'94. The Class of '94 has recently published a Class Book. It was the intention of the editors to make it a Graduate "Technique," embellished with drawings, bound in cloth, and including many features of interest to the Class. This was found to be impossible, owing to the expense, but instead they have issued a neatly printed volume of one hundred pages, bound in paper covers. It represents the Class history from the time of "Technique" '94, and interesting statistics of the Class are given, with comments by the editors. These include the record of each man in the Class since he left the Institute, the matrimonial ventures, "etc." It is worthy of note that a poll of the Class showed that the average salary was $1,266 per year, against $1,200, the sum named by "Technique" '98. The main part of the book is called "Toasts." In it a large number of letters from members of the Class are reproduced. They usually deal with a subject with which the graduate has been associated since leaving M. I. T. Most of them are quite amusing. As a whole, the book is an admirable production. The Committee was Messrs. Walter E. Piper and George W. Sherman.

'97. Mr. E. P. Osgood, Course XI., is Inspector and Junior Engineer on the fortifications for the defence of Key West.

'97. Mr. Oren B. Smith, Course III., has recently become superintendent of a mine in the wilds of British Columbia.

'97. Mr. Thurlow Washburn, Course III., is prospecting near Grafton, New Mexico.

A new discus has been purchased for the gymnasium, and the new floor is entirely finished.

The cross-country run last Saturday was omitted on account of the rain. It is hoped that the men did not omit their training for the Coolidge's Corner run.

A large attendance is desired at the games on Friday evening. The Advisory Council should find enthusiastic support as it enters into its labors for our athletic welfare. It is expected that the graduate as well as the undergraduate members of the Council will be present.

The work in the compulsory course of Freshman gymnastics at Yale has been put to a strong test during the past months, and the scheme has proved itself a very practicable one. The work has been decidedly progressive, and the results very gratifying to the instructors in charge. The course has been relieved of monotony as far as possible by a change of work every two or three weeks.

The Executive Committee of the I. A. A. A. met in the New Haven House at New Haven, Saturday afternoon, to hear the reply of Cambridge University in regard to the challenge sent by the American colleges in regard to an international collegiate field meet. The substance of the reply was practically the same as that received from Oxford, Cambridge refusing on the ground that the status of the English athletes as amateurs was above suspicion, while that of the athletes in many of the American colleges was questionable.
