PROF. LOWELL EXPLAINS KNOTS.

Advances New Theory on Saturn's Rings.

A new theory in regard to knots on Saturn's rings has been formulated by Percival Lowell, non-resident professor of astronomy at the Institute. After close observation, Prof. Lowell has discovered that the knots are caused because some of the loose particles of matter, which massed together from the rings, are forced out of the general plane of the system by collisions with other particles.

NOTICES.
