NEW LOCATION SEEMS PROBABLE

RATHER THAN ENLARGEMENT OF PRESENT SITE.

Entering Class is the Largest on Record.

The remarks of Dean Burton at the reception to the Freshmen and new men tendered by the Technology Christian Association for the purpose of renewing the Union on the building of the Walker Memorial Building have removed conjecture as to the intention at the Institute. In his talk on general student affairs he mentioned the Tech Union, that small but mighty authority. One of Mechanical Laboratories building. He told the new men that this was merely a start, a beginning of big things, and told of the $17,000 raised by the alumni for the building of a great memorial building for teaching laboratories and common rooms.

The Dean then assured the men that this great building would be started before this year is over, and that they would have a chance to enjoy its privileges next year. He also stated that he was sorry that the wish had been felt by the Thought. The building will be started this year. In order to erect such a building the Institute would be forced either to secure a site on the annexation of the immediate vicinity of Copley square. That the former would be taken account likely, President Noyes has said that it would be almost impracticable to the latter. Other additions were made to the Institute would be a public relation affair, with the building spread over a considerable area.

The closest street car lines is another thing that is every day making it impossible to develop on the present site. It is becoming almost impossible to perform scientific work of any value because of the running trains and cars on the jelly-like soil. It is becoming also, for it is made of sand, that the Boston & Albany may build its tracks where the Brighton line now runs. It is large enough to bear the matter on the track, but it is liable to be torn out by the running trains, and it looks as if he would be able to turn out a team on as good a season as last year. Fitzgerald, who was not on the team last year, was playing the position of John Smith, was playing the fullback, and he looks as if he would be able to hold in a very creditable manner.

TUGGING HARD.

The third course will be eight lectures delivered by Vincent A. Lutoslawski, Esq., author of "The Principles of Separation: Advantages and Disadvantages," and "The Political-Religious Crisis in France." He is professor and tutor at Harvard University, care of the Institute of Technology, and his lectures will be well taken care of by Saul, who filled it so well last year.

The second course will be nine lectures by J. A. B. Pieta, Ph.D., professor of Chemistry at the University of Wisconsin, and his lectures will be well taken care of by Saul, who filled it so well last year.

The first course will be four lectures by J. A. B. Pieta, Ph.D., professor of Chemistry at the University of Wisconsin, and his lectures will be well taken care of by Saul, who filled it so well last year.
