football has been the great obstacle in the way of success during the past two years. But with the assistance of a small but loyal body of our undergraduates, Technology was able last year to make a really creditable record both in football and track athletics. This season we have an eleven that has lost but one of the four games played, and we have in Mr. Locke a coach who has shown himself able to give us a winning team, but we have not thus far supported our representatives in a way that could reasonably be expected from a college of a quarter of the size of the Institute. We saw this Saturday, when there were hardly men enough present at the first home game of the season to give the Technology yell. It is not the fault of our teams that they sometimes lose. The fault lies rather with the great body of undergraduates who show absolutely no interest in the men that would, with a little support, place us in athletics at the head of the New England colleges. It is time this was realized and the blame for some of our past failures put where it belongs.

The Meeting of the Association of Class Secretaries.

On the evening of October 17th, the Association of Secretaries of the graduate classes enjoyed a dinner at the Technology Club, and afterwards held a business meeting, the proceedings of which are fraught with interest to each and every Institute man. Dr. H. W. Tyler, '84, presided. Mr. W. B. Snow, '82, was elected Secretary, and Mr. F. H. Fay, '93, Assistant Secretary,—both for a term of two years. Methods of making up a complete list of all past students of the Institute, and keeping the list up to date, were discussed, as were also the finances and other matters of the Association.

The chief interest of the evening centered in the report, with recommendations, presented by the chairman (Mr. A. D. Little, '85) of the committee in charge of publishing a quarterly magazine, devoted to the doings of the Alumni socially, politically, and professionally, and the interests of Technology everywhere. This idea was first brought up at a meeting of the Class Secretaries' Association early last spring, and a committee was appointed with power to take the necessary steps to publish it. The result of the work of that committee since then is shown in the leading features of its reports, quoted from in the following:—

The Technology Review will appear on Dec. 20, 1898, the first number to be dated Jan. 1, 1899, and to be issued quarterly. A classically simple design for the cover, an issue of eighty pages, at least, of reading matter, and all the advertisements which can be secured, constitute the form. Its contents will include: A frontispiece of President Crafts, accompanied by a biographical sketch; an account of recent research, by a Technology man; notices of recent books; a full page drawing by Burgess; a page devoted to the undergraduate happenings, to be divided between the Societies and the general student body; a full description and drawings of the new building; a page of athletics; and, chief of all, two or more pages devoted to news of similar nature to that contained in the “Alumni Notes” now published in The Tech. These “notes” will be very numerous and complete, as the Class Secretaries have their combined wide personal acquaintance to draw upon for copy.

The financial success of The Review is assured, over $1,600 of advertising having been secured toward the estimated yearly expense of $2,500. A feature of the advertising will be a list of professional “cards” of Institute men only, to cost $10 for a year's insertion.

The committee expect to reach a paid circulation of a thousand, at a yearly subscription price of one dollar, or twenty-five cents each for the four numbers.
