have a regular course in the gymnasium, each man following an individual prescription of exercise by the physical director.

This is just the plan which the Committee on Gymnastics has now under consideration, and which we hope to see carried out at Technology.

"Technique" Ninety-eight.
(By our Ninety-seven Correspondent.)

By the courtesy of the editors of "Technique" Ninety-eight who, several days ago, placed in our hands a copy of the Annual fresh from the press, we are able to give our readers a review of the book in this issue.

Since the appearance of "Technique" Ninety-five which, if it did not mark ours as the typical College Annual of the country, certainly placed it in the foremost rank, there has been no rapid advance in literary or artistic excellence on the part of succeeding editors, and superiority has only been attained through conscientious work and study, and careful regard for details.

The Ninety-eight editors have evidently recognized this and have especially devoted themselves to securing the greatest possible accuracy in statistical matter and the best of all that is witty; and in these ends they have met with surpassing success.

"Technique" as it comes to us this year presents at the outset its only radical departure from former volumes—it is bound in leather. While we regret that the Board, in order to accomplish this, found it necessary to advance the price of the book in the face of the example set by the business management of Ninety-seven in showing that an attractive and satisfactory binding could be still obtained for one dollar, we must concede that the change adds materially to the finish of the edition.

The book is fittingly dedicated to the memory of our late President, and for this, the excellent photogravure of the General, and the masterly account of his life, the Board will have the gratitude of every friend of Technology.

We have again been given a frontispiece, and this time, though simpler, it compares very favorably with that of Ninety-five.

The photographs of the Faculty, while hardly as well arranged as of late, are faithful likenesses, and the accompanying letterpress is fully up to the standard.

A happy feature of the book is the new departure in the matter of class histories, and great praise is due the Board for its success in affording relief from what, in the past, bid fair to become monotonous.

The reproduction of the class group, though its key may be better, is not as satisfactory as in former years.

There is a great deal of meritorious and enviable artistic work shown in the panels and "head" and "tail" pieces which are scattered through the pages devoted to athletics, musical clubs, and societies, and these, together with the introduction of reproduced "snap shots," command more attention than ever.

The Department of Athletics is, as usual, well handled, good use having been made of the greater space given to it; and the Grinds, while more daring and severe than those of recent years, are extremely clever and original.

The Quotations are more numerous than in the past, and some of them are quite out of the beaten path and are very apropos.

Two new features have been introduced into the Statistics: a table of the salaries of graduates, and one of the required hours of preparation and recitation in the various courses during the four years. These added to the extended College Statistics make this department unusually interesting.

The number of advertisers is larger than ever, and their contributions make an attractive display.

It cannot be said that the average of the artistic work is higher than that of last year,
