The Diamond "S" Brake Shoe,
The Most Efficient Brakeshoe for all classes of Railway Service.

The Diamond "S"
Is the result of careful investigation of the conditions of Brake Service and constant endeavor to produce a uniform combination of metals, which, while retaining the frictional effect of unchilled Cast Iron, has a tough and bonded structure, to resist wear and produce greater endurance in the shoe without injurious effect on the wheel.

<§> Holds Fast, Wears Well, and is Strong. <§>
