneous chain-reaction that is making the Do-It-Yourself program "one of the educational wonders of the world."

If you would like to see evidence of the impact that this program is making, ask for our 30th Annual Report.

The Ten Pillars of Economic Wisdom

1. Nothing in our material world can come from nowhere or go nowhere, use can be free: everything in our economic life has a source, a destination and a cost that must be paid.

2. Government is never a source of goods. Everything produced is produced by people, and everything that government gives to the people, it must first take from the people.

3. The only valuable money that government has to spend is that money traced back to it out of the people's earnings. When government decides to spend more than it has thus received, that extra unused money is created out of thin air, through the banks, and, when spent, takes on value only by reducing the value of all money, savings and insurance.

4. In our modern exchange economy, all payroll and employment come from customers, and the only worth-while job security is customer security; if there are no customers, there can be no payroll and no job.

5. Customer security can be achieved by the worker only when he cooperates with management in doing the things that win and hold customers. Job security, therefore, is a partnership problem that can be solved only in a spirit of understanding and cooperation.

6. Wages are the principal cost of everything, widespread wage increases, without corresponding decrease in production, simply increase 3½ times the cost of everybody's living.

7. The greatest good for the greatest number means, in its material sense, the greatest goods for the greatest number which, in turn, means the greatest productivity per worker.

8. All productivity is based on these factors: 1) natural resources, whose form, place and condition are changed by the expenditure of 2) human energy (both muscular and mental), with the aid of 3) tools.

9. Tools are the only one of these three factors that man can increase without limit, and tools come into being in a free society only when there is a reward for the temporary self-denial that people must practice in order to channel part of their earnings away from purchases that produce immediate comfort and pleasure, and into new tools of production. Proper payment for the use of tools is essential to their creation.

10. The productivity of the tools—that is, the efficiency of the human energy applied in connection with their use—has always been highest in a competitive society in which the economic decisions are made by millions of progress-seeking individuals, rather than in a state-planned society in which those decisions are made by a tiny amount of all-powerful people, regardless of how well-meaning, unselfish, sincere and intelligent those people may be.
STUDENTS! The International Student Association of Cambridge will nominate candidates for election to the Student Council at the meeting of Tuesday, February 15, at 5 pm. All interested students are invited to attend. The meeting will be held in room 7 under Harvard Square, Cambridge, just a short walk from the Graduate Student Council.

WOULD YOU LIKE TO START YOUR OWN CHURCH? We will furnish you with a Church Charter and you can start your own church. Headquarters of UNIVERSAL LIFE CHURCH, CAMBRIDGE, will be your church and file with the federal government and furnish you a tax exempt status—all you have to do is repeat your activities to headquarters four times a year. Endless free time will ensue.

To: Undergraduate Assembly, the Black Student Union and the Graduate Student Council.
During the past several weeks, the Undergraduate Assembly, the Black Student Union and the Graduate Student Council have passed resolutions directed to the MIT faculty challenging the MIT judicial process. They have passed resolutions directed to the faculty of the Discipline Committee calling for reforms in the judicial procedure and asking for a review of the case of Mr. Michael Albert. Inasmuch as these resolutions are directed to the faculty, the Committee on Educational Policy as the senior faculty committee, has discussed these issues at length over many meetings.

From our review of the questions raised in the resolutions and other expression of student concern, we discern three quite distinct challenges to the Discipline Committee's actions that must be examined. The first is a challenge to the existing procedures and calls for a reform of such procedures. The second involves questioning whether there may have been an application of existing procedures to Mr. Albert because of his political views and calls for a retrial and more implicit charge challenges the legitimacy and the validity of the process by which it functions.

With regard to the first criticism, the CEP recognizes that many of the members of the community have a legitimate concern about the procedures of the committee. We also recognize the feeling on the part of many in the Institute that certain of the procedures are in need of reform. The CEP, notes, however, that the Discipline Committee itself is both aware of and substantially in agreement with the need for continually improving the judicial procedure. The Discipline Committee studied questions such as those raised in the resolutions and changes in the procedures have resulted and more changes will be made. The Committee is developing several new procedures aimed at dealing with the problem of removing the Dean for Student Affairs from the role of prosecutor. The adoption of the effective operation of a procedure for examining information both from the aggrieved and the alleged aggrieve. These procedures will be discussed with members of the MIT community before being put into effect.

As regards the relation of Mr. Albert's political actions to the Discipline Committee's actions, the CEP, does not believe that the Discipline Committee acted for political reasons. The holding of radical political views by an individual does not exempt him from the obligation to observe the general standards and rules by which alone orderly conduct of the affairs of the community is possible. It does, however, admit that the Committee has an obligation to protect therapeutically expression of those views.

Having discussed the matter at length, the CEP does not intend to undertake or recommend an investigation of the Albert case. The recommendation of the Discipline Committee was carefully reviewed by the Provost and the Board of Members. The Discipline Committee has been and continues to be in the judgment of the Board of Members, of the case. It is the opinion of the CEP that Mr. Albert, without proof of a serious and consequent breach of due process, should be unwarrented and would constitute a serious challenge to the orderly conduct of the judicial process at MIT at a time when its continued existence and orderly evolution is essential.

The third and most serious challenge has been directed at the legitimacy of the Discipline Committee's actions and its procedures and status as a council of the faculty but as regards its very existence.

In any community and perhaps more so in a university, it is necessary to have a process which assures the free and open functioning of the community. It has been the responsibility and the mission of enlightened communities to build this into process for the protection of the individual. At MIT, the faculty has given the Discipline Committee the task of providing over the judicial process in the Institute. Clearly, the procedures through which this process functions are undergoing change. Perhaps more significantly, the process itself is being examined by the force of the Undergraduate Council and the Commission on MIT Education of the 1970s. The thrust of these statements needs the possible modification of the process solely exists for the purpose of the rights of all members of the MIT community as well as the rights of the individual.

In the final analysis, there is no appeal of any judicial action to the community as the concept of due process if there is not an orderly process for its evolution.

CEP defends Discipline Committee's validity

(Ed. Note: The following is an article taken from the MIT Review, published by the Massachusetts Institute of Technology.)

SINGLE DISCS '3.49

AN1GE:L IN STEREI

Cambridge, just a short walk from the Graduate Student Council.
The Faculty, MIRV and You

It is unfortunate indeed that so few people took the time out of their schedules Wednesday afternoon to attend the special Faculty Meeting which dealt with the issue surrounding the MIT Laboratories. Less than one-third of the faculty were motivated to attend. The number of observ- ers was even smaller, as no more than 300 were present.

Perhaps the fact that it was only a "discussion" meeting in which no vote was taken discouraged many from attending. The opportunity for non-faculty members to express themselves in a larger meeting on this complicated issue. Perhaps everyone not in attendance has made his decision concerning this issue. Hopefully not, for this would indicate a degree of polarization on campus much greater than many realize. Most likely, the Silent Majority has had its fill of the whole question and would prefer that others make the decisions.

Of the possible reasons this is the most omin- ous. And it has been reminded that the fact that one takes a side on something constitutes a political action in itself.

When the faculty votes on the resolutions in the only opportunity they will have this year for a vote on this issue on March 16 there will undoubtedly be a full house. The decisions that are reached will affect us all. Let us hope that the decisions reached are those generated by an informed faculty.

Letters to The Tech

Alumni Reaction

(Writer's note: The following are letters received by President Johnson in reaction to the recommendations of the President's Office.)

Dear President Johnson:

I have just received a copy of yours letter and I wish to make several comments.

First, I congratulate you on your decision to expel Mr. Alpert. This was the only action against the identified protesters for the crimes they committed. And I hope we support the enforcement of strict disciplinary action against those who initiate the use of physical force on campus.

But this brings me to my second point. Why were the Special Students allowed to stay in the house? When you requested our report, you implied thatMIT police action was not taken be- cause of the necessity for careful consideration of the cost of such action to the MIT community.

"Saying that MIT community" consists of only those people who are willing to engage in it, and it becomes easy for the government to turn the public's support is eroded. It is simply not good sense to come alienated and the necessary broad base of antiwar actions. Otherwise too many people be- 

In any case, the "movement" has become an either-or mentality: legal non-violent demonstrations, or illegal violent activities. There are other, and if people really want to end the war, they should consider using a little imagination in the process.

How to bring this pressure to bear will be the
topic before the conference called in Cleveland by the Student Mobilization Committee, which con- 

It is of course grass of which we speak. Who could imagine they would freak out in Riverside, N.J.? (Or Burlington, Rancocas, Delancey, Elmer and other back hick towns, including Camden, which at population 107,000 is never- theless a back hick.) Nothing is as new or as recent or as far away as a clandestine headship to arrive here and learn that all "less we ever read about here is marija- 

I am not now and never have been a member of..." Never mind. Just tell me who you're talking to. Oh, your brother or you cousin?"

I think the millennium has not yet arrived. You can't speak into my brother's house for a few talks with friends. There is more, that's for sure, not since my brother showed me his stethoscope and took me to the couple of ovens.

Across the Harvard Bridge these days, you may get into a car reeking, reeking of aw dope. Driver says, "I'm headed into a car reeking, reeking of aw dope. Driver says, "I'm headed into a car reeking, reeking of aw dope. Driver says, "I'm headed into a car reeking, reeking of aw dope. Driver says, "I'm headed..."

Perhaps one of the greatest allures for the MIT student enrolled at Wellesley is the ability to exchange the sterile, vertically rising concrete of the Institute and its urban environment for the serenity and understated splendor of the Wellesley campus. In a sense, the ride to Wellesley is an escape: an escape from the frantic pace engendered by MIT's fierce intensity; an escape from a largely impersonal world to a smaller, more comprehensible one; an escape to a relaxed haven.

One is reminded of an F. Scott Fitzgerald novel after first seeing the school: Neo-gothic architecture; lecture halls guarded by gargoyles; a lake crossed by crew teams and lovers' glances. Wellesley legends maintain that if a boy walks a girl around Lake Waban three times without proposing marriage to her, she may throw him into the lake. Very few prospective suitors appear to have been immersed over the years; perhaps the natural beauty of the campus and the blandishments of Wellesley's sirens have fatally weakened many a bachelor's resistance. But, then again, they haven't dragged the lake lately.
Sargent blocks study of Inner Belt routes

Cambridge opponents of the controversial Inner Belt highway won a major victory in their long-time struggle Wednesday night as Governor Francis Sargent announced a significant reversal of the state's transportation policy. The Governor cancelled a proposed $5.5 million, 18 month study of the hotly-debated Cambridge route. Sargent declared that the study would only have studied where the highway would go, not whether it was necessary of desirable.

Asserting that the policy reversal was following the recommendations of a task force headed by MIT Professor Alan Altschuler (XVII), Sargent said that it was now apparent that highways were not meeting the needs of the people and were too costly in terms of homes and the environment.

Declaring that the state's action would be the first of its kind in the nation, the Governor announced his hope for a "balanced transportation development program." Studies will be sized at if, not where, highways are necessary. Sargent said that he will go to Washington in an attempt to change the emphasis in current federal funding; he will ask that the funds which have gone predominantly for mass transit, upgrading of existing highways should also go for mass transit, upgrading of existing highways.

SMC to Consider Broader Actions

(Continued from page 1) groups, conversion of the antiwar movement into a multi-issue movement; and support of peace candidates in this year's elections.

Contention expected

The question of political support for peace candidates has sharply split the antiwar movement in the past, as has the issue of civil disobedience. These two matters in particular, are likely to be hotly debated, according to the SMC, and there is some possibility that a split may develop in the conference over them.

That a split will develop is by no means certain, the SMC told The Tech but the possibility is significant. Gatering agreements expected, however, on the desirability of mass actions.

Chance of Disruption

Although the atmosphere in which the meeting is being held has been generally receptive, fear of possible actions by the Weatherman faction of SDS have led to rather extensive security precautions.

MIT to develop Simplex property

By Bob Dennis

Wadleigh's presentation was largely based on a recently completed report by the Simplex Advisory Committee, a nine member group of faculty and administration whose main task was to recommend means of developing the ninetern acre site north of West Campus that the Institute agreed to purchase last July.

The original rules for development called for about half the site to be sold to a commercial or industrial organization in order to add to city tax revenues, provide additional employment opportunities over a broad range of skills, and hopefully reduce the net cost of the remaining land to permit construction at reasonable densities. Most of the remaining property would be developed commercially for tax-exempt residences for MIT faculty and other Institute personnel, thus reducing pressures on the existing Cambridge housing stock. No part of the site would be used for tax-exempt academic or research expansion.

The Advisory Committee has been meeting regularly since October and developing broad planning criteria from which specific implementation plans may be drawn. The committee hopes to complete its recommendations this month and propose a plan of implementation. In its report, the Committee notes that the Simplex property is presently "the only land resource available to MIT with the acreage and development capacity to absorb a large quantity of the additional housing required for faculty and staff."

Regardless of the specific development that occurs, the Committee concluded that "the Institute should favor prospective commercial developers who indicate a willingness to cooperate with both MIT and the city in terms of achieving the social and environmental objectives of this area in addition to the economic objectives."
VP Hill promises flexibility on Lab policy

By Lee Giguere
Professor Albert G. Hill, of the Department of Physics, the newly appointed Vice President for research, states he will "completely flexibly" in determining the future course of MIT's Special Laboratories.

Hill feels that there is a large pool of talent both within and without the labs who will leave, but affirmed that he had an open mind on the subject. He foresees the possibility of anything from disinterested to staffing the labs to the same extent as the past.

A special committee has been set up to help Hill study the advantages and disadvantages of all possible arrangements between the labs and the Institute. Working with him will be Dr. Draper and Miller and several members of the lab's President Johnson has stated, in a memo to members of the Draper Laboratories, that no decision has yet been made and that it will not be made without "appropriate discussions with members of the Laboratory."

New Post

The newly created post of economics will be filled by the Vice President for Special Laboratories and the Vice President for Research. Positions previously held by the Special Laboratories and the Vice President for Research will be merged.

Professor Hill sees himself as a "mediator" between the labs and the Institute in the same position as that of the lab's President Johnson. He noted that the labs rested heavily on availability of the labs, and it is not "economically viable" to change the labs now, but that both labs are honestly seeking new work.

Prof. Hill said he saw no reason why the number of students at the labs couldn't go up. Feeling that both labs can be more open, he noted that security regulations haven't been looked at hard enough. An honor system at the Lincoln Lab, enabling unceremonious students to work there as long as they promised to stay out of security areas, was cited by Hill. He also plans to encourage professors to take their students to the labs, as well as placing an increased emphasis on the idea that the labs be regarded as an extension of the engineering school.

COUNSELORS WANTED: Over 20, for unique space-age summer camp in Pennsylvania. To assist in instructing children interested in science and engineering, programming, or marketing. Sign up at your placement office.

Engineers, Math and Science Majors

IBM will be interviewing on campus Feb. 23, 24

Venceremos

Some 65 young radicals, members of the Cuba-bound Venceremos Brigade, mustered in the MIT Student Center Tuesday before leaving on buses to Canada at 5 p.m.

The brigades, organized by American radical groups such as SSO, sends members to Cuba to help cut sugar cane and develop cadre spirit in the traditions of the Cuban Revolution. Bragades live in communal dwellings supplied by the Cuban Government and work long hours cutting cane. The Cuban government in trying to have a record harvest of ten million tons this year, much of it is to be sold abroad to help the flagging Cuban economy.

The 65 that mustered here left in seven buses that had arrived bearing other brigades from all parts of the country, including one from San Francisco. They are bound for St. Louis, New Brunswick, where an estimated 500 will board a Cuban cattle freighter carrying 212 returning Americans according to the Boston Globe. They are to sail by the end of this week.

The trip to Canada was necessitated by State Department regulations which prohibit trying to force the organism to change faster than it is able to change by trying to force the organism to be damaged or destroyed. The time scale of change at the labs must be measured in years rather than months, he felt, and the ideas discussed on campus have no reality except as long term programs.

Solutions need time

Predicting that with time, all the problems can be resolved and the labs be brought into the community, Ruina noted that "they're a lot different now than they were ten years ago and they'll be a lot different in ten years." He commented that the new post of Vice President for Research is consistent with the interest of the community in bringing the labs closer to it.

Both Hill and Ruina noted that the possibility of converting the labs rested heavily on available funding. Hill stated that it is not "economically viable" to change the labs now, but that both labs are honestly seeking new work.

Revolution hits Wellesley?

A movement has started at Wellesley College. Students there are beginning to show their disenchantment with the school atmosphere at the Colle-
gate began to show their dis, tors held to gather this grass-

Several students, including Barbara Baumburger '70, Judy Scott '71, Louise Kasdon '72, and Anne Shear '73, met at Wellesley from January 30 to February 1 (the last weekend of their intersession) to discuss what they termed a crisis at the Wellesley Community by the Renaissance '70 people.

On February 1 Renaissance distributed to several administration people. "It also has faculty support, as many students with I.D., $5.00. Make checks payable to MWTHumanities Series."

"The above needs were explained in a two page pamphlet distributed throughout the Wellesley Campus by the Renaissance '70 people."

"On Thursday, February 4, an all college meeting was called at which 200 were present. The originators of the movement explained themselves and re-read a series of "crisis meetings" for the next couple of weeks. Included all-college meetings and the above-mentioned briefing sessions. They requested that people present to spread the word."

Last Monday the first of the crisis meetings took place, drawing 1100 students (out of 1750). The Renaissance women spoke at the meeting, as did the Director of Educational and Community Services, Ms. Polk. Most of the discussion concerned itself with the obvious demonstration of student support and interest by the student body that the meeting represented, and the fact that something more than a perfunctory might have to be re-ported to. The speakers said that the administration had been asked to produce, by March 1, a report on what it planned to do about the situation. An al-

Academic reforms desired included: new open courses, greater student design of the courses, and more freedom to take terms exams, special summer institutes, etc. Other proposals are implemented; There have been requests for, among other things: an end to the distribution requirements (three distribution-wide credits). More freedom to take terms exams, special summer institutes. The above needs were expressed in a two-page pamphlet distributed throughout the Wellesley Campus by the Renaissance '70 people.

When you ski Stowe, you have the run of Vermont's Magnifi-
cent high speed Gondola plus many other fine lift facilities. Check into our runs, snow-making equipment. Lively apres-
ski. 70
day/7 week ski packages available.

range an appointment with the Xerox representative.

Interactive Lectures on Astronomy

Freshmen with curiosity about astronomy but no great knowledge of the subject are invited to use an experimental system containing recorded lectures plus answers to questions that may arise while listening. If you would like to try the system, please write a short note to Stewart Wilson, Polaroid Corp., 730 Main Street, Cambridge (near MIT), stating your prospective MIT course, the hours you are free, and how you can be reached.

1970 GRADUATES:
Master of Science Industrial Administration
XEROX IS COMING TO CAMPUS
FRIDAY, FEB. 20

presents
Bootham Bi-Centennial
J. Scott Noll, Keefe Piano Trio
March 1
All concerts at 8:00 p.m. in Kresge Auditorium. Tickets: $5.00. M.I.T.

Facility Lab resolutions

WHITE NOT SERVED

SUMMONS BY COURT

(Continued from page 1)

the Congress of the United States to discontinue the development of high-accuracy missiles.

The motion presented by Professor Low drew the most vociferous discussion. Many members of the faculty objected to the fact that MIT has been involved in the manufacture of nuclear weapons. Professor Vander Velde pointed out that the motion should be submited to the Corporation, the only entity competent to express MIT's policies in foreign affairs. The motion was voted down.

TEACHERS NEEDED

Teaching opportunities for beginning and experienced candidates in private schools throughout the country. Education courses not required. Write.

Now an avid and analytical observer of human nature in New York City, Arthur Sammler is an agent of the United States Department of Labor. He is a character destined to take his place in our language along with his literary predecessor, Herzog.

In his search for "what is normal for human life," Sammler has many to study: his daughter who communicates chaos, the elegant black man who is a disdainful pickpocket; Dr. Lai, an Indian communicates chaos; the elegant black man who is an ex-journalist from London. He is a new revel?

In his search for "what is normal for human life", his questions are: who is asking, "What is normal for human life?" What is the answer to these complex problems.

Truth is, it would be comparatively easy. But we want somebody with more than a pat answer for everything.

Want to volunteer for the Boston School Volunteers? Come down to 16 Arlington Street, Boston. Or call Mrs. Beck at 449-2819 except Monday evenings.

MIRVs."

The following were formally charged with criminal trespass at the pretrial hearing: Professor Vander Veide of Aeronautics which called for continuing our present policy with respect to the Laboratory with those Pounds Panel's findings and the statement of the Corporation supporting those findings. Professor Vander Veide presented the motion that the fact that MIT has been institutionally involved with MIRV 'gives it the right to take such a stand on National policy.'

The final motion was from Professor Vander Veide of Aeronautics which called for continuing our present policy with respect to the Laboratory with those Pounds Panel's findings and the statement of the Corporation supporting those findings.

The motion concluded with the reminder that any other motions for faculty consideration on this issue should be submitted no later than February 17.

FOR SALE:

39,000 miles. Only 25,000 miles on the MIRV. Only 25,000 miles on the MIRV.

The motion was voted down.

* Want to volunteer for the Boston School Volunteers? Come down to 16 Arlington Street, Boston. Or call Mrs. Beck at 449-2819 except Monday evenings.

* The Nominations Committee is seeking students to fill openings on the following committees: Committee on Curriculum (1 junior), Corporation Joint Advisory Committee (1), Committee on Library (1), Committee on Discipline (1), Job Training Committee (1), Commencement Committee (1 junior).

The MIT wrestling team, under the guidance of Coach Art Farnham, had a successful weekend. The team faced off against Tufts University, and although the score was 42-30 in favor of MIT, the competition was tough. The freshmen wrestlers had a good showing, with one-two finishes in the shot put. Walt Moore and Steve Bielagus went on to set records in the pole vault, clearing the crossbar at 19'/2" and 19'/2" respectively, and the men's broad jump. Terry Blumer, after placing third in the high jump, secured a first in the pole vault, and Tom Pilla, a solid 25-12 win. The Techmen placed second and third in the 1000. MIT won the final event, the shuttle run. The freshmen wrestlers had a composite effort, winning with a 4-0 lead through two periods and 1:45 of the third to pin their opponent. The score now stood at both 126 lbs. and at 134 lbs., giving the Techmen a victory. With the score now 34-7, although an improperly called technical foul cost the team roughly 30 points. The next day at Annapolis, the Midshipmen were completely outclassed by an excellent Villanova team, which fell 3340-3276. The Tech pistol team, perhaps the best ever, pushed its season record ahead over intersession and set a longevity record with wins over Villanova, the University of Pennsylvania, and-and-against contact the IM office, 7 pm.

Tech matmen trounce Tufts

by Don Arkin

The MIT wrestling team rolled over Tufts by a convincing 35-6 Wednesday night in DuPont. The strong showing was highlighted by five pins scored by Tech wrestlers.

Ted Mita '71 started off with the inspiration for Tech by pinning his opponent after only 1:35 in the 150 lb. class. Monty Cindermen, swimmers romp
