Demand Greater Than Supply.

No Reason for Failure to Find Employment in Engineering.

In reply to a number of questions put to him by THIS TECH, Prof. Douglas D. Jackson, head of the Department of Electrical Engineering, has prepared the just-out bulletin on the subject of electrical engineering.

"In the usual call for engineering graduates which is proportionate to the number of young men who are graduating each year from the engineering schools, and especially does the demand exist for the engineering graduates who come out from the Institute of Technology. Are the opportunities for graduates from the electrical engineering course equal or superior to those graduates from other courses? Have the graduates from the Institute of Technology applied themselves to the advancement of those institutions to which they are going, with the advantages of engineering knowledge? I will answer these four queries in the order in which the reporter of the bulletin presented them to me.

"I think there can be no two sides to the statement that the diversified and really well trained young men who have gone through a course in an engineering school is greater than the supply, and that such men would be able to secure immediate employment with good prospects of ultimate professional business success. If the Institute of Technology were to graduate 50 students each year instead of approximately 250, it also seems to me that this condition is easy to continue as long as the great development of manufacturing and industrial business continues in this country. This development is more rapid in some years than in others; but there is no evidence that the sound growth of the industries will come to an end in this country for many years to come.

"I see no reason why any young man who is well trained and well educated, should fail to find advancement in the branches of engineering, and it seems to me that each student should choose his engineering course from the standpoint of his own bent of mind, and in respect to the opportunities for graduates from the electrical engineering course I am not aware why they are not as great as the opportunities for the engineering graduate at the present time is a period of tremendous growth in the lines of evolution of electricity, and such men are needed to fill the positions of engineers and draftsmen, and as managers of the electrical engineering enterprises in this country. The present condition of employment is not as favorable as it was a few years ago, but the new men are not given up. The Institute graduates capable of adequately entering the executive offices of industrial corporations also.

"The introduction of electrical invention on the line of the electric railway is beginning to show its advantages and the Institute graduates are well qualified for the work. Many of the graduates are studying advanced subjects in the schools that are well equipped for the work, and the Institute graduates are capable of successfully filling the positions of engineers and draftsmen, and as managers of the electrical engineering enterprises in this country. The present condition of employment is not as favorable as it was a few years ago, but the new men are not given up. The Institute graduates capable of adequately entering the executive offices of industrial corporations also.
