eleven men are on clover field, and by half-past five, it is too dark to see. The team is absurdly weak in those elementary principles which should have been instilled during the first week of practice. Outside of the quarterback, not a man on the team seems capable of making two clean tackles in a single game. Several of the men do not appear to know their positions, and of interference, the team is entirely innocent. Even the signal practice at the Gym. is rendered ridiculous by the fumbling and misunderstanding of signals.

There is one step which the management should take immediately. They should require the coach to put on football clothes and give the team some practical lessons. Successful coaching has never been done by "lectures" at any other college, and there is no reason to suppose that it will be at Technology.

The team has had five weeks of this kind of coaching now, and the results indicate that something more is needed. It is imperative that the team should take a decided brace if the little football interest still left in the school is to be kept alive.

The poor weather conditions, small attendance and general lack of enthusiasm on the part of the students, there was small incentive to spur the contestants in Saturday's handicap games to anything like championship form. It was, however, gratifying to notice the number of new men in 1901 and 1902 especially who showed up well not so much on account of their condition but rather on their nerve alone.

We must repeat our time-worn plea that if Technology athletics are to be successful there must be more support on the part of the students in general. Those men who spend their time and energy in endeavoring to place the Red and Gray in its rightful position certainly deserve more enthusiastic support on the part of their fellows. We should at least lend the encouragement of our presence at the games.

Association of Graduate Class Secretaries.

The first regular meeting for the present year of the Association of Class Secretaries was held at the Technology Club on Tuesday evening, October 17. A large proportion of classes was represented.

A. D. Little of the editorial committee of the Technology Review submitted a report, which showed that the magazine had been even more successful than the committee had anticipated. Most encouraging letters had been received from subscribers and institutions and schools to which the Review had been sent. Owing to the many unusual expenditures incident upon starting a new publication, there is a slight deficit, but indications for the future warrant the continuance of the magazine.

In order to obtain more graduate news and to bring the Review into closer touch with Alumni, circulars are to be sent to all graduates by the class secretaries. Efforts are to be made to secure more advertisers.

Complete sets of directories of all classes are being completed and will be placed on file at the Institute, at the Technology Club, and with the Secretary of the Association of Class Secretaries.

With Apologies to a Popular Air.

With apologies to a popular air,
It was brewed in old Kentucky,
Brewed in very quiet stills:
There's the sunshine of the country
In its sparkle as it spills.
It was brewed in old Kentucky,
Take it, boy, you're mighty lucky
When you're drinking the moonshine of the hills.

—Ex.
