A meeting of the Ninety-Six Class Day Committee was held on Monday, February 24th, for the purpose of organization. Mr. Hurd was made permanent chairman, Mr. Trout, Secretary, and Mr. Manahan, Treasurer. After some discussion, it was resolved that the office of Treasurer should be placed under a bond of two thousand dollars, his accounts to be controlled by the auditors, who shall report to the Class-day Committee every four weeks, the Treasurer making a complete report of all moneys received and expended at each weekly meeting. The following committees were chosen: On Class-day Exercises, Messrs. Hurd, Ames, Rockwell; on Class-day Assembly, Messrs. Ames, Guptill, Thompson; on Entertainment, Messrs. Thompson, Tilley, Locke; on Graduation Exercises, Messrs. Leighton, Locke, Crane; on Baccalaureate Sermon, Messrs. Rockwell, Merrell, Hyde; on Printing and Engraving, Messrs. Hyde, Manahan, Crane; on Decorations, Messrs. Driscoll, Trout, Crane; on Auditors, Messrs. Merrell, Smyse; on Class Day Committee Funds, the chairmen of the several committees.

Professor Mendenhall, President of W. P. I., and formerly head of the United States Coast Survey, lectured before the Society of Arts last Thursday on The Alaska and Northeastern Boundary Line Disputes with England. In his lecture he showed very plainly that a long intimacy on his part with the question of our boundaries has given him a wholesome love of justice, and a firm belief in traditionary prerogatives where a boundary line is concerned. Aside from his scientific treatise, he manifested some personal opinions in very positive statements that indicate how deeply he has had the question at heart. "Disputes about boundary lines should not always be settled by arbitration, which too often results in compromise rather than justice." The doctor holds that diplomats should not be allowed to take upon themselves the establishment of lines which involve international interests, but that men scientifically trained for such work should be chosen; and, furthermore, that the treaty itself should be couched in such terms that intelligent people can at any time understand exactly the purpose of the agreement. The privilege of hearing such men as Dr. Mendenhall is one of incalculable value to scientific students.

Alumni Notes.

The annual dinner of the Class of '94 was held on Friday of last week.

Latimer W. Ballou, '95, now of the Cornell Law School, visited the Institute a few days ago.

One of the first Roentgen photographs received in this country was sent to Professor Sedgwick by A. P. Mathews, '92, who is now studying at Marburg.

Mr. Francis C. Green, Course XI., '95, was in town last week. He is now an assistant in the office of Rudolph Hering, one of New York's foremost Sanitary Engineers.

At the recent dinner of the North Western Association of the M. I. T., the topic for after-dinner discussion was "Recollections of my life at Tech." Twenty-six men, representing thirteen classes, participated in the dinner.

The exhibit of the Institute has been returned from Atlanta in good order. It was stored in the Massachusetts building, and consisted principally of photographs of the buildings and books relating to the courses here. The attendant had some considerable difficulty in preventing the "crackers" from carrying away these photographs to decorate their rooms. A great many graduates visited the exhibit, and the subject of a Southern Alumni Association, with headquarters at Atlanta was broached.
