ELECTRICITY IN MINING.

T. W. Sprague, '87, gave the third of his series of lectures on "Electricity in Mining" Wednesday afternoon at 7 F., in 2 Rogers. He took up mining locomotives, power transmission, and the different kinds of converters and transformers commonly used in the mines. He announced that a new wire for conveying high tension currents was being made, composed of a steel core with an aluminum coating, which will provide cheaper transmission.

STEREOVISION of many different plants were shown. The views of electric mining locomotives were especially interesting, showing as they did the development of these machines from the earliest to the most approved types of the present. These lectures are open to all students, and are of general interest to all in the engineering courses.

LAST LOWELL INSTITUTE LECTURES.

The last course of the Lowell Institute Lectures is now being given by Professor Putnam upon "Nervous Diseases." These lectures are on Mondays and Thursdays and are well attended. Professor Putnam speaks in his usual charming way and treats his rather difficult subject in a very simple and straightforward manner, using few technical terms. There are to be four more lectures.

READING NOTICE.

Summer Work.—A Springfield firm has positions for Tech men, paying $2.00 per day and upwards according to ability. See A. C. Nichols, '08, at Cage any day 1:05-1:15.

INVENTOR.

The Technical Magazine for all Technology Students. Something different from all those you have seen. Instructional, and written by men of authority in their special lines. Contributors are Prof. Geo. B. Hemen, W. F. Hillebrand, F. W. Hillbrand, Analytical Chemistry, the Telfaograph, etc. 5 cts. at newstands, 50 cts. per year.

INVENTORS' EXCHANGE.
