The libraries of the Institute are larger and more complete than those of any other school of technology in the country. They contain 29,893 pamphlets and maps, 1,042 regularly subscribed periodicals and 74,685 volumes. Exclusive of any valuable gifts they represent an investment of some $160,000.

The thoroughness with which the library is stocked can be illustrated by considering the periodicals. Over three hundred of these are in foreign languages: 200 in French, 104 in German, 25 in Russian, 12 in Spanish, and 3 each in Polish, Portuguese, Turkish, South Africa, and Borneo.

DR. R. P. BIEGLOW, LIBRARIAN.

Open to all members of the Institute, the libraries of the Technological Library comprise a General Library and a Technical Departmental Library, those of Mathematics, History and Sociology, Modern Languages, Civil, Mechanical, and Sanitary Engineering, Architecture, Chemistry, Physics, Naval Architecture, Biology, and Geology. In looking for a book, if the author is known, look for his name in the card catalog. Then look for the title of the book on the shelf below. If the book is not there, ask at the card catalog, and you will be directed to the proper place.
