WITH the completion of the Editorial Board of the Ninety-Six "Technique," the work upon the coming Junior Annual has been fairly launched. The choice of candidates has been a fortunate one, and a congenial staff has been elected, composed of men of experience and ability, who are enthusiastic in the work. The selection of Mr. Hurd as Editor-in-Chief will, doubtless, be received with interest by almost everyone at Technology. While he has seen but little training, the position will be well filled.

It is hoped that the honor which is brought to Technology by the production of an annual which is not excelled by our sister colleges, will lead to a lively participation from the student-body, regardless of class feeling. Experience has shown that, however persistent are the efforts of the immediate board of editors and of the artistic staff, no annual has been successful without the help of numerous outside suggestions and contributions for every department. The past term has been peculiarly productive of material of interest to a "Technique" Board. Let upper and lower classmen alike begin to collect the necessary grinds and to hand in the requisite designs. It is for the honor of Technology as a whole that the coming annual should be heartily supported.

EVIDENTLY the students appreciate the efforts of The Tech in providing for them a table in the library where they may enjoy the best college papers in the country; but when certain ones become so absorbingly interested in the perusal of the exchanges that they forget to return them, it becomes necessary to remonstrate both in the interests of the other students and of The Tech.

Recently several of the best exchanges have disappeared, and unless the students restrain their enthusiasm for college literature before it leads them to such—to say the least—thoughtless abuses of privilege, it will be necessary to take away the table altogether.

HIS year, for the first time in the history of Technology, the annual prize drill of the cadet battalion is to be omitted. The decision by the Faculty to hold the drill was recently reversed at the request of Lieutenant Hawthorne, who reported that the last few drills had been so unsatisfactory, and the lack of interest so apparent, that the omission of the drill would be highly advisable. Instead of the prize drill there will be a purely formal inspection of the battalion by the Inspector-General of the Department of the East, though it is likely that the general idea of the programme as announced will be carried out, with the exception that no prizes will be awarded. This, with the recent decision of the Freshman Class not to hold a dance after the drill, will tend to make the entire affair far different from the enjoyable drills of past years, and many will regret that matters are in such a state as to prevent the usual pleasant termination to a year's work in the drill hall.

AT the coming Intercollegiate Championships on May twenty-third, Technology should certainly make an excellent showing. Since we entered the Association there has been a noticeable increase of interest shown by our athletes. A close contest among Amherst, Brown, Dartmouth, and Technology will be the result. All who are able should take advantage of the special rates made by the B. and A., to go to Worcester and support the large delegation of wearers of the red and gray, who will certainly be a credit to Technology.

THE TECH is glad to announce that the special issue of a Class-Day number is now assured. This number will be an especially entertaining one, and will contain matter of interest both to the undergraduates and to those who are soon to be alumni. In addition to the verbatim reports of the Baccalaureate Sermon and the speeches of the
