SHOW GOING TO PROVIDENCE.

Management Adds Performance to Usual Number.
Boston and Malden Plays As Usual.

TO HOLD MORE MEETINGS.

The Glee Club Decides to Hold Debates Twice a Month.

The Technology Civic Club held a meeting at the Union last Monday evening and it was decided to hold regular meetings twice a month instead of once a month as has hereto-fore been the custom and altogether to make the club a vital factor at the Institute. The possibilities of hav- ing a debate with the Walker Club were discussed, as well as the advis-ability of joining the Intercollegiate Bond Government Association which is being formed by the largest uni-versities in this country.

It was moved and carried that Monday's debate be postponed until the next meeting and that the Club and the Chemistry Committee select a committee of the whole to discuss and choose subjects for future de-bates. The committee will then be given authority to choose the subjects to be debated at each successive meeting in the order here indicated:

1st Meeting. Resolved, That the defects in American Municipal Government are due to our Republic-Ann Form of Government.
2d Meeting. Resolved, That the Students of the Massachusetts Institute of Technology are not fitted properly by their training for active and intelligent citizenship.
3d Meeting. Resolved, That Municipal Ownership is both possible and advisable in these United States.
4th Meeting. Resolved, That the best political developments of cities is hampered by State interference.
5th Meeting. Resolved, That a Corrupt Pratice Act similar to that now in force in Great Britain would improve the political situation in the country.
6th Meeting. Resolved, That Congress should grant subsidies to American shipowners.

The Club accepted this report without amendment, after a short discussion of the Technique '07 insert, adjourned.

CHESS MATCH.

The Technology Chess Club defeated the Andover team in the annual match played Saturday afternoon at the Boston Chess Club. Each Tech player checkmated his opponent without any great diffi-culty.

The score stood: 0

Tech: 0, Andover: 0

THE six players were:

Tech: Lange, Hunsaberg, Medlicott, F. J. Lange, and H. J. Lofting. F. J. Lange has been chosen manager and Secretary.

Lange expects to obtain several contests or matches this year and will add materially to the usual matinee performances in Bos-ton on Thursday and Friday of this week, and the regular performance in Malden, the Show this year will be given in Providence, H. L. The dates are April 26 and 27, matinees, Colonial Theatre, Bos-ton; April 27, evening, Malden Opera House; April 28, evening, Schubert Opera House, Providence.

The Show was booked for the Providence performance only after serious thought and discussion of every-thing concerned. The manage-ment believes that it is a great step in advance for the Show, and success in the undertaking seems to be assured.

The Show this year is far better than any ever played by Tech. It is a considerable departure from the shows of previous years, in that it is not an entirely stock and fanciful play such as has been produced before. The libretto and lyrics were written by George Bryant, '07, whose experience in writing "The Chemical Maid," last year's successful play, has enabled him to produce an essentially modern up-to-date play, treating of college life and college men. All vocal- ke, female features, including dances, have been omitted, and "The Freshman" approaches very nearly a profes-sional show.

There is a fine chance for good acting throughout, and the pro-
casts have taken hold of their work in a way that shows that they will not be wanting when the curtain rises. Bryant knew there was no man available to take a leading part, so there are a number of parts each of equal importance. The play is intermingled with about twenty good spicy songs that are bound to make a hit. The music is excel-lent, and was written mostly by Passow, W. G., Cobol, the usual-pot, '07. The chorus is unusually strong this year and will add materially to the success of the Show.

FRESHMAN PENCING TEAM.

Much enthusiasm marks the train-ing of the Freshman Pencing Team. The team is making very favorable progress under the care of Captain J. M. F. H. Fay, Professor and Coach Pournon. Among the men thus far reported E. H. Shiniholm, G. Weinbarg, F. J. Passow, and H. J. Lofing. J. J. Lofing and J. J. Lofing. J. J. Lofing have been chosen manager and Secretary.

The five men will be listed for some time at the end of April.

TECH GAINS POINT.

Probate Court Declares Mr. Cilley's Will Valid.

Provisionally speaking, Frank H. Cilley's will in favor of Massachu-setts Institute of Technology has been acknowledged valid. The con- testion raised by Mr. Cilley's brother was carried on by the other party, but the testator was mentally un-balanced as not allowed by the court to hear the case. The decision has been appealed, however, and the legality of the will now rests with the higher court to be delivered by a higher court.

For the present the bequest amounts to seventy thousand dollars, with the probability of twenty thousand dollars more. In case of the testator's re-covery, the bequest will be doubled.

The case was brought to the court of Probate by the estates. It was heard by the court of Probate, and the question of the will was decided.

The Probate Court decided in a strong decision that the Court of Appeals will also admit the will.

Thorough appeal to the court was made in favor of the estate. A strong indication that the Court of Probate will also admit the will.

The President then introduced Professor Thorp of the Institute. The lecture was given under the auspices of the Bowdoin Chemical Club, and was attended by a large number of stu-dents.

PROFESSOR THORP LECTURES.

Professor Thorp of the Institute delivered a very interesting lecture recently at Bowdoin College on "Borax and 'Boric Acid.'" Professor Thorp's intimate acquaintance with the subject of microscopy and textiles, which was in many ways very unconventional, Tech may look upon the money as practically at its disposal.

MR. FAY ADDRESSES C. E. S.

The Civil Engineering Society held a meeting in Ed. B. on Monday, March 12. In the absence of President Pitch the meeting was called to order by Mr. F. H. Fay, '07, who is at present the head of the Structural Department in the Boston City Engineer's office. The subject of Mr. Fay's talk was: "The Charlestown Bridge and Similar Structures." As Mr. Fay was connected with the construction of both the Charlestown and the Cambridge Bridges, his treatment of the subject was of special interest.

The lecture was copiously illustrated with lantern slides of pictures taken during the construction of the bridges.
