By Leney Martin

Hillel won a controversial MIT College Bowl in Kenne Auditorium Thursday night, clipping Gallimaufry 290-280. Hillel was behind 270-260 with four minutes to play in its last, and consecutive, possible challenge to clinch the victory, as only one question remained.

There were about two minutes remaining for more questions when Master of Ceremonies Richard Reid, President of College Bowl, Inc., ran out of them. "We're sorry to have lost that way," said Gallimaufry's Jonathan Reiss '79 of the question shortage. "We were disappointed, but I'll be back next year." The stage was set for controversy before the question was even asked, with Reid informing the audience, "All my life I've wanted to come to MIT and..." (Please turn to page 7)

By Steve Sobieck and Ron Newman

MIT alum Peter Peckarsky '69 was arrested last Tuesday and charged with assault for allegedly attacking Billy Carter with a tire iron at Carter's gas station in Plains, Georgia.

Peckarsky, former staffer and Washington correspondent for The Tech through 1975, told The Tech that at the time he was investigating President Carter's finances, which are closely linked to Br-V's, and that he considers the assault charge "ongoing.

According to accounts which appeared last week in the New York Times and Washington Post, Peckarsky drove up to the Billy Carter household last Tuesday evening, at which time Mrs. Carter reportedly warned Peckarsky to get away from the house. According to Mrs. Carter, Peckarsky "shouted something" and left. When Peckarsky later arrived at the Carter gas station he encountered Billy Carter. Carter allegedly warned Peckarsky to stop bothering his wife, whereupon Peckarsky is alleged to have picked up a tire iron and started swinging at Carter. The duty officer at the Plains Police station reported: "Peckarsky came running through the police department. He said Billy had assailed him." Carter followed and accused Peckarsky of attacking him. Both were then taken to the Sumter County seat and Peckarsky was arrested and one of Carter's employees is alleged to have picked up a tire iron and started swinging at Carter.

In his sworn statement, Billy Carter also charged Peckarsky with assault and battery.

Bomb scare empties Walker dining hall

Patrons of the Walker Memorial dining hall and students in nearby activities offices were forced to evacuate the building Monday during the lunch hour because of a bomb threat.

According to Captain William M. Lyons of the Campus Patrol, an unidentified person detached a device from the ceiling of the first floor over the main station of the building and announced over the PA system that "a bomb is out here." The evacuation was orderly and smooth. A food service worker described the scene as "very low key — everyone just got out." Captain Lyons commented, "At lunch, this (the evacuation) could have been a dangerous procedure. Someone could panic... and get hurt."

After normal operations resumed, several Campus Patrol officers remained at Walker in case of further trouble. No group claimed responsibility for the bomb threat.
Some critical national problems are too important to be influenced by profit or politics. This is the reason for the creation of The Aerospace Corporation, a not-for-profit company that is part of neither industry nor government. That detachment allows Aerospace to hold scientific and technical considerations foremost in applying technology and science to solve critical national problems. To preserve objectivity, no manufacturing is performed by Aerospace. Instead, The Aerospace Corporation is a unique science and research source, performing systems planning, systems engineering, technical direction and experimentation for several National Security agencies.

High Technology

During the past decade Aerospace was involved in about 60% of U.S. space launches and over 50% of the payloads orbited. Besides space and national security, the company applies its expertise to transportation, energy systems, conservation of natural resources, law enforcement, applications of technology, and controlling environmental pollution.

Aerospace recently contributed to making nuclear power plants safe, identifying the fluorocarbon threat to Earth's ozone layer, designing lightweight body armor for policemen, and verifying the strategic arms limitation agreement.

Personal achievements

In addition to the Corporation's diversity and prestige, an Aerospace engineer monitors contractor performance and aids both customer and manufacturer in seeking solutions to technical problems as they arise. This assistance continues during the final testing of a new system and, as appropriate, after it is in operation.

Employee benefits

- Competitive salaries
- Health care coverage
- Paid dental insurance
- Paid life insurance
- Paid accident insurance
- Cost shared coverages for disability and survivor income
- Paid vacations, starting at 3 weeks during the first year
- Excellent retirement plan, entirely funded by the Company
- Tax deferred voluntary annuity/account plan

Career Growth

- Promotional opportunities to upper management
- M.S. Engineering fellowship program
- 100% tuition reimbursement program
- Graduate fellowship program featuring advanced study grants
- Interactive TV courses from the University of Southern California
- Graduate level courses conducted on-site at Aerospace

Interviews on campus Mon. Feb. 8 and Tues. Feb. 9

China decision faces reality

To the editor:
China, we must face the political realities of survival in a world which could, at any moment, erupt into a nuclear holocaust of unimaginable horror.

Today, the United States, the Soviet Union, and the rest of the world, stand on the brink of nuclear destruction. Every year sees more and more countries acquiring nuclear capability, and as the number of them increases, so does the potential for configuration. This is especially true when one thinks of the many politically unstable countries in Africa and South America. The idea of Idi Amin or similar tyrant acquiring "the bomb" is not only a grotesque possibility, but a probability that should strike terror into the heart of any sane person. As this point in time, we need every type of defense available to us in dealing with potential adversaries, of which Russia, of course, is the strongest and most feared.

A Communist China, not only friendly to us, but on diplomatic, economic, and military terms and a possible ally, is a far cry from the People's Republic of China as we know it today. We must not forget the days of 1949 when Mao Tse-tung declared war on the United States, and the days of 1971 when the United States recognized the People's Republic of China.

To the editor:

We are seeking exceptional people at all levels in electrical engineering and computer science. Successful applicants will find themselves meaningfully involved in projects related to the conceptualization, design, development, test, and manufacture of large, advanced technology computers and supporting software. Some of these projects incorporate the use of mini or micro computers.

ON CAMPUS INTERVIEWS:
Wednesday, February 21

Amdahl Corporation, 1250 East Arques Avenue, Sunnyvale, California 94086.
We are an equal opportunity employer.

What truly is natural?

To the editor:

What are the limitations of a garden planter?

A planter is a container used for growing plants. It is designed to provide a variety of plants with the necessary nutrients, water, and air to support healthy growth. The limitations of a garden planter depend on various factors such as the type of plant, the soil, and the climate.

For example, a small planter may not be sufficient for plants that require substantial space, such as trees or large shrubs. Similarly, a planter in a dry location may not be able to provide enough water for plants that require frequent watering.

Another limitation of a garden planter is its ability to support different types of plants. Some plants may require specific growing conditions, such as a warm or cool climate, or a specific amount of sunlight, which may not be available in a garden planter.

Overall, the limitations of a garden planter are determined by the specific needs of the plants being grown. It is important to consider these limitations when selecting a garden planter to ensure that the plants will thrive.
Art Blakey's jazz message

By Doug Klapper

Art Blakey and the Jazz Messengers were in full swing last Wednesday with a standing-room only audience at Jonathan Swift's. The crowd settled down as the ligh dimmed and drummer Art Blakey approached the microphone. "We ask you to be as quiet as possible," he whispered. "...we want you to get every sound that comes off this stage."

The advice was good. The band, delivered some fantastic music that the cultured ear recognizes as a cross between mainstream and the modern VSOP recordings.

This is why Blakey is unique. He has never sacrificed the high-energy and off-beat accenting of his Hard Bop revolutionary days, yet he allows his horn players enough freedom to carry him into the modern age.

As Miles Davis put it, "If Art Blakey is old-fashioned, then I'm white." The modern sound of the horns was most elegantly expressed by tenorman David Schnitter. His melodic control and four-note chromatic patterns were reminiscent of John Coltrane's style.

Alto saxist Bobby Watson was well received by a tolerant audience. Though he flew through harmonically active passages with a clear and firm tone he was rarely able to stay on top of Blakey's very fast tempo.

The rhythm section, pianist Jimmy Williams and bassist Donnie Iris, was the core of Blakey's success. Not only did they consistently hold the tempo but where the other players bumbled on the incomprehensible they presented a welcome display of traditional post-bop improvisation.

Perhaps the only disappointment was trumpeter Valeri Ponomarev. Rhythmically he captured that bitter yet swinging modern idiom, but melodically he fell short.

Blakey, faces this risk. He has always used his band to introduce starting musicians. Usually he acquires winners such as Lee Morgan, Wayne Shorter and Sonny Rollins, but once in a while a Provenance must surface.

Music was not the only message Blakey delivered. A serious tone dominated his mood during his closing statements. He spoke of jazz as being a "true American art form."

He expressed concern about the weak public support jazz is receiving, and warned that this country is experiencing an exodus of jazz musicians who are finding European audiences more appreciative.

His concern is not unwarranted, but jazz is still quite prevalent in this area. If you want information on what is happening you can call the Jazzy Horline: 262-1290.

Computer Science, Engineer, Math & Physics MAJORS

Develop YOUR Potential

LOGICON's name is synonymous with technical excellence. We are a recognized leader in engineering and computer science fields of software reliability, fault tolerance, guidance & controls, simulation, and application systems.

In addition to technical excellence, LOGICON has a small-company environment that is ideal for developing your potential. We can offer you...

CHALLENGE... LOGICON's advanced applications require creative and original solutions to challenging technical problems.

VARIETY... LOGICON has built a solid base of diverse, medium sized contracts which prevents stagnation and develops new technical skills.

RECOGNITION... LOGICON lacks the multipi-tiered, rigid management structures of larger corporations so accomplishments are noticed, appreciated and rewarded.

GROWTH... LOGICON has a steady growth pattern that provides stability while riding economic tides for our staff to expand their professional horizons.

LOGICON will be on your campus

Tuesday, February 6

AN EQUAL OPPORTUNITY EMPLOYER M/F
Radio no go on local music

By Claudia Perry

Boston radio stations for the most part are indifferent to the local musicians that depend on them for exposure. Only WCBN and WBCN make any effort to play music by local bands. On the basis of WCBN's airplay, the Pousette-Dart band was able to sign with Capitol Records. The Cars signed with Elektra after their demo tape of "You're Just What I Needed" received considerable airplay on WBCN.

Randi Kirshbaum, weekend voice on WBCN and familiar to Washington DC's fertile local music scene, told The Tech that the interaction between clubs, bands, and radio stations works as well as it can in a market as large as Boston. "Washington DC is an exception," she said, "and the station I worked for (WHFS) was an exception to the Washington market. WHFS' audience was small but loyal to the station and its advertisers."

Kirshbaum added that WBCN is the only FM album-oriented station that plays local music as part of its regular programming. Bands like Human Sexual Response, the Marshalls and the Real Kids have been played on WBCN and reflect the listening audience's taste. Kirshbaum said that she doubted that WBCN would play much local folk and blues to New Wave. "These factors are the playing music by local bands is very simple. The tapes have to be of good quality and appeal to our audience, which favors mostly rock 'n' roll and New Wave."

Some local music fans, there is an outlet for local folk and blues. WCAS, a daylight AM station in Cambridge, plays folk and blues regularly. Unfortunately they are hindered by their low wattage and on-air hours from reaching a larger audience.

W3CNP's and WCAS' efforts comprise most of Boston's local music on the radio. WCBO plays local music every Sunday at midnight. The time slot and the separation of local music from their regular programming makes the Boston Beat easy to avoid. WTBS also plays local music. They too are a low-wattage station and reach few people.

Since the Boston radio audience favors New Wave and rock 'n' roll, it makes sense that most of the stations that play local music play these types of music. Washington also caters to the majority. Most DC local music fans prefer bluegrass and blues to New Wave. Kirshbaum told The Tech that there is little crossover in both markets. "Most of the people that listen to blues in Boston," she said, "probably don't listen to New Wave."

WBCN recently reaffirmed their commitment to local music. This Sunday the popular Boston Sunday Review will be devoted to a discussion of the local music scene with two area patriarchs, Luna and James Montgomery. Most stations probably wouldn't risk losing a large audience by doing a show like this but WBCN has been consistently refreshing with its programming style.

The fact that doing a show on two local bands is a gamble raises questions as to what radio stations are trying to do for their audience. Should a station try to help local artists or just play all the hits all the time? Some, like WCBN and WCAS do both with some success. But stations like those are exceptions here or anywhere.

Accept The Rockwell Electronics Challenge!

When it comes to Electronics, Rockwell goes across the board. As a recognized world leader in sophisticated electronic components, products and systems, we span the gears covering a vast spectrum of business activities, information technology applications, aerospace, defense, electronics integration, and electronic devices.

Rockwell offers hundreds of career choices in a number of disciplines. If you're an EE, MF, EN, Math, or Computer Science major, we invite you to accept the Rockwell challenge. Contact your placement office today for an immediate interview.

Hillel wins College Bowl

(Continued from page 1) Lincoln Lab staff member Kenneth D. Wickwire, as well as Reis. Hillel and Gallin Nevada became the third and fourth place qualifiers for Thursday's playoffs, behind Heirs of Chambery and Croatoan, in a preliminary written exam entered by 58 MIT teams. In the semifinals, Hillel upset Heirs of Chambery 310-195 and Gallin Nevada shocked Croatoan 310-195 to surge into the finals. Said Alexander dryly, looking askance after Hillel's triumph, "We did this by hard work." He then declared, "Actually, the way we did this was by not worrying about it."

Nussbaum and Stiel were on a Hillel team two years ago that won the MIT Championship. Last year's MIT Champion was Russian House, led by Steve Karel '81, the highest scoring individual in the preliminary exam last year and this year.

State told The Tech Monday, "We were planning to look at the tapes of previous MIT finals, which are in Barker [Engineering Library]," in preparation for the regionals. The defending Region 3 Champion is Yale; the defending National Champion is Stanford.

An invitation from IBM to disc. n s your career.

FRIDAY, FEBRUARY 16, at the M.I.T. Placement Office.

If you are thinking about a career in engineering, computer science or sales/marketing, IBM is certainly one company you should consider.

IBM provides a uniquely creative environment in which talented people are encouraged to accept the challenge and responsibility offered by one of the prime growth industries: information technology.

We can offer you a remarkable variety of career opportunities in many areas. Come and talk with us. We'll be interviewing at M.I.T. all day, February 16. The Placement Office will be happy to set up your appointment.

In the meantime, if you would like to know more about us and the many opportunities we offer, our career brochures are available at the Placement Office.

CORNING
Fencers foil foes

By Amelia Phillips

Editor's note: Amelia Phillips is a member of the women's fencing team.

Friday afternoon found the women's fencing team in good physical condition, but low spirits. Most of the varsity went to face their opponent with the same chocked up feeling many freshmen get when they take their women's fencing team. in good a member of the women's fencing team began its four-way meet. (Photo by Steven Solnick)

Susie Hirschman '82 (right), a member of the women's JV fencing team, stumped Baruch College by a score of 13 to 2. The next fencing match will be on Saturday, February 3rd against Rhode Island College and the University of Rhode Island at URI, followed on Wednesday the 7th by a meet against Concord Carlisle and on Thursday against Brown University, both away.

Begin Your Engineering Career at

American Can

American Can is one of the top 100 companies in the nation. We are a diversified, international, consumer-oriented corporation.

We have opportunities for engineering graduates in Research and Development, Manufacturing Operations, and Computer Systems. We're into earth sciences. Mining and milling and grass to more advanced engineering and modern manufacturing engineering at one of our plants.

Individual development programs offer you an opportunity to learn through "hands on" involvement in either project engineering at one of our technical centers or manufacturing engineering at one of our plant locations. After completing the program, your career can progress in a broad range of engineering positions.

We are interested in ME, EE, and Chem E, especially if you have sources in computer science or systems engineering.

Make a date to see our representative on campus or write College Relations, P.O. Box 349, American Can Company, Greenwich, Conn. 06830. Our representative will be at your College February 17, 1979.

Chevron Recruiters visit this campus Feb. 21 - 23

PHYSICS/CHEMISTRY/MATH
ENGINEERING MAJORS

In the field of energy generation, Nuclear Power is a potentially the best alternative to our nation’s future needs. If you are a recent college graduate or just approaching graduation in a technical major and have maintained a degree of academic excellence, you may qualify for a rewarding and challenging career in Nuclear Power with unlimited advancement opportunity and unusually attractive benefits including:

- Scholarship of $500/month during senior year
- Starting salary of $11,500; increases to $24,000 in 4 years
- Free medical, dental care
- 30 days paid vacation annually
- 1 year graduate level training in nuclear engineering
- Excellent retirement plan

Mountaineering #1.

FUNDAMENTALS OF MOUNTAINEERING

What is mountaineering all about? Funny you should ask. Because we just happen to have an answer. (Ah-h, life's little coincidences.) Mountaineering is a skill, a science and an art. Yet anyone with a thirst for excellence and normally developed motor skills can master it. Simply study these fundamentals and follow them faithfully.

1. Step one, appropriately enough, starts by selecting the correct site. To do so, pick up a bottle of Busch. This is commonly called heading for the mountains.

2. Okay, here's where the fun begins. Hold the mountain firmly in your left hand, grasp the mountain top with your right hand and twist the little fella off. There you go.

3. Now for the tricky part. Neophytes, listen up: the proper pour is straight down the center of the glass. Only in this way will the cold, invigorating taste of the mountain come to a head.

4. Once poured, pacing becomes paramount. As any seasoned mountaineer will tell you, the only way to down a mountain is slowly, smoothly and steadily—savoring every swallow of the brew that is Busch. If you're a bit awkward at first, don't be discouraged. Perfection takes practice. Soon enough, having emptied your glass and filled your soul, you too will be a mountaineer.

Fig. 1 Before Mountaineering  Fig. 2 During Mountaineering  Fig. 3 After Mountaineering

Don't just reach for a beer. Head for the mountains.
By Rich Aucis

Gymnasts triumph

The MIT women’s gymnastics team evened its record at 1-1 last Tuesday via a 78.7-69.9 victory over Bridgewater State. The squad recovered from a 100.3-76.35 defeat at the hands of Dartmouth the previous Saturday.

Elaine Sears ’79 registered the high score for the meet in both vaulting and parallel bars. Her average for two vaults was 7.4 and her brilliant performance on the parallel bars earned a score of 7.1. Wendy Myers ’81 and Cindy Reedy ’80 also vaulted well and received scores of 6.7 and 6.1 respectively.

Myers passed MIT in the last two events. She netted a 5.7 on the balance beam and a 7.0 on an excellent routine in floor exercises. Captain Mary Beth Ward ’79 gave a solid all-around performance and chalked up a 5.6 on the balance beam.

Coach Linda Lastoch was very pleased with the team’s performance in the first two meets. The team is young, spirited, and hard-working. Many freshmen are members of the varsity team and interest in the sport is running high. It should also be noted that the team is without services of All-American Leslie Harris ’81, due to return soon from a layoff caused by an ankle injury.

Both men’s and women’s teams competed at Yale this Sunday. The next home meet for the women is Saturday, February 10, vs. Northeastern and Plymouth State.

We manufacture and market the most comprehensive range of products and processes for the analysis and prevention of wear in mechanical parts. A field with almost-incalculable potential, we have pioneered. Protective Maintenance in 160 countries and territories and established unique performance records.

But our processes and products have to be applied with real expertise if they are to meet customers’ real needs. They need to be properly explained to engineers by engineers. We are ready to offer business-minded engineers not just a job, but a challenging career in an exciting field. Instead of dealing with just one firm, you will have the opportunity to expand your activities to many plants and industries around the world. The potential for professional advancement and personal growth is great, with overseas assignments possible.

How do you rate your skills in:

- a. Initiative and decision making
- b. Inventiveness
- c. Meeting and helping people
- d. Lecturing/training
- e. Leadership/motivating other people

If you rate yourself as excellent in most of these areas, we want to talk to you. We are offering a very attractive salary with incentives and a generous car allowance, a group health insurance package and assistance in relocation where appropriate. Plus the satisfaction of helping save money for industry and priceless natural resources for us all.

**SOPHOMORES JUNIORS**

Ever Thought You’d Like to Fly?

If you seek to explore the limits of time and space, then Naval Aviation could be the means to launch your journey. By the time you qualify to wear naval aviator’s wings, you will have faced and conquered challenges that come only once in a lifetime for a few very special people.

If you are a college sophomore or junior with above-average health, intelligence, stamina, and 20/20 correctable vision, you can be guaranteed flight training upon graduation with an additional salary benefit. This program allows you to step into a good paying, exciting job immediately following graduation—a job that you began training for (with pay) during the summer vacation between your junior and senior year, without obligation or interruption to your studies. It’s the best of both worlds—preparing for two careers at the same time.

If you really would rather be flying, call or write:

Handball demo held

By Rich Auchus

The MIT community enjoyed a unique introduction to the sport of team handball last Wednesday evening. Dr. Peter Buehning, president of the US Team Handball Federation and the recipient of a masters degree in mechanical engineering from MIT in 1954, began the program by introducing seven members of both the US men's and women's Olympic teams.

Buehning spent several years in Germany, where he learned the sport. He is credited with introducing the sport to the USA and with pioneering its development. Buehning explained the rules, mechanics, and strategies of the game, and the team members demonstrated the various offensive and defensive positions. An exhibition game between the team members followed, and MIT students were then invited to participate.

Skaters win seventh

By Lou Odette

Editor's note: Lou Odette is a member of the MIT hockey team.

MIT hockey overcame a three goal deficit Saturday night to beat Bates, 5-2, and stretch its winning streak to six. Dave Tohir '79, Darl Dopart '79, and Regge Metnor '81 were standouts for MIT, with Tohir collecting two points and two assists.

Bates drew first blood but Dopart scored MIT's first goal early in the opening period to even the score. Bates pulled away to a 4-1 lead with two more goals in the first period and one early in the second. It was a goal by Tohir from Dopart that signalled the comeback, as MIT continued to press the Bates defense, with forechecker Frank Scarabino leading the charge.

Defenceman Matt Neville G, who had been out for ten days with a head injury, scored on the power play to pull MIT to within one. The Engineers tied it at four with a goal by Tohir from Dopart and Metnor and then played all of the third period without the penalty man.

For a while it looked as if Al Strong '80, who has been averaging three points a game, wasn't going to make it, but two minutes into the third period he put the winner into the top corner of the net.

Bates made a bid to get back into the game in man-up situations but without success, as the Engineers demonstrated their oft-used talent for killing power plays. The win improved MIT's record to 7-2.

Earlier in the week MIT defeated Suffolk 5-2, MIT took the lead early and maintained it on strong efforts by Royce Barones '81 and Bob Bayer G. With two minutes remaining, the officials ended the game, which they were no longer able to control. In fact, with half of each team in the penalty box, given two minutes there might not have been anyone left to play.

MIT's goals were scored by Matt Neville G, Rick Bryant '79, and Duane Horton '81 with Al Strong '80 collecting two. MIT plays Stonehill 7:00pro Friday night at the skating rink.
