Gains of 60s aren't enough, Bond says

By Gerald Radack

Despite the gains of the sixties, the relative position of the blacks and poor in American society has not improved, Georgia State Senator Julian Bond told an audience at Harvard University Sunday night.

In a talk on the issues of the 1976 presidential campaign, Bond, a black, cited a wide range of problems in contemporary American society - housing of children rather than education - to survive for blacks.

To solve America's problems, Bond proposed a "national coalition of need," made up of "parents who don't want warehousing for their children, people who work but can't live on what they make," and others.

Among the reforms needed, Bond stated, are taxes "to reduce the disparity between the haves and the have nots." For a program of full employment, for "vocational as well as academic education," for national health care "paid for by the treasury, not by insurance companies out of the pockets of the working poor," and for "supportive, non-academic research" to apply that understanding to the real world.

Bond said that the "new federalism," promulgated by President Nixon and Ford, "promised to be a mess when it was first conceived," and that if the administration does not "accept the benefits of nuclear power generation, the future of nuclear power is in danger," he warned.

Industry 'pull' used to cancel E-Lab's methanol research?

By Mike McNamee

Gasoline and alcohol have mixed at the MIT Energy Laboratory to ignite a hot debate over whether the Lab has yielded to pressures from the oil and automobile industries to allow promising research into alternative auto fuels.

A "News and Comment" article in the latest issue of Understanding Science, which has grown up over Lab Director David White's cancellation of a research project involving use of methanol (or alcohol) as an auto fuel, and hints that pressure from Exxon and Ford Motor Company caused the lab.

Lincoln Lab scientist Thomas Reed is quoted in the article as saying that $100,000 of $100,000 Energy Lab grant be cancelled, for his research on gelling methanol-mixture fuels was "removed from his account just before White cancelled an extensive fleet test of Reed's fuel mixtures in students' and faculty's cars."

And Reed says he believes "industrial opposition" from Ford and Exxon, each of which gave the Lab a $500,000 unrestricted grant about eight months ago "to the fleet test and to the credibility it would have given methanol fuels played, in my opinion, a major role in the program's cancellation."

Neither Reed nor White calls the Science article "very evenhanded and accurate," nor White will discuss the controversy. Reed, White has released a letter which he is sending to the editor of MIT, however, in which he "rejoices as utterly false a charge that (methanol research) has been ended and that such terminations came at the fag end of the oil and auto industries."

Although the article only reiterates the project - Reed's being cancelled, White explains that the Departments of Chemical and Mechanical Engineering, as well as the Labs, "have active research projects involving methanol and the fleet test was cancelled for a number of practical and technical reasons, charging that Reed's fleet test methodology was inadequate and his experience in the field is insufficient."

White also says that the $100,000 grant which Reed was working with was for general research on methanol, and that Reed had not asked for the money on his research while he was working half-time at the Energy Laboratory. Reed is awaiting his final report, White says.

Regardless of whose set of recollections is correct, the Science article has raised questions about the influence of industries in the laboratory by pointing out that seven of the 24 members of the Lab's advisory board are oil and auto industry people, and that most of MIT's lab money on E-Lab research without the Lab is industry-sponsored. The article specifically charges that an Exxon scientist was on MIT. Visiting Professor John P. Longwell, was involved in the "precipitating event" that "entered into the debate."

The Lab has lost at least $50,000 as a result of the controversy. Reed told Science that "rather than risk a repeat of the whole affair," he returned a check for $50,000 of more research money from the Minnesota oilman who gave his $50,000 grant - an action of which White said he was "shocked" to learn.

No investigation of the Science charges has been planned by MIT.

Federal actions hurt an already grim scene

Research cut coming?

By Mike McNamee

The federal government is considering changes in accounting procedures for college and university research contracts that might cost the institutions one-third to one-half of the money they receive for overhead support.

The Department of Health, Education and Welfare is circulating proposed revisions in the 30-year-old system of research funding that allows colleges and universities to charge part of their overhead - library costs, building maintenance, student stipends, and administration - to the federal contracts.

Research-oriented institutions like MIT, which draws half of its $240-million budget from direct and indirect research funds, would lose up to half of the money they are now recharging for research overhead - a loss with severe consequences for those institutions' strained budgets.

Although no complete accounting has been carried out at the Institute yet, Vice President for Research Thomas Jones told The Tech that MIT would stand to lose at least $8 million of the $24 million overhead it receives from the federal government.

And since the cuts would have their heaviest effect on libraries and financial aid - two indispensable items, the effect would be doubled if MIT attempted to take up the slack.

(Please turn to page 2)
$8M at stake for MIT in research change

(Continued from page 1)

The indirect-cost accounting system is the result of years of negotiation and accommodation between the major college contractors and the government agencies they dealt with. Since all contracts are voluntary on the part of both partners, the government cannot unilaterally change the cost-allocation system. "It will not work if MIT can get anything this sweeping in," a Defense Department auditing official told The Tech.

But the bargaining table runs to the government's side, since many institutions - smaller colleges with less research clout - will happily accept an agreement with smaller overhead payments. The big institutions are concerned, and their Washington representatives - the National Association of College and University Business Officers (NACUBO) and the American Council on Education (ACE) - are joining forces to fight the HEW proposal.

Contracts with the federal government - and, following that precedent, with most private contractors - specify that a certain percentage of the direct costs - salaries and materials - must be paid to cover indirect costs. The percentage is reached by negotiation between the government and individual institutions on the basis of "broad, school-wide averages," Jones said. MIT's current rate is about 58 percent, which means that a salary-only contract breaks down at 65 percent salary and 33 percent overhead.

The changes have come because of basic shifts within the government research systems, according to Paul V. Cusick, Vice President for Fiscal Relations. The Department of Defense, once far and away the biggest federal contractor, has been supplanted by HEW, and so major rule-making authority has flowed to HEW, which now audits only five of the 200 main institutions, to HEW, which audits 180 schools.

"When it was decided that the agency with the most contracts should be the trend-setting agency," Cusick explained, "HEW wasn't ready for it. They didn't have the staff to cope. They had to go into industry to get accountants and

Gray paints bleak budget picture for MIT

(Continued from page 1)

standing of the Institute's budget dynamics, Gray presented a bleak picture for the immediate future. By the end of fiscal year 1976 (FY76, which ends next June) Gray predicted the MIT administration's primary concerns will be having to pay for an enormous deficit and unable to reach any reasonable agreement with the government on the cost-allocation system, which will please colleges and universities.

Gray explained that gaps in available funds are due to three years of deficits. As Gray explained, the operating gap is paid out of three funds:

- Research Reserve, which now stands at about $4 million, was used in FY76 for 74 percent of the deficit.
- An Endowment Fund, a collection of unrestricted gifts and gifts made on a one-time basis to help fund the operating deficit.
- Funds Functioning as Endowment, gifts from previous years that were designated to be used as capital but, due to the deficit, were diverted.

Use of $14 million in funds which would have been available for investment means the Institute will forego $700,000 in income each year, Gray said. This immediate reduction of operating income provides a powerful incentive to reduce our research expenditures," the chancellor said. "Clearly, we must, in the long run, operate in a way that we add to, rather than draw down, these crucial resources.

But Gray said that the current and future operating deficits themselves were not the administration's primary concerns. Instead, the "dynamic forces" that tend to "push budgeted budgets out of balance and make deficits grow from year to year. That "derivative of the deficit," Gray explained, "is a major constraint for the Institute."

"In simplest terms," Gray explained, "this problem arises because two components of revenue - investment income and gift income - have not grown at rates which match the rate of growth of inflation-driven expenses."
The result, Gray said, is to make the operating deficit grow exponentially.

The historical reason for the imbalance, Gray said, was based in the 10 percent per year growth rate of the Institute throughout the 1950s and 1960s. That growth, he said, marked the imbalance and made total budgeting and cost accounting very difficult. When deficits occurred, "once-time measures" such as tuition increases could be used to put the budget back in balance. The sudden stop in growth experienced at MIT and elsewhere coupled with increased difficulty in getting research funds and more specifically support for indirect research costs, started "a budgetary spiral," Gray said. "It took a year or two to realize what was happening," he explained.

The Institute's efforts to handle this problem, Gray said, have already resulted in $2.7 billion in gross reductions between 1971 and present. Further reductions "are increasingly painful," the chancellor said, and so measures to increase income are going to have to be relied upon to ease the deficit.

To do so, Gray proposed six points:

- Holding a tight rein on salary and wage changes, with an average increase "much smaller" than FY 75's 9 percent.
- Reductions in academic and support programs aimed at a net decrease of $2 to $3.5 million in fiscal 1977 - a decrease in the HEW-regulated items which would not require gross cuts of $3 to $6 million.
- A 5 to 8 percent increase in tuition.
- An enrollment increase of 100 to 200 students each year, evenly divided between graduate and undergraduate, until enrollment is about 10,000 more than 1974-75.
- Generation of about $800,000 in new funds for present programs in the MIT Leadership Campaign fund drive.
- An increase in investment income by beating earnings on endowments.

The result of the immediate budgeting, Gray said, mean that FY77 will "almost certainly" be another deficit year, with balanced budgets in FY 78 and a slight surplus in FY 79.

"Enough strong stuff to keep audiences both gasping and wide-eyed... Raw slices of life... A marvel throughout!.."

"It is a Sinful Song"

"Remarkable...this film could well have been made by Ingmar Bergman."

Pedestrians who have noticed the problems Institute construction is giving drivers on Memorial Drive won't be laughing in a few days when building work starts to affect them. City workers have torn up the Drive (above) between the Sailing Pavilion and Walker Memorial to install sewer, water, and power lines as a first step in the renovation and expansion of the Pavilion. Superintendent of Construction Paul Barrett says the $15,000 utility work is being paid for by MIT. Walkers can't gloat, however, since they're going to face traffic problems when final landscaping around the new Chemical Engineering Building (left) forces closing the walkway between East Campus and the new facility. Barrett says the landscaping is the final step before Chemical Engineering moves into the building.

WANTED: MALE SUBJECTS, Age 18-30 for serious experiment in pulmonary physiology. Two groups needed: one, no medical problems at all; two, definite bronchial asthma. Must be able to spend 3 hours in lab on 4 occasions. Safe, pleasant experiment. MIT pays $5.00 per hour. Call B.U. MED. 262-4200 Ext. 6436. Ask for Susan.

**Letters to the Tech Ad Objections**

**To the Editor:**

The Tech joined all the other campus newspapers last week (Oct. 28) and printed a lead article "based on these biased reports" written by Jon Horn, another fellow applicant decided he "deserved what he got." The appearance of advertisements in a newspaper controlled by people certainly does say something about the views and standards of those people, and I imply consent for or at least indifference toward the advertised product on the part of the editors, managers, and/or advertisers. Further, I do not think the readers accept even if the editors do not. Dasheikoff, one of the managing editors of The Tech approve of or not care about the issues presented by the content of the ad (e.g., that women are seen as "pleasure machines" and the ad itself)? If the answer to that question is affirmative, then I charge that The Tech is not living up to its professional responsibilities.

Peter Farrell "77

To the Editor:

In responding to the objection foreword to The Tech, you seem to be missing the point of the objection, basing your argument on some very weak premise. First of all, you assume that condoms are no different from other products and that therefore any product that is advertised in The Tech should advertise them just as it would anything else. This clearly has to be an error of judgment. Almost any of your readers could tell you that there are different types of condoms, just as there are other products, and that is why most professional newspapers do not run ads for them. More importantly, objective morality (and yes) easily differentiates condoms from other products.

Your defense that The Tech would be less professional if it doesn't run ads is fallacious. In fact, it is one minority taking offense is secondary to the main objection, but I don't think The Tech would run just any ad. For instance, you could accept an ad for a private club for whites only? Would you run ads for a non-Nazi, non-segregated Boston public schools?

The appearance of advertisements in a newspaper controlled by people certainly does say something about the views and standards of those people, and I imply consent for or at least indifference toward the advertised product on the part of the editors, managers, and/or advertisers. Further, I do not think the readers accept even if the editors do not. Dasheikoff, one of the managing editors of The Tech approve of or not care about the issues presented by the content of the ad (e.g., that women are seen as "pleasure machines" and the ad itself)? **Racism in the Middle East**

By Rami Mangoubi

The recent UN General Assembly resolution declaring Zionism a form of racism is but one in a series of Arab steps intended to set the stage for the destruction of Israel. The acceptance of this resolution, heralds a new era in international morality in which oppressive and discriminatory practices are no longer condoned. Perhaps most ominous, this trend indicates a new determination by the Arabs to take all means to bring about the destruction of the state of Israel.

The underlying issue in the Middle East is indeed racism. The persistent Arab attack on Israel is but one manifestation of a widespread understanding among many Arabs that the only method of destroying Israel is to deny it the right to exist. Perhaps most grotesque is the Arab decision to accept this method of destroying Israel as a form of racism.

Middle East racists: Arabs or Zionists? (Continued from page 4)

led Egypt's rear behind their possessions and were denied compensation. But we are told that Egypt is a moderate country. Moderate in comparison to what? To Israel, whose innocent Jews were taken from their homes and hanged in the main square from trees up the Tigris to Baghdad?

So much for the Arabs opposing Zionists but not Jews. But where then does Zionism fit into the picture? Zionism is the National Jewish movement whose purpose is the restoration of National Jewish sovereignty in the land of Israel, the historical homeland for which the Jews struggled for over two millennia.

In fact, one of the main goals and achievements of Zionism, embodied in the Law of Return, is the rescue of Jewish refugees expelled from Arab countries. These refugees comprise more than half of Israel's population. It is ironic that the Arabs attacked this law as "racist" when its principal provision is intended to rescue the victims of their own intolerance and racism.

The Arabs' strategy is to vilify Zionism to such an extent that the destruction of Israel will be perceived by the West as the real act. If Israel is truly to be combated, this decade, it is in the heart of the Arab world that one should start. But with the combined power of the new oil weapon and the indiscriminate use of terror, the Arabs have successfully turned the UN into a Kafkaesque tribunal where the criminal is prosecuting the victim.

The consequence is the virtual elimination of such as Israel. Blashnev and Muammar Qadafi can judge people like Albert Einstein and Martin Buber - both active passionate Zionists - incorrectly. At stake in the race between anti-Semitic destruction and Zionist reconstruction is the entire moral fabric of free democratic society.

ASA Impeachment (Continued from page 4)

September proves his real, honest interest in activities. His work toward civil engineering and law degrees would have provided ample excuse. Forret's real crime was trying to do more work than the ASA president before him. The greedy moves - and some people claim I should be the one to know! - didn't belong to Forrest, but to the groups which were afraid that he would give their activity space to a more deserving activity, and to the others who saw an opportunity in a weaker and more manipulable president.

McNamer said: "... if the community sees in the greatness of the 'leaders' of a few activities which have convinced themselves of the power and authority - activities with no one to blame for their decline but themselves." No one really knows how many went off in the minds of the students at the meeting, but the activities will continue to decline until their leaders, including those of The Tech, begin to fairly present both sides of an issue.

(The Tech's reporter attempted to contact Knitter and other persons involved in the impeachment - before his story was written, but his calls were not returned. With regards to the procedural points Wootton mentioned, here: The Tech attempted to get a copy of the minutes of the impeachment meeting, it was told they were not available and might not be made public. - Editor)

Stir up something tempting with Apple Jack.

If Adam and Eve were tempted by only one big, round, juicy delicious apple, think how tempting things can happen with 20 of them!

That's how many whole, tree-ripened apples go into every fifth of Laird's Apple Jack. And what comes out of it is a pure pleasure. That subtle hint of apple that comes through naturally in every sip.

Apple Jack over ice in a highball glass. Up. Add a slice of lemon or lime. That's how many whole, tree-ripened apples go into every fifth of Laird's Apple Jack. And what comes out of it is a pure pleasure. That subtle hint of apple that comes through naturally in every sip.

Here are just a few.

Jack Rose. One jigger lemon juice, 1 jigger grenadine, 2 jiggers Laird's Apple Jack, Shaken with ice; strain into cocktail glass.

Big Apple. Pour one jigger Laird's Apple Jack into a highball glass, over ice. Fill with 7-Up. Add a slice of lemon or lime.

Coke & Apple. 1 jigger Laird's Apple Jack over ice in a highball glass. Add coke and a twist.

Maybe Adam and Eve didn't do right by the apple, but you won't go wrong with Laird's Apple Jack. (Send for your free recipe booklet: Laird & Company, P.O. Box 5077, N.Y. 10028)
Police Blotter

(The Police Blotter is a report written by the Campus Patrol on crimes, incidents and actions on the MIT campus each week.)

Armed Gang Hits Area Campuses

As was reported in the Nov. 14 edition, a ring of armed thieves has been plaguing this area's campuses. Although they have not appeared at MIT, it still behooves the community—especially on-campus residents—to be on guard against them.

Their method is to offer to sell narcotics to potential buyers, agree and produce firearms and force the transactions. The thieves are three in number, although at times a fourth accomplice is present. All are male and range in age from mid-twenties to one man who seems to be in his mid-forties.

They are travelling, at last report, in a gold colored late model car, probably an Oldsmobile Delta 88 bearing temporary registration plates from Florida. Anyone having any contact with these men should exercise extreme caution and notify the police as soon as possible. These men are reportedly heavily armed and should be considered to be extremely dangerous.

Armed Gang Hits Area Campuses

(Page 6)

What price happiness?

$249 More than anything else you could buy yourself for the Holidays, a good music system will make you very happy.

And, happily, the price can be less than a color tv. Especially right now, during Tech Hifi's Holiday Sale.

Take one of our $249 systems, for example. You'll hear more accurate sound reproduction from our quality components, than from any "compact" or "furniture console" near its price.

The $249 system shown here includes the Cambridge Audio 1500 am/fm stereo receiver, two KLH acoustic-suspension loudspeakers, and the light tracking Gemini 2108 automatic turntable equipped with a Shure Magnetics cartridge. (Our Holiday Sale price of $249 is $40 below our Buyers' Guide price!)

Other systems are on sale this week starting as low as $199. And up to $3500.

$503 At Tech Hifi you can select from among 100 name-brand components! One example of the kind of quality system you can put together for $500 is shown in the picture above. It features the renowned Large Advent loudspeakers. According to High Fidelity: "Yup the audible range with ease and authority lending virtual no coloration to the music..."

The power for this system is supplied by a Kenwood 2400 am/fm stereo receiver. And the Kenwood gives you the kind of clean FM reception that makes listening to the radio such a pleasure.

The turntable is a Philips GA 427 belt-drive semi-automatic. It comes with an Audio-technica 90E Dual Magnet cartridge that makes your records sound great, with minimum wear.

You'll find our holiday spirit is strong during our Holiday Sale that we'll include a pair of stereo headphones when you purchase this system! (This offer expires this Sunday).

Free The 1976 Hifi Buyer's Guide is now at the Tech Hifi store near you. It contains 80 pages of helpful shopping tips, explanations of technical aspects of high fidelity, and new product information.

You'll find a 10 page article on the creative uses of tape recorders.

There are money-saving coupons, good for discounts on loudspeakers, headphones tape, and accessories.

If you have any notion at all of getting yourself a music system for the holidays, be sure to get your free copy of this fact-filled shopping guide.
Nuke power: accept the risks?

(Continued from page 1)

The Nuclear Debate: Basic Issues for 1976

rectify the problems that occur.

"We have developed a technology that carries a significant advantage," Rasmussen told a nuclear industry meeting in Boston last month. "But we are being forced to modify it and modify it until the paradoxes economics outweigh the advantages. Society must decide what level of risk it will accept, and then set the standards and live with its decisions."

How can the risk level be set, the opponents say, if the data isn't all in and the costs aren't yet known? And aren't the modifications and delays which Rasmussen complains of a small price to pay if the risks turn out to be larger than expected?

The difference is an example of one of the basic splits in society today, the split between those who favor progress however it comes and those who want to take a second look at technological advances before they are implemented to see what effects they will have. While the split is not as black-and-white as that - the nuclear industry, for example, has worked hard to test and develop reactors safely - the advocates and opponents clearly fall into those two classes.

Man may conquer the air, but the birds will lose their wonder and the clouds will smell of gasoline. Similarly, the conquest of nuclear power will carry some risks and some drawbacks. Whether society decides to accept those risks will determine whether nuclear power will be the energy source of the future.

Bond: black equality is off

(Continued from page 1)

By James I. Bond

When asked which candidate he supported, Bond said it was too early for him to make a decision because it is too early to see who is running, but he listed Democrats Birch Bayh, Fred Harris, Harris W. Udall, and Senator Skates as possibilities, adding, "I am particularly fond of Harris. Those four, he said, "have been on the side of right more often than on the side of wrong" over the past 10 to 15 years.

Bond's talk was part of the Presidential Politics '76 series sponsored by the Citizens for Participation in Political Action. Bond, who has been a Georgia State Senator since 1965, entered the presidential contest earlier this year, but was forced to withdraw when he ran short of funds.

Based on his experience as a candidate, Bond said, he has decided that "the Campaign Reform Act serves primarily to protect incumbents." The bill, which sets a $1,000 maximum on the amount a person can contribute to a campaign, was vetoed by the current Speaker of the House, and had the standards and lived with its decisions.

Memorial Drive parking to be limited this winter

Parking on Memorial Drive west of Massachusetts Avenue will be restricted on an intersession basis this winter as Cambridge plans for extensive renovations.

The MIT Physical Plant Construction Office said the city is planning to resurface Memorial Drive next spring and summer, raising the road surface two to three inches. To accommodate that resurfacing, cars along the road must be raised.

The contractor has decided to start on the river side of the Drive during the winter, and hopes to complete work on those curbs by spring. The work will be intermittent, however, and so parking along that side "will all depend on what the weather is like and whether they'll be working," a Physical Plant official told The Tech.

Cars on both sides of Memorial Drive were being towed last week as contractors cleared the street for preparatory work. A cut must be made through the pavement about a foot from the curb to loosen the cuts for removal. Those cuts have been made, and parking on the campus side of the street will be restored soon, Physical Plant said.

The Physical Plant spokesman, who said he had discussed the work with the contractor, said he couldn't explain why the work was being started in November and carried out through the winter. "This is the worst time of the year for any kind of construction, as we're finding with some of our projects around campus," he said. "I don't know why they're doing it, but I expect that contractor will have some troubles with that job.'

Basketball falls to Acadia, 51-44

By Glenn Brownstein

After a 10-minute scoreless streak that turned a slim lead into a large deficit, MIT's varsity basketball team staged a second-half rally that fell short, dropping a 51-44 decision to Acadia College in an exhibition game Sunday night at Rockwell Cage. Acadia, despite shooting only 29% from the floor, took advantage of MIT's 29 turnovers to gain the victory.

Al Jessamy had a sensational night for the winning Canadian five, scoring 27 points, pulling down 14 rebounds and picking up eight steals. Forward Gene Saunders added nine points and nine rebounds to Acadia's total. It was a night to forget for the MIT varsity, as the Engineers committed 26 fouls, had almost 30 turnovers, and shot a very poor 35% from the floor. Last season's leading scorer, tri-captain Cam Lange '76, paced a generally lackluster effort with 13 points. Peter Jackson '76 led MIT's rebounders with 14, which included the Engineers' first nine defensive boards.

Two bright spots for MIT were tri-captain John Cavolowsky '76, who converted five of nine field goal attempts and garnered ten rebounds, and a freshman with excellent potential, John Wozniak, who tallied four points and grabbed six rebounds.

The Engineers took control of the game early, spurted to a 14-7 lead after only eight minutes. At that point, though, MIT's offense totally broke down, allowing Acadia to run off 21 consecutive points. Jessamy—scored 17 of Acadia's points during that stretch, swishing four outside jumpers, adding three layups, and putting in three of five free throws.

The Engineer defense adjusted to control Jessamy in the second half, but poor rebounding due to foul trouble (Jackson, Lange, and Cavolowsky all had four personals early in the half) allowed Acadia to compensate for its poor shooting and maintain a dwindling lead over MIT, cut to five at one point. However, the Engineers could draw no closer, and Acadia hung on for a 51-44 win.

MIT scrimmages—Bridgewater State Friday and SMU Saturday before opening up the regular season against Brandeis at the Cage Tuesday night at 8:15.

The newly organized MIT Figure Skating Club will hold its first meeting on Sunday, Nov. 30 from 1:30-3:30 pm at the MIT ice rink, weather permitting.

To join, you must own a pair of figure skates and an athletic card and be able to skate forward comfortably. Meetings will be on Sundays from 11:30-1 and most will feature mini-classes. For more info call Esther Horwich at 43-5412.

Tryouts for MIT Community League Hockey will be held from 8-11 pm on Wed., Nov. 26 and Sun. Nov. 30 at the MIT ice rink.

The Community League features high-level club play (including some intercollegiate scrimmages) and an intramural schedule that is conducted approximately twice a week. Although the league is primarily for staff and graduate students, any member of the MIT community is welcome to try out. For more info call Ken Okin at 86-3761.

SAVE THE WHALES
Don't buy Japanese or Russian products.

SAVE THE WHALE Buttons, bumper strips, and information at The Ecology Action Office

Write your congratulations in support of H Res. 448 and S Res. 81—to ban the import of 100-200 million dollars worth of fish products from these companies engaged in whaling.

WHY LIVE A LIFE WITHOUT MEANING?

Too many of us are in places we don't want to be. Doing things we really don't want to be doing, because we can't think of anything better to do—but that's no way to live.

Since you have only one life to live, you might as well live it with a feeling of satisfaction and accomplishment. The only life you are going to be living. Why not decide to live for the best— for a great purpose, for something bigger than yourself?

If you want to change the direction of your life, you might investigate the Paulist way of living. The Paulists are a small group of Catholic priests dedicated to preaching the Gospel of Christ to the American people. For over 100 years the Paulists have done this through the communication arts—books, publications, television and radio—in college campuses, in parishes, in missions in the U.S., in downtown centers, in working with young and old. Because we are flexible, we continually pioneer new approaches. To do this we need dedicated, innovative men to carry on our work.

To find out what God has chosen us to do, is one of the most important aspects of our life.

"Which road will you take?" For more information on the Paulists, fill out the coupon and mail today.
