Technology, and particularly to those who took part in the Cane Rush, that these statements be retracted; and

Whereas, The student body resents most deeply the sentiments expressed in the editorial columns of the Post of the issue of November 17th; be it

Resolved, That these resolutions be delivered to the managing editor of the Boston Post, with the request that he have them published in the Post in a prominent place in the issue of Monday, November 19th, 1900, as a means of retraction.

Signed by Institute Committee — E. F. Lawrence, '01; F. D. Rash, '01; P. G. L. Hilken, '01; L. S. Cates, '02; J. C. Fruit, '02; I. R. Adams, '02; R. M. Field, '03; C. J. McIntosh, '03; P. R. Parker, '03; C. L. Homer, '04; A. W. Rowe, '01, member-at-large.

Harold W. Sherrill, a member of the freshman class, who was carried from the field in an unconscious condition on the afternoon of the cane rush, was at first found to be in a very serious condition but the physician who has been attending him now states that he has successfully passed the danger point and will probably recover fully.

When examined Sherrill was found to have been attacked with a hemorrhage of both eyes, especially bad in the left one, and to be suffering from enlargement of the heart. His accidents were due to the strain received in the rush, caused by prolonged holding of his breath and by external pressure of the crowd above and around him.

He was standing beside Moore on the cane. When the crowd in the centre of the rush fell, he tumbled on his side, and thus avoided the fatal results that might have occurred had he fallen on his back as Moore did.

He is now confined in a dark room, his eyes bandaged with black cloth. It is thought that he will be back at the Institute within ten days, but he will be unable to take part in any laborious or athletic work for at least a year.

Europe Ten Years After.

"Graduate Work in Germany" was so ably discussed by Dr. Wendell in a recent number of THE TECH that it seems almost superfluous to take it up again; however, by looking at the subject from a somewhat different standpoint, and especially by virtue of viewing it through the vista of ten intervening years, it may be possible to render some little assistance to the increasing number of Institute graduates who continue their studies abroad. It is not my purpose to touch upon all the impressions that are left after the lapse of time, not even upon all the larger and deeper ones, but rather to select two or three which specially appeal to me. Nor should it be forgotten that no two persons, whether pursuing different studies or the same study, will exactly agree upon the permanent results secured or the proper plan to follow. Each man's testimony must be accepted with due reference to the personal equation.

In the first place, the majority of American students in Europe will doubtless in the future, as has been
